Alt 3-I-5	12	Rosecrans St/ Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes an exclusive southbound right-turn lane with an overlap phase, a westbound right-turn overlap phase, and an eastbound right-turn overlap phase. With the improvements proposed at this intersection, the Community Plan reports LOS E results, concluding the impact remains significant and unavoidable. With the additional traffic added by the Proposed Action alternative, the intersection continues to operate at LOS E. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 3-I-6	13	Rosecrans St/ Lytton St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes right-turn overlap phasing in the northbound, southbound, and westbound directions. A second eastbound left-turn lane is proposed. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-I-7	14	Truxtun Rd/ Lytton St/ Barnett Ave	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Constructing an eastbound dedicated right-turn lane within the existing curb-to-curb width would mitigate the impact to below a level of significance.	Yes
Alt 3-I-8	15	Midway Dr/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. From centerline to centerline, this intersection is approximately 160 feet from the Midway Drive/ Barnett Avenue intersection. The existing configuration of these two intersections are such that raised medians restrict turning movements requiring out of direction travel on Midway Drive, Barnett Avenue and Jessop Lane. The traffic added by the Proposed Action alternative to the westbound right-turning movement is substantial. Those additional trips result in a significant delay for southbound right-turns from Enterprise Street onto Midway Drive. Due to the physical constraints and irregular configuration of this intersection and its proximity to the Midway Drive/ Barnett Avenue intersection, reconstructing this intersection in combination with the Midway/ Barnett Avenue intersection into a signalized four-way intersection would be required to partially mitigate this impact. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 13–5

YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-9	18	Pacific Hwy/ Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to signalize the intersection and allow eastbound left-turn movements. With the improvements proposed at this intersection, the Community Plan reports high LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 3-I-10	19	Sports Arena Blvd/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to relocate the intersection 500 feet to the north of its current location. Improvements to realign Sports Arena Boulevard to create a right-angle with Pacific Highway are planned, as well as signalizing the intersection, providing an exclusive eastbound left-turn lane from Sports Arena Boulevard onto Pacific Highway and providing a northbound left-turn lane from Pacific Highway onto Sports Arena Boulevard. With the improvements proposed at this intersection, the Community Plan reports LOS C results. With the additional traffic added by the Proposed Action alternative, acceptable LOS operations would continue to occur. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements to mitigate the impact to below a level of significance.	Yes
Alt 3-I-11	20	Pacific Hwy/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. This intersection currently serves as an access point for the existing NAVWAR OTC Site. With future development of the Proposed Action alternative, this intersection would likely be improved to provide additional lanes entering/exiting the site. However, additional lanes would be needed on Pacific Highway. Any widening to Pacific Highway would be infeasible due to lack of right-of-way. Therefore, the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 13–5

YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-12	22	Old Town Ave/ San Diego Ave	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. The intersection is built out with regard to available right-of-way. Extra lanes on intersection approaches are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Therefore, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 3-I-13	23	Old Town Ave/ Moore St	San Diego	Per the Old Town Community Plan, improvements are recommended at this intersection. The Community Plan recommends signal phasing be changed from permissive to protected and to add exclusive left-turn lanes on Old Town Avenue approaching the intersection. However, the Community Plan concludes there is no available right-of-way to complete the improvements. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Moore Street intersection that effectively operates as the I-5 North interchange with Old Town Avenue. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-I-14	24	Hancock St/ Old Town Ave/ I-5 SB Off-Ramps	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Hancock Street intersection that effectively operates as the I-5 southbound off-ramp with Old Town Avenue and Hancock Street. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-15	25	Witherby St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to widen the northbound approach to provide one shared through/right-turn lane and one shared through/left-turn lane. With the improvements proposed at this intersection, the Community Plan reports low LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-I-16	26	Witherby St/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-17	27	Tripoli Ave/ Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-I-18	28	Noell St/ Hancock St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installing a traffic signal at this intersection would mitigate the impact to below a level of significance.	Yes
Alt 3-I-19	30	Washington St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are recommended at this intersection. The Community Plan recommends restriping the southbound approach to provide a second right-turn lane. However, the Community Plan states that the provision of the additional turn lane would eliminate heavily utilized street parking and concluded impacts to this intersection would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-20	33	Pacific Hwy/ Sassafras St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a second eastbound through lane and restriping the southbound approach to provide a left-turn lane, three through lanes, and a right-turn lane to add capacity to the intersection, though the additional capacity continued to result in LOS E operations rendering the impact not fully mitigated. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 3-I-21	34	Pacific Hwy / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the removal of a westbound through land and addition of a second eastbound left-turn lane, conversion of a southbound through lane into a second right-turn lane, and re-coordination of the signals along Laurel Street. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. Implementation of these improvements in the Airport Development Plan showed the intersection would continue to operate at poor LOS conditions rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-I-22	35	Harbor Dr / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a third eastbound left-turn lane and removal of an eastbound through lane to add capacity to the intersection, though the additional capacity continued to result in poor LOS operations rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 3-I-23	36	Pacific Hwy / Sea World Dr	San Diego	There are no planned improvements in the Mission Bay Park Master Plan at this intersection. In order to improve operations at this intersection, the Proposed Action alternative should construct an additional southbound left-turn lane from SeaWorld Drive to eastbound Pacific Highway. Implementation of this improvement would mitigate the impact to below a level of significance.	Yes
STREET SEGMENTS					
		Rosecrans Street			
Alt 3-S-1	1	Dewey Rd to Lytton St	San Diego	Per the Peninsula Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a five-lane Collector with a center left-turn lane with a LOS E capacity of 37,500 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 2,500 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-2	2	Lytton St to Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-3	3	Midway Dr to Sports Arena Blvd	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-4	4	Sports Arena Blvd to Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-5	5	E: Kurtz St to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a s four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Taylor Street			
Alt 3-S-6	9	Presidio Dr to I-8 East Ramp	San Diego	There are no planned improvements in the Old Town Community Plan along this street segment. Additional lanes are needed on Taylor Street to increase the capacity along this roadway. However, due to the historic nature of the Old Town Community, the Community Plan does not propose any road widenings or significant capacity improvements. Additionally, there is not enough right-of-way available along this segment of Taylor Street to accommodate two additional through lanes and a center median while maintaining a Class II bicycle facility. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Pacific Highway			

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-7	11	SeaWorld Dr to Taylor St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge would be infeasible. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-8	13	Kurtz St to Sports Arena Blvd	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Although the interchange project improves operations along Pacific Highway, the daily volumes on this segment of Pacific Highway would continue to exceed the capacity of the roadway. Although the interchange project improves operations along Pacific Highway, the daily volumes on this segment of Pacific Highway would continue to exceed the capacity of the roadway. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-12	17	W. Washington St to Sassafras St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Morena Boulevard			
Alt 3-S-13	19	Friars Rd to I-8	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Morena Boulevard to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge to four lanes would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Linda Vista Road			

TABLE 13–5

YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-14	20	Morena Blvd to Colusa St	San Diego	Per the Linda Vista Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Linda Vista Road currently functions as a four-lane Collector with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Road with a raised median with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Kurtz Street			
Alt 3-S-15	21	Rosecrans to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Kurtz Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Sports Arena Blvd			
Alt 3-S-16	25	Rosecrans St to Enterprise St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Sports Arena Boulevard currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Midway Drive			
Alt 3-S-17	26	East Dr to Rosecrans St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional capacity is needed on Midway Drive to improve operations along this roadway. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. Due to the lack of available right-of-way, widening the roadway to four-lane Major Arterial standards would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-18	27	Rosecrans St to Bogley Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 3-S-19	28	Bogley Dr to Barnett Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Lytton Street			
Alt 3-S-20	29	Rosecrans St to St. Charles St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Lytton Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with an LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Barnett Avenue			
Alt 3-S-21	30	St. Charles St to Henderson Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a raised median with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-22	31	Henderson Ave to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 30,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Hancock Street			
Alt 3-S-23	32	Old Town Ave to Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Hancock Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Collector with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. With the improvements proposed along this street segment, the Community Plan reports mid-LOS D results. However, the additional traffic added by the Proposed Action alternative degrades roadway operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 13–5
YEAR 2050 WITH ALTERNATIVE 3 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 3-S-24	33	Witherby St to Noell St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
		W. Washington Street			
Alt 3-S-25	37	Hancock St to W. University Ave	San Diego	There are no planned improvements in the Uptown Community Plan along this street segment. Additional lanes are needed on Washington Street to increase the capacity along this roadway. Widening this section of Washington Street requires substantial grading and filling on both sides of the roadway. On the south side, a steep grade abuts the shoulder. On the north side, a drainage ditch lies adjacent to the roadway. The physical constraints of widening this segment of Washington Street would render this impact significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
FREEWAYS					
Alt 3-F-1	2	I-5: I-8 to Old Town Ave	Caltrans	The SANDAG 2050 San Diego Forward: The Regional Plan identifies “operational improvements” along this freeway segment. The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No
Alt 3-F-7	12	I-8: I-5 to Morena Blvd	Caltrans	An Interstate 8 Corridor Study (preliminary draft dated August 2016) was jointly prepared by SANDAG and Caltrans that analyzed transportation alternatives on I-8 between Nimitz Boulevard and Lake Murray Boulevard to meet future regional and local demand. The Corridor Study recommended several improvements on I-8 within the study area that included reconfiguration of on-ramps and off-ramps at Hotel Circle North and South, Taylor Street interchange among others. The Mission Valley Community Plan also includes several new roadways such as Street J, Street U and a new freeway overpass I-8. However, while both the Corridor Study and the Mission Valley Community Plan reviewed several conceptual alternatives, both studies did not include detailed engineering feasibility drawings, cost estimates or other analyses to ultimately identify a preferred alternative or improvement. Therefore, potential and unplanned freeway improvements are not physically feasible and the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

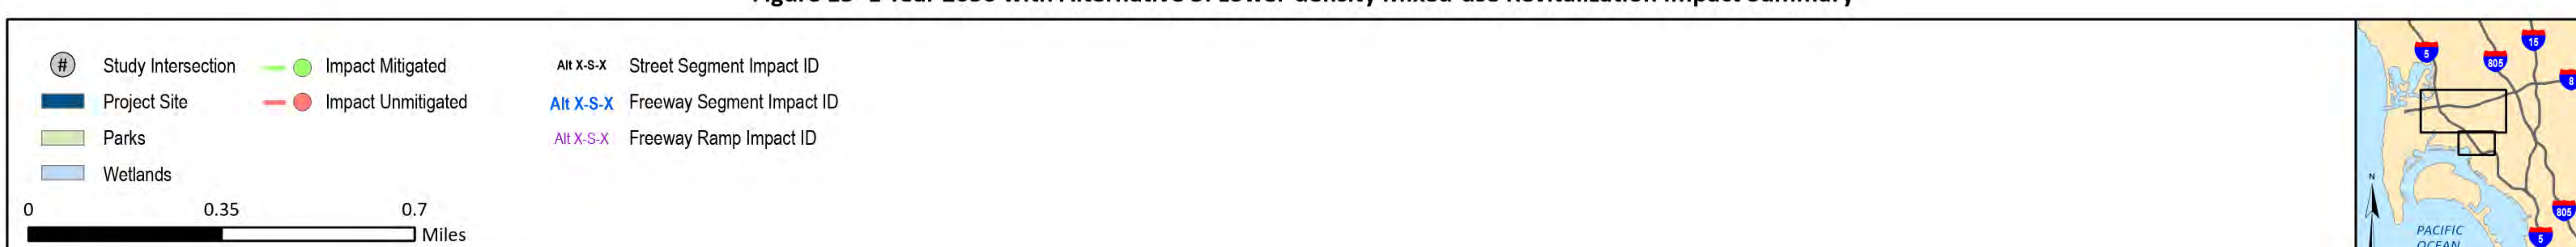
Figure 13–1 Year 2050 with Alternative 3: Lower-density Mixed-use Revitalization Impact Summary



14.0 YEAR 2050 NO-ACTION ALTERNATIVE WITH AUTOMATED PASSENGER MOVER ANALYSIS

The following section presents the analysis of study area intersections, street segments, freeway segments, and ramp meters under Year 2050 No-Action Alternative with an Automated Passenger Mover conditions.

14.1 Peak Hour Intersection Operations

Intersection capacity analyses were conducted for the study intersections under Year 2050 No-Action Alternative with Automated Passenger Mover conditions. ***Table 14–1*** reports the intersection operations during peak hour conditions. No changes to the street network over existing conditions were assumed in the analysis. The following intersections are calculated to operate at LOS E or F:

- Intersection #6 Rosecrans Street & Taylor Street / Pacific Highway – LOS F during the a.m. and p.m. peak hours
- Intersection #7. Rosecrans Street / Jefferson Street – LOS E/F during the a.m./p.m. peak hours
- Intersection #8. Camino Del Rio W. / Hancock Street – LOS F during the p.m. peak hour
- Intersection #11. Rosecrans Street / Sports Arena Boulevard – LOS E during the p.m. peak hour
- Intersection #12. Rosecrans Street / Midway Drive – LOS E during the p.m. peak hour
- Intersection #13. Rosecrans Street / Lytton Street – LOS E during the a.m. and p.m. peak hours
- Intersection #14. Lytton Street & Barnett Avenue / Truxtun Road – LOS E/F during the a.m./p.m. peak hours
- Intersection #18. Pacific Highway / Kurtz Street – LOS F during the a.m. and p.m. peak hours
- Intersection #19. Pacific Highway / Sports Arena Boulevard – LOS F during the p.m. peak hour
- Intersection #20. Pacific Highway / Enterprise Street – LOS F during the a.m. and p.m. peak hours
- Intersection #22. Old Town Avenue / San Diego Avenue – LOS F/E during the a.m./p.m. peak hours
- Intersection #23. Old Town Avenue / Moore Street – LOS F during the a.m. and p.m. peak hours
- Intersection #24. Old Town Avenue / Hancock Street – LOS F during the a.m. and p.m. peak hours
- Intersection #25. Witherby Street / Hancock Street – LOS F/F during the a.m. and p.m. peak hours

- Intersection #26. Witherby Street / Pacific Highway – LOS E/F during the a.m. and p.m. peak hours
- Intersection #27. Witherby Street / Tripoli Street – LOS E during the p.m. peak hour
- Intersection #28. Hancock Street / Noell Street – LOS E/F during the a.m./p.m. peak hours
- Intersection #30. W. Washington Street / Hancock Street – LOS E during the p.m. peak hour
- Intersection #31. Washington Street / Pacific Highway (N) – LOS F during the p.m. peak hour
- Intersection #33. Pacific Highway / Sassafras Street – LOS F during the a.m. and p.m. peak hours
- Intersection #34. Pacific Highway / Laurel Street – LOS F during the a.m. and p.m. peak hours
- Intersection #35. Harbor Drive / Laurel Street – LOS F during the a.m. and p.m. peak hours
- Intersection #36. Pacific Highway / Sea World Drive – LOS F during the p.m. peak hour
- Intersection #38. Sea World Drive / I-5 NB Ramps – LOS F during the p.m. peak hour

Appendix P contains the intersection analysis worksheets for the Year 2050 No-Action Alternative with Automated Passenger Mover scenario.

14.2 Daily Street Segment Operations

Street segment analyses were conducted for roadways in the study area under Year 2050 No-Action Alternative with Automated Passenger Mover. ***Table 14–2*** reports the Year 2050 No-Action Alternative street segment operations on a daily basis. The following segments are calculated to operate at LOS E or F:

- Street Segment #1. Rosecrans Street: Dewey Road to Lytton Street (LOS F)
- Street Segment #2. Rosecrans Street: Lytton Street to Midway Drive (LOS F)
- Street Segment #3. Rosecrans Street: Midway Drive to Sports Arena Boulevard (LOS F)
- Street Segment #4. Rosecrans Street: Sports Arena Boulevard Kurtz Street (LOS F)
- Street Segment #5. Rosecrans Street: Kurtz Street to Pacific Highway (LOS E)
- Street Segment #9. Taylor Street: Presidio Drive to I-8 East Ramp (LOS F)
- Street Segment #11. Pacific Highway: SeaWorld Drive to Taylor St (LOS F)
- Street Segment #13. Pacific Highway: Kurtz St to Sports Arena Boulevard (LOS F)
- Street Segment #14. Pacific Highway: Sports Arena Boulevard to Barnett Avenue (LOS F)
- Street Segment #15. Pacific Highway: Barnett Avenue to Witherby Street (LOS F)
- Street Segment #16. Pacific Highway: Witherby Street to W. Washington Street (LOS F)
- Street Segment #17. Pacific Highway: W. Washington Street to Sassafras Street (LOS F)

- Street Segment #19. Morena Boulevard: Friars Road to I-8 (LOS F)
- Street Segment #20. Linda Vista Road: Morena Boulevard to Colusa Street (LOS E)
- Street Segment #21. Kurtz Street: Rosecrans Street to Pacific Highway (LOS F)
- Street Segment #26. Midway Drive: East Drive to Rosecrans Street (LOS F)
- Street Segment #27. Midway Drive: Rosecrans Street to Bogley Drive (LOS E)
- Street Segment #28. Midway Drive: Bogley Drive to Barnett Avenue (LOS E)
- Street Segment #29. Lytton Street: Rosecrans Street to St. Charles Street (LOS F)
- Street Segment #30. Barnett Avenue: St. Charles Street to Henderson Avenue (LOS F)
- Street Segment #31. Barnett Avenue: Henderson Avenue to Pacific Highway (LOS F)
- Street Segment #32. Hancock Street: Old Town Avenue to Witherby Street (LOS F)
- Street Segment #34. Hancock Street: Noell Street to W. Washington Street (LOS F)
- Street Segment #35. Washington Street: Admiral Boland Way to Pacific Highway (LOS F)
- Street Segment #37. Washington Street: Hancock Street to W. University Avenue (LOS E)

14.3 Peak Hour Freeway Segment Operations

Freeway segments were analyzed under Year 2050 No-Action Alternative including an Automated Passenger Mover conditions. ***Tables 14–3*** report the Year 2050 No-Action Alternative including an Automated Passenger Mover freeway segment operations during the a.m. and p.m. peak hours, respectively. The following freeway segments are calculated to operate at LOS E or F:

- Freeway Segment #2. I-5: I-8 to Old Town Avenue, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)
- Freeway Segment #6. I-5: Pacific Highway Viaduct to Laurel Street, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)
- Freeway Segment #7. I-5: Laurel Street to Hawthorn Street, NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS F – p.m. peak)
- Freeway Segment #8. I-5: Hawthorn Street to 1st Avenue, NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS F – p.m. peak)
- Freeway Segment #9. I-5: 1st Avenue to 6th Avenue, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)
- Freeway Segment #10. I-5: 6th Avenue to SR-163, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)
- Freeway Segment #12. I-8: I-5 to Morena Boulevard, WB (LOS E – a.m. peak)
- Freeway Segment #13. I-8: Morena Boulevard to Hotel Circle/Taylor Street, WB (LOS F – a.m. peak) and EB (LOS E – p.m. peak)
- Freeway Segment #14. I-8: Taylor Street to Hotel Circle, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)

- Freeway Segment #15. I-8: Hotel Circle to SR-163, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)

Appendix Q contains detailed HCS calculation sheets for the Year 2050 No-Action Alternative including an Automated Passenger Mover conditions.

14.4 Ramp Meter Operations

The Moore Street / NB I-5 on-ramp meter was analyzed under Year 2050 No-Action Alternative with Automated Passenger Mover. ***Table 14–4*** reports the Year 2050 No-Action Alternative ramp meter operations.

- Ramp Meter #1. Moore Street/ I-5 NB On-Ramp – Delays of 166/220 minutes and queues of 166/220 vehicles during the a.m. / p.m. peak hours are calculated at the *Moore Street / NB I-5 On-Ramp* under Year 2050 No-Action Alternative including an Automated Passenger Mover.

The delay at this ramp meter is more than 15 minutes. Therefore, this on-ramp is expected to operate at an unacceptable delay under the Year 2050 No-Action Alternative with Automated Passenger Mover conditions.

Footnotes:

a. Mainline SOV lane geometry taken from PeMS lane configurations at corresponding postmile and validated against field observations.
b. See *Table 6–3* for K and D factors.
c. Passenger-car equivalent flow rate for peak 15-minute period (passenger-cars/hour/lane).
d. Per lane capacity adjusted for freeway segment geometry (passenger-cars/hour/lane).
e. V/C = (Peak Hour Volume/Hourly Capacity)
f. Density measures passenger cars per mile per lane. Density = Flow Rate (passenger-cars/hour/lane) ÷ Speed (average passenger-car speed in mph).
g. LOS = Level of Service

LOS	Density Range (pc/mi/ln)
A	0 – 11
B	> 11 – 18
C	> 18 – 26
D	> 26 – 35
E	> 35 – 45
F	> 45

General Notes:

1. Main = Mainline
2. Aux = Auxiliary
3. Truck factor sourced to most recent Caltrans Traffic Census Program *Peak Hour Volume Data* (2016).
4. "—" density exceeds the maximum threshold for LOS F.

TABLE 14–4
YEAR 2050 NO-ACTION ALTERNATIVE INCLUDING AN AUTOMATED PASSENGER MOVER RAMP METER OPERATIONS

Location / Condition	Peak Hour	Peak Hour Flow (D) (veh/hr/ln) [a]	Calculated (Most Restrictive)				
			Discharge Rate (R) (veh/hr/ln) [b]	Excess Demand (E) (veh/hr/ln) [c]	Delay (min/ln) [d]	Queue [e]	
						Feet	Vehicles
1. **Moore Street / NB I-5 On-Ramp**							
Year 2050 No-Action Alternative including an APM						2 SOV	
	AM	501	335	166	30	4,150	166
	PM	538	318	220	42	5,500	220

Footnotes:

a. Peak Hour Flow "D" is the traffic that desires to enter the freeway at this on-ramp during the peak hour.

b. Discharge Rate "R" is the *most restrictive* rate at which the ramp meter (signal) discharges traffic on to the freeway (See *Appendix B* for the ramp meter data obtained from Caltrans).

c. Excess Demand "E" is the difference between the Peak Hour Flow and the Discharge Rate.

d. Delay in minutes per lane experienced by each vehicle, calculated as the ratio of the Excess Demand and the Peak Hour Flow in one minute.

e. Queue per lane is reported in feet and is calculated as 25 feet per vehicle.

General Note:

1. SOV – Single Occupancy Vehicle Lane

15.0 Year 2050 with Alternative 4: Higher-density Mixed-use including a Transit Center Analysis

The following section presents the analysis of study area intersections, street segments, freeway segments, and ramp meters under Year 2050 conditions with the addition of Alternative 4: Higher-density Mixed-Use Revitalization including a Transit Center traffic. For the purposes of this study, impacts identified under Year 2050 conditions are considered "cumulative" transportation impacts.

15.1 Peak Hour Intersection Operations

Intersection capacity analyses were conducted for the study intersections under Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center conditions. ***Table 15–1*** reports the intersection operations during peak hour conditions. The following intersections are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Intersection #2 Taylor Street / I-8 EB Ramps – LOS E during the p.m. peak hour**
- **Intersection #6. Rosecrans Street & Taylor Street / Pacific Highway – LOS F during the a.m. and p.m. peak hours**
- **Intersection #7. Rosecrans Street / Jefferson Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #8. Camino Del Rio W. / Hancock Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #11. Rosecrans Street / Sports Arena Boulevard – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #12. Rosecrans Street / Midway Drive – LOS F during the p.m. peak hour**
- **Intersection #13. Rosecrans Street / Lytton Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #14. Lytton Street & Barnett Avenue / Truxtun Road – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #15. Midway Drive / Enterprise Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #16. Midway Drive / Barnett Avenue – LOS F during the p.m. peak hour**
- **Intersection #18. Pacific Highway / Kurtz Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #19. Pacific Highway / Sports Arena Boulevard – LOS F during the a.m. and p.m. peak hours**
- **Intersection #20. Pacific Highway / Enterprise Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #22. Old Town Avenue / San Diego Avenue – LOS F during the a.m. and p.m. peak hours**

- **<u>Intersection #23. Old Town Avenue / Moore Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #24. Old Town Avenue / Hancock Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #25. Witherby Street / Hancock Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #26. Witherby Street / Pacific Highway – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #27. Witherby Street / Tripoli Avenue – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #28. Hancock Street / Noell Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #30. W. Washington Street / Hancock Street – LOS E during the p.m. peak hour</u>**
- **<u>Intersection #31. W. Washington Street / Pacific Highway (N) – LOS F during the p.m. peak hour</u>**
- **<u>Intersection #33. Pacific Highway / Sassafras Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #34. Pacific Highway / Laurel Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #35. Harbor Drive / Laurel Street – LOS F during the a.m. and p.m. peak hours</u>**
- **<u>Intersection #36. Pacific Highway / Sea World Drive – LOS F during the a.m. and p.m. peak hours</u>**
- Intersection #38. Sea World Drive / I-5 NB Ramps – LOS F during the p.m. peak hour

Based on the established significance criteria, **<u>26 significant cumulative impacts</u>** were calculated with the addition of Alternative 4 traffic at the intersections **<u>bolded and underlined</u>** above since the Proposed Action alternative-induced change in delay is greater than 2.0 for LOS E operating intersections and greater than 1.0 second for the LOS F operating intersections.

Appendix R contains the intersection analysis worksheets for the Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center scenario.

15.2 Daily Street Segment Operations

Street segment analyses were conducted for roadways in the study area under Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center conditions. ***Table 15–2*** reports the Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center daily street segment operations. The following segments are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Street Segment #1. Rosecrans Street: Dewey Road to Lytton Street (LOS F)**
- **Street Segment #2. Rosecrans Street: Lytton Street to Midway Drive (LOS F)**
- **Street Segment #3. Rosecrans Street: Midway Drive to Sports Arena Boulevard (LOS F)**
- **Street Segment #4. Rosecrans Street: Sports Arena Boulevard to Kurtz Street (LOS F)**
- **Street Segment #5. Rosecrans Street: Kurtz Street to Pacific Highway (LOS E)**
- **Street Segment #9. Taylor Street: Presidio Drive to I-8 East Ramp (LOS F)**
- **Street Segment #11. Pacific Highway: SeaWorld Drive to Taylor Street (LOS F)**
- **Street Segment #13. Pacific Highway: Kurtz Street to Sports Arena Boulevard (LOS F)**
- **Street Segment #14. Pacific Highway: Sports Arena Boulevard to Barnett Avenue (LOS F)**
- **Street Segment #15. Pacific Highway: Barnett Avenue to Witherby Street (LOS F)**
- **Street Segment #16. Pacific Highway: Witherby Street to W. Washington Street (LOS F)**
- **Street Segment #17. Pacific Highway: W. Washington Street to Sassafras Street (LOS F)**
- **Street Segment #19. Morena Boulevard: Friars Road to I-8 (LOS F)**
- **Street Segment #20. Linda Vista Road; Morena Boulevard to Colusa Street (LOS F)**
- **Street Segment #21. Kurtz Street: Rosecrans Street to Pacific Highway (LOS F)**
- **Street Segment #25. Sports Arena Boulevard: Rosecrans Street to Enterprise Street (LOS F)**
- **Street Segment #26. Midway Drive: East Drive to Rosecrans Street (LOS F)**
- **Street Segment #27. Midway Drive: Rosecrans Street to Bogley Drive (LOS F)**
- **Street Segment #28. Midway Drive: Bogley Drive to Barnett Avenue (LOS F)**
- **Street Segment #29. Lytton Street: Rosecrans Street to St. Charles Street (LOS F)**
- **Street Segment #30. Barnett Avenue: St. Charles Street to Henderson Avenue (LOS F)**
- **Street Segment #31. Barnett Avenue: Henderson Avenue to Pacific Highway (LOS F)**
- **Street Segment #32. Hancock Street: Old Town Avenue to Witherby Street (LOS F)**
- **Street Segment #33. Hancock Street: Witherby Street Noell Street (LOS E)**
- Street Segment #34. Hancock Street: Noell Street to W. Washington Street (LOS F)

- Street Segment #35. W. Washington Street: Admiral Boland Way to Pacific Highway (LOS F)
- **Street Segment #37. W. Washington Street: Hancock Street to W. University Avenue (LOS E)**

Based on the established significance criteria, **25 significant cumulative impact** were calculated with the addition of Alternative 4 traffic on study area street segments **bolded and underlined** above since the Proposed Action alternative-induced change in V/C is greater than 0.02 for LOS E operating street segments and greater than 0.01 for LOS F operating street segments.

15.3 Peak Hour Freeway Segment Operations

Freeway segments were analyzed under Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center conditions. ***Tables 15–3*** and ***15–4*** report the Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center freeway segment operations during the a.m. and p.m. peak hours, respectively. The following freeway segments are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **<u>Freeway Segment #2. I-5: I-8 to Old Town Avenue, NB/SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)</u>**
- **<u>Freeway Segment #6. I-5: Pacific Highway Viaduct to Laurel Street, NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #7. I-5: Laurel Street to Hawthorn Street, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #8. I-5: Hawthorn Street to 1st Avenue, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #9. I-5: 1st Avenue to 6th Avenue, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #10. I-5: 6th Avenue to SR-163 NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #12. I-8: I-5 to Morena Boulevard, WB (LOS E – a.m. peak)</u>**
- **<u>Freeway Segment #13. I-8: Morena Boulevard to Hotel Circle/Taylor Street, WB (LOS F – a.m. peak) and EB (LOS E – p.m. peak)</u>**
- **<u>Freeway Segment #14. I-8: Taylor Street to Hotel Circle, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)</u>**
- **<u>Freeway Segment #15. I-8: Hotel Circle to SR-163, EB/WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)</u>**

Based on the established significance criteria, **<u>ten significant cumulative impacts</u>** were calculated with the addition of Alternative 4 traffic on study area freeway segments **<u>bolded and underlined</u>** above since the Proposed Action alternative-induced change in V/C is greater than 0.01 for LOS E operating freeway segments and greater than 0.005 for LOS F operating freeway segments

Appendix S contains the detailed HCS calculations sheets for the Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center scenario.

15.4 Peak Hour Ramp Meter Operations

The Moore Street / NB I-5 on-ramp meter was analyzed under Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center conditions. ***Table 15–5*** reports the Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center ramp meter operations.

- **Ramp Meter #1. Moore Street/ I-5 NB On-ramp** – Delays of 91/95 minutes and queues of 509/504 vehicles during the a.m. / p.m. peak hours are calculated.at the *Moore Street / NB I-5 On-Ramp* under Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center conditions.

Based on the established significance criteria, **one significant cumulative impact** was calculated with the addition of Alternative 4 traffic at the location **bolded and underlined** above since the total delay at this on ramp is more than 15 minutes during the a.m. and p.m. peak hours and the increase in the delay at the ramp meter is greater than 2.0 minutes.

Footnotes:

a. Mainline SOV lane geometry taken from PeMS lane configurations at corresponding postmile and validated against field observations.
b. See *Table 6–3* for K and D factors.
c. Passenger-car equivalent flow rate for peak 15-minute period (passenger-cars/hour/lane).
d. Per lane capacity adjusted for freeway segment geometry (passenger-cars/hour/lane).
e. V/C = (Peak Hour Volume/Hourly Capacity)
f. Density measures passenger cars per mile per lane. Density = Flow Rate (passenger-cars/hour/lane) ÷ Speed (average passenger-car speed in mph).
g. Level of Service
h. "Δ" denotes the Proposed Action-induced increase in V/C. Per City Guidelines, a significant impact occurs when the V/C is increased by greater than 0.01 for LOS E and 0.005 for LOS F.

LOS	Density Range (pc/mi/ln)
A	0 – 11
B	> 11 – 18
C	> 18 – 26
D	> 26 – 35
E	> 35 – 45
F	> 45

General Note:

1. M = Mainline
2. A = Auxiliary
3. Sig? = Significant impact, yes or no. **Bold** typeface and shading represent a significant impact.
4. "—" Indicates density exceeds the maximum threshold for LOS F.

General Note:

1. M = Mainline
2. A = Auxiliary
3. Sig? = Significant impact, yes or no. **Bold** typeface and shading represent a significant impact.
4. "—" Indicates density exceeds the maximum threshold for LOS F.

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4
RAMP METER OPERATIONS

Location / Condition	Peak Hour	Peak Hour Flow (D) (veh/hr/ln) [a]	Calculated (Most Restrictive)				
			Discharge Rate (R) (veh/hr/ln) [b]	Excess Demand (E) (veh/hr/ln) [c]	Delay (min/ln) [d]	Queue [e]	
						Feet	Vehicles
1. Moore Street / NB I-5 On-Ramp							
Year 2050 No-Action Alternative including an APM							2 SOV
	AM	501	335	166	30	4,150	166
	PM	538	318	220	42	5,500	220
Year 2050 with Alternative 4							2 SOV
	AM	844	335	509	91	12,725	509
	PM	822	318	504	95	12,588	504
Δ	**AM**			**343**	**61**	**8,575**	**343**
	PM			**284**	**53**	**7,088**	**284**

Footnotes:

a. Peak Hour Flow "D" is the traffic that desires to enter the freeway at this on-ramp during the peak hour.
b. Discharge Rate "R" is the *most restrictive* rate at which the ramp meter (signal) discharges traffic on to the freeway (See *Appendix B* for the ramp meter data obtained from Caltrans).
c. Excess Demand "E" is the difference between the Peak Hour Flow and the Discharge Rate.
d. Delay in minutes per lane experienced by each vehicle, calculated as the ratio of the Excess Demand and the Peak Hour Flow in one minute.
e. Queue per lane is reported in feet and is calculated as 25 feet per vehicle.

General Note:

1. SOV – Single Occupancy Vehicle Lane
2. Δ – Increase in delay and queue length due to the Proposed Action.
3. **Bold** typeface and shading represent a significant impact.

15.5 Significant Impacts and Mitigation Measures

Alternative 4 results in similar significant cumulative impacts as Alternatives 2 and 3. Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center would have significant cumulative impacts at **26** intersections, **25** impacts on street segments, **10** impacts on freeway segments, and **one (1)** impact to ramp meters.

Physical mitigation measures are recommended for locations impacted by the Proposed Action alternative to reduce impacts to less than significant. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange that would improve access to the OTC Site as well as reduce area traffic on local streets. This network improvement is proposed as mitigation for several impacted locations. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5 (only under the Alternative 4 and Alternative 5 scenarios where the transit center is consolidated on the OTC Site); direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. A concept plan showing this improvement is depicted later on in *Section 29.0* of this report.

For locations where improvements have been deemed unavoidable either due to physical constraints, right-of-way constraints, or jurisdictional constraints and where the reconstructed interchange would not fully mitigate, it is recommended that the Proposed Action alternative contribute to the implementation of Transportation Systems Management (TSM) technology to improve traffic operations along various corridors. The City of San Diego includes future traffic signal communication network elements in their Traffic Signal Communications Master Plan (2014). Part of the Master Plan would be to implement an Intelligent Transportation Systems (ITS) program on key transportation corridors within the City. ITS is a fully responsive system that can be used to benefit all modes of travel including motorists, bicyclists, pedestrians, transit and emergency vehicles. The recommendation to contribute to implementation of ITS measures for locations where significant impacts are unavoidable is included below.

Additionally, implementation of Transportation Demand Management (TDM) measures by individual projects within the OTC Site as they are developed would reduce vehicular traffic and help lessen traffic impacts on study area intersections, street segments, and freeway segments. A TDM plan is a valuable tool to reducing single-occupancy vehicle (SOV) trips and therefore recommended for the Proposed Action alternatives. Further details on TDM and TSM measures are provided later on in *Sections 27.0 and 28.0* of this report, respectively.

Table 15–5 lists the significantly impacted locations and proposed mitigation measures.

Figure 15–1 shows an illustration of the significantly impacted locations.

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
INTERSECTIONS					
Alt 4-I-1	2	Taylor St/ I-8 EB Ramps	San Diego/ Caltrans	Per the Mission Valley Community Plan, the entirety of Hotel Circle will be transformed from a bi-directional collector to a one-way couplet running in the clockwise direction. As part of this network change, the Taylor Street/I-8 Eastbound Ramps interchange will be eliminated and replaced by a new signalized interchange at I-8 with the future connection of Via Las Cumbres. Given the unknown timing for implementation and the lack of an identified funding source in the Mission Valley Community Plan, the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-2	6	Pacific Hwy/ Rosecrans St/ Taylor St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes to provide a second southbound left-turn lane, a westbound right-turn overlap phase, and a second northbound right-turn lane. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance. Alternatively, together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5

YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-3	7	Rosecrans St/ Jefferson St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installation of a traffic signal at this intersection would improve operations at this intersection. However, the intersection is located within close proximity to the Rosecrans Street/Taylor Street/ Pacific Highway signalized intersection (350 feet) which would be less than ideal for installing a signal and it would not be expected that the intersection would meet signal warrants given the very low minor street volumes on Jefferson Street. The provision of an additional signal on this segment of Rosecrans Street where heavy through traffic is observed would not be beneficial to the major street traffic flow. Based on these findings, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-4	8	Camino Del Rio W/ Hancock St	San Diego	The intersection is built out with regard to available right-of-way. Additional through lanes on Camino Del Rio West are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-5	11	Rosecrans St/ Sports Arena Blvd/ Camino Del Rio W	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the southbound free right-turn movement from Camino Del Rio West onto Sports Arena Boulevard and replace it with an exclusive right-turn lane. The planned improvements allow southbound movements to continue on Sports Arena Boulevard through the intersection. Notably, vehicles would still not be able to access the southern leg of Sports Arena Boulevard from westbound Rosecrans Street or southwest bound Camino del Rio West. With the improvements proposed at this intersection, the Community Plan reports LOS D results. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-6	12	Rosecrans St/ Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes an exclusive southbound right-turn lane with an overlap phase, a westbound right-turn overlap phase, and an eastbound right-turn overlap phase. With the improvements proposed at this intersection, the Community Plan reports LOS E results, concluding the impact remains significant and unavoidable. With the additional traffic added by the Proposed Action alternative, the intersection continues to operate at LOS E. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-7	13	Rosecrans St/ Lytton St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes right-turn overlap phasing in the northbound, southbound, and westbound directions. A second eastbound left-turn lane is proposed. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-8	14	Truxtun Rd/ Lytton St/ Barnett Ave	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Constructing an eastbound dedicated right-turn lane within the existing curb-to-curb width would mitigate the impact to below a level of significance.	Yes
Alt 4-I-9	15	Midway Dr/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. From centerline to centerline, this intersection is approximately 160 feet from the Midway Drive/ Barnett Avenue intersection. The existing configuration of these two intersections are such that raised medians restrict turning movements requiring out of direction travel on Midway Drive, Barnett Avenue and Jessop Lane. The traffic added by the Proposed Action alternative to the westbound right-turning movement is substantial. Those additional trips result in a significant delay for southbound right-turns from Enterprise Street onto Midway Drive. Due to the physical constraints and irregular configuration of this intersection and its proximity to the Midway Drive/ Barnett Avenue intersection, reconstructing this intersection in combination with the Midway/ Barnett Avenue intersection into a signalized four-way intersection would be required to partially mitigate this impact. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-10	16	Barnett Ave/ Midway Dr	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. From centerline to centerline, this intersection is approximately 160 feet from the Midway Drive/ Enterprise Street intersection. The existing configuration of these two intersections are such that raised medians restrict turning movements requiring out of direction travel on Midway Drive, Barnett Avenue and Jessop Lane. The traffic added by the Proposed Action alternative to the southbound right-turning and eastbound left-turning movements is substantial. Those additional trips result in a significant delay at this intersection. Due to the physical constraints and irregular configuration of this intersection and its proximity to the Midway Drive/ Enterprise Street, reconstructing this intersection in combination with the Midway Drive/ Enterprise Street intersection into a signalized four-way intersection would be required to partially mitigate this impact. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-11	18	Pacific Hwy/ Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to signalize the intersection and allow eastbound left-turn movements. With the improvements proposed at this intersection, the Community Plan reports high LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-12	19	Sports Arena Blvd/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to relocate the intersection 500 feet to the north of its current location. Improvements to realign Sports Arena Boulevard to create a right-angle with Pacific Highway are planned, as well as signalizing the intersection, providing an exclusive eastbound left-turn lane from Sports Arena Boulevard onto Pacific Highway and providing a northbound left-turn lane from Pacific Highway onto Sports Arena Boulevard. With the improvements proposed at this intersection, the Community Plan reports LOS C results. With the additional traffic added by the Proposed Action alternative, acceptable LOS operations would continue to occur. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements to mitigate the impact to below a level of significance.	Yes
Alt 4-I-13	20	Pacific Hwy/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. This intersection currently serves as an access point for the existing NAVWAR OTC Site. With future development of the Proposed Action alternative, this intersection would likely be improved to provide additional lanes entering/exiting the site. However, additional lanes would be needed on Pacific Highway. Any widening to Pacific Highway would be infeasible due to lack of right-of-way. Therefore, the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-14	22	Old Town Ave/ San Diego Ave	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. The intersection is built out with regard to available right-of-way. Extra lanes on intersection approaches are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Therefore, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-15	23	Old Town Ave/ Moore St	San Diego	Per the Old Town Community Plan, improvements are recommended at this intersection. The Community Plan recommends signal phasing be changed from permissive to protected and to add exclusive left-turn lanes on Old Town Avenue approaching the intersection. However, the Community Plan concludes there is no available right-of-way to complete the improvements. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Moore Street intersection that effectively operates as the I-5 North interchange with Old Town Avenue. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-I-16	24	Hancock St/ Old Town Ave/ I-5 SB Off-Ramps	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Hancock Street intersection that effectively operates as the I-5 southbound off-ramp with Old Town Avenue and Hancock Street. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5

YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-17	25	Witherby St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to widen the northbound approach to provide one shared through/right-turn lane and one shared through/left-turn lane. With the improvements proposed at this intersection, the Community Plan reports low LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-I-18	26	Witherby St/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-19	27	Tripoli Ave/ Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-I-20	28	Noell St/ Hancock St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installing a traffic signal at this intersection would mitigate the impact to below a level of significance.	Yes
Alt 4-I-21	30	Washington St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are recommended at this intersection. The Community Plan recommends restriping the southbound approach to provide a second right-turn lane. However, the Community Plan states that the provision of the additional turn lane would eliminate heavily utilized street parking and concluded impacts to this intersection would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-22	31	Washington St/ Pacific Hwy (N)	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends participation by the airport in regional efforts to develop a long-range transportation solution for accessing the airport, including: 1) participate in regional planning efforts led by SANDAG to determine transit connections between regional transit and the airport terminals, freeway connections along the Laurel Street corridor, intelligent transportation systems, and mobility hub improvements/strategies; and 2) participate in the implementation of improvements and strategies identified in the Airport Connectivity Analysis. However, the improvements were considered infeasible because parts of the mitigation measures are within the control of other agencies or jurisdictions. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-I-23	33	Pacific Hwy/ Sassafras St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a second eastbound through lane and restriping the southbound approach to provide a left-turn lane, three through lanes, and a right-turn lane to add capacity to the intersection, though the additional capacity continued to result in LOS E operations rendering the impact not fully mitigated. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-I-24	34	Pacific Hwy / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the removal of a westbound through land and addition of a second eastbound left-turn lane, conversion of a southbound through lane into a second right-turn lane, and re-coordination of the signals along Laurel Street. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. Implementation of these improvements in the Airport Development Plan showed the intersection would continue to operate at poor LOS conditions rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-25	35	Harbor Dr / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a third eastbound left-turn lane and removal of an eastbound through lane to add capacity to the intersection, though the additional capacity continued to result in poor LOS operations rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-I-26	36	Pacific Hwy / Sea World Dr	San Diego	There are no planned improvements in the Mission Bay Park Master Plan at this intersection. In order to improve operations at this intersection, the Proposed Action alternative should construct an additional southbound left-turn lane from SeaWorld Drive to eastbound Pacific Highway. Implementation of this improvement would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
STREET SEGMENTS					
		Rosecrans Street			
Alt 4-S-1	1	Dewey Rd to Lytton St	San Diego	Per the Peninsula Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a five-lane Collector with a center left-turn lane with a LOS E capacity of 37,500 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 2,500 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-2	2	Lytton St to Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-3	3	Midway Dr to Sports Arena Blvd	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-4	4	Sports Arena Blvd to Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-5	5	E: Kurtz St to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a s four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Taylor Street			
Alt 4-S-6	9	Presidio Dr to I-8 East Ramp	San Diego	There are no planned improvements in the Old Town Community Plan along this street segment. Additional lanes are needed on Taylor Street to increase the capacity along this roadway. However, due to the historic nature of the Old Town Community, the Community Plan does not propose any road widenings or significant capacity improvements. Additionally, there is not enough right-of-way available along this segment of Taylor Street to accommodate two additional through lanes and a center median while maintaining a Class II bicycle facility. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Pacific Highway			
Alt 4-S-7	11	SeaWorld Dr to Taylor St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge would be infeasible. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-8	13	Kurtz St to Sports Arena Blvd	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Although the interchange project improves operations along Pacific Highway, the daily volumes on this segment of Pacific Highway would continue to exceed the capacity of the roadway. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-9	14	Sports Arena Blvd to Barnett Ave	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Although the interchange project improves operations along Pacific Highway, the daily volumes on this segment of Pacific Highway would continue to exceed the capacity of the roadway. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 4-S-10	15	Barnett Ave to Witherby St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-11	16	Witherby St to W. Washington St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-12	17	W. Washington St to Sassafras St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Morena Boulevard			
Alt 4-S-13	19	Friars Rd to I-8	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Morena Boulevard to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge to four lanes would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Linda Vista Road			

TABLE 15–5

YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-14	20	Morena Blvd to Colusa St	San Diego	Per the Linda Vista Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Linda Vista Road currently functions as a four-lane Collector with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Road with a raised median with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Kurtz Street			
Alt 4-S-15	21	Rosecrans to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Kurtz Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Sports Arena Blvd			
Alt 4-S-16	25	Rosecrans St to Enterprise St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Sports Arena Boulevard currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Midway Drive			
Alt 4-S-17	26	East Dr to Rosecrans St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional capacity is needed on Midway Drive to improve operations along this roadway. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. Due to the lack of available right-of-way, widening the roadway to four-lane Major Arterial standards would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-18	27	Rosecrans St to Bogley Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-19	28	Bogley Dr to Barnett Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. With the improvements proposed along this street segment, the Community Plan reports LOS C results. However, the additional traffic added by the Proposed Action alternative degrades roadway operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact on this street segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Lytton Street			
Alt 4-S-20	29	Rosecrans St to St. Charles St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Lytton Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with an LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
		Barnett Avenue			
Alt 4-S-21	30	St. Charles St to Henderson Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a raised median with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 4-S-22	31	Henderson Ave to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 30,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Hancock Street			
Alt 4-S-23	32	Old Town Ave to Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Hancock Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Collector with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. With the improvements proposed along this street segment, the Community Plan reports mid-LOS D results. However, the additional traffic added by the Proposed Action alternative degrades roadway operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 15–5
YEAR 2050 WITH ALTERNATIVE 4 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 4-S-24	33	Witherby St to Noell St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
		W. Washington Street			
Alt 4-S-25	37	Hancock St to W. University Ave	San Diego	There are no planned improvements in the Uptown Community Plan along this street segment. Additional lanes are needed on Washington Street to increase the capacity along this roadway. Widening this section of Washington Street requires substantial grading and filling on both sides of the roadway. On the south side, a steep grade abuts the shoulder. On the north side, a drainage ditch lies adjacent to the roadway. The physical constraints of widening this segment of Washington Street would render this impact significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
FREEWAYS					
Alt 4-F-1	2	I-5: I-8 to Old Town Ave	Caltrans	The SANDAG 2050 San Diego Forward: The Regional Plan identifies “operational improvements” along this freeway segment. The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

16.0 YEAR 2050 WITH ALTERNATIVE 5: LOWER-DENSITY MIXED-USE REVITALIZATION INCLUDING A TRANSIT CENTER ANALYSIS

The following section presents the analysis of study area intersections, street segments, freeway segments, and ramp meters under Year 2050 conditions with the addition of Alternative 5: Lower-density Mixed-Use Revitalization including a Transit Center traffic. No changes to the street network over existing conditions were assumed in the analysis. For the purposes of this study, impacts identified under Year 2050 conditions are considered "cumulative" transportation impacts.

16.1 Peak Hour Intersection Operations

Intersection capacity analyses were conducted for the study intersections under Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center conditions. ***Table 16–1*** reports the intersection operations during peak hour conditions. The following intersections are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Intersection #2. Taylor Street / I-8 EB Ramps – LOS E during the p.m. peak hour**
- **Intersection #6. Rosecrans Street & Taylor Street / Pacific Highway – LOS F during the a.m. and p.m. peak hours**
- **Intersection #7. Rosecrans Street / Jefferson Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #8. Camino Del Rio W. / Hancock Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #11. Rosecrans Street / Sports Arena Boulevard – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #12. Rosecrans Street / Midway Drive – LOS E during the p.m. peak hour**
- **Intersection #13. Rosecrans Street / Lytton Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #14. Lytton Street & Barnett Avenue / Truxtun Road – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #15. Midway Drive / Enterprise Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #16. Midway Drive / Barnett Avenue – LOS E during the p.m. peak hour**
- **Intersection #18. Pacific Highway / Kurtz Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #19. Pacific Highway / Sports Arena Boulevard – LOS F during the a.m. and p.m. peak hours**
- **Intersection #20. Pacific Highway / Enterprise Street – LOS F during the a.m. and p.m. peak hours**

- **Intersection #22. Old Town Avenue / San Diego Avenue – LOS F/E during the a.m./p.m. peak hours**
- **Intersection #23. Old Town Avenue / Moore Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #24. Old Town Avenue / Hancock Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #25. Witherby Street / Hancock Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #26. Witherby Street / Pacific Highway – LOS F during the a.m. and p.m. peak hours**
- **Intersection #27. Witherby Street / Tripoli Avenue – LOS F during the a.m. and p.m. peak hours**
- **Intersection #28. Hancock Street / Noell Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #30. W. Washington Street / Hancock Street – LOS E during the p.m. peak hour**
- **Intersection #31. W. Washington Street / Pacific Highway (N) – LOS F during the p.m. peak hour**
- **Intersection #33. Pacific Highway / Sassafras Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #34. Pacific Highway / Laurel Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #35. Harbor Drive / Laurel Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #36. Pacific Highway / Sea World Drive – LOS F during the a.m. and p.m. peak hours**
- Intersection #38. Sea World Drive / I-5 NB Ramps – LOS F during the p.m. peak hour

Based on the established significance criteria, **26 significant cumulative impacts** were calculated with the addition of Alternative 5 traffic at the intersections **bolded and underlined** above since the Proposed Action alternative-induced change in delay is greater than 2.0 seconds for LOS E operating intersections and greater than 1.0 second for LOS F operating intersections.

Appendix T contains the intersection analysis worksheets for the Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center scenario.

16.2 Daily Street Segment Operations

Street segment analyses were conducted for roadways in the study area under Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center conditions. ***Table 16–2*** reports the Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center daily street segment operations. The following segments are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Street Segment #1. Rosecrans Street: Dewey Road to Lytton Street (LOS F)**
- **Street Segment #2. Rosecrans Street: Lytton Street to Midway Drive (LOS F)**
- **Street Segment #3. Rosecrans Street: Midway Drive to Sports Arena Boulevard (LOS F)**
- **Street Segment #4. Rosecrans Street: Sports Arena Boulevard to Kurtz Street (LOS F)**
- **Street Segment #5. Rosecrans Street: Kurtz Street to Pacific Highway (LOS E)**
- **Street Segment #9. Taylor Street: Presidio Drive to I-8 East Ramp (LOS F)**
- **Street Segment #11. Pacific Highway: SeaWorld Drive to Taylor Street (LOS F)**
- **Street Segment #13. Pacific Highway: Kurtz Street to Sports Arena Boulevard (LOS F)**
- **Street Segment #14. Pacific Highway: Sports Arena Boulevard to Barnett Avenue (LOS F)**
- **Street Segment #15. Pacific Highway: Barnett Avenue to Witherby Street (LOS F)**
- **Street Segment #16. Pacific Highway: Witherby Street to W. Washington Street (LOS F)**
- **Street Segment #17. Pacific Highway: W. Washington Street to Sassafras Street (LOS F)**
- **Street Segment #19. Morena Boulevard: Friars Road to I-8 (LOS F)**
- **Street Segment #20. Linda Vista Road: Morena Bouelvard to Colusa Street (LOS F)**
- **Street Segment #21. Kurtz Street: Rosecrans Street to Pacific Highway (LOS F)**
- **Street Segment #25. Sports Arena Boulevard: Rosecrans Street to Enterprise Street (LOS E)**
- **Street Segment #26. Midway Drive: East Drive to Rosecrans Street (LOS F)**
- **Street Segment #27. Midway Drive: Rosecrans Street to Bogley Drive (LOS F)**
- **Street Segment #28. Midway Drive: Bogley Drive to Barnett Avenue (LOS F)**
- **Street Segment #29. Lytton Street: Rosecrans Street to St. Charles Street (LOS F)**
- **Street Segment #30. Barnett Avenue: St. Charles Street to Henderson Avenue (LOS F)**
- **Street Segment #31. Barnett Avenue: Henderson Avenue to Pacific Highway (LOS F)**
- **Street Segment #32. Hancock Street: Old Town Avenue to Witherby Street (LOS F)**
- **Street Segment #33. Hancock Street: Witherby Street Noell Street (LOS E)**
- Street Segment #34. Hancock Street: Noell Street to W. Washington Street (LOS F)

- Street Segment #35. W. Washington Street: Admiral Boland Way to Pacific Highway (LOS F)
- **Street Segment #37. W. Washington Street: Hancock Street to W. University Avenue (LOS E)**

Based on the established significance criteria, **25 significant cumulative impact** were calculated with the addition of Alternative 5 traffic on study area street segments **bolded and underlined** above since the Proposed Action alternative-induced change in V/C is greater than 0.02 for LOS E operating street segments and greater than 0.01 for LOS F operating street segments.

16.3 Peak Hour Freeway Segment Operations

Freeway segments were analyzed under Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center conditions. ***Tables 16–3*** and ***16–4*** report the Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center freeway segment operations during the a.m. and p.m. peak hours, respectively. The following freeway segments are calculated to operate at LOS E or F:

- **Freeway Segment #2. I-5: I-8 to Old Town Avenue, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)**
- **Freeway Segment #6. I-5: Pacific Highway Viaduct to Laurel Street, NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS F – p.m. peak)**
- **Freeway Segment #7. I-5: Laurel Street to Hawthorn Street, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)**
- **Freeway Segment #8. I-5: Hawthorn Street to 1st Avenue, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)**
- **Freeway Segment #9. I-5: 1st Avenue to 6th Avenue, NB/SB (LOS F – a.m. peak) and NB/SB (LOS F – p.m. peak)**
- **Freeway Segment #10. I-5: 6th Avenue to SR-163 NB/SB (LOS E/F – a.m. peak) and NB/SB (LOS E/F – p.m. peak)Freeway Segment #12. I-8: I-5 to Morena Boulevard, WB (LOS E – a.m. peak)**
- **Freeway Segment #13. I-8: Morena Boulevard to Hotel Circle/Taylor Street, WB (LOS F – a.m. peak) and EB (LOS E – p.m. peak)**
- **Freeway Segment #14. I-8: Taylor Street to Hotel Circle, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)**
- **Freeway Segment #15. I-8: Hotel Circle to SR-163, EB/WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)**

Based on the established significance criteria, **ten significant cumulative impacts** were calculated with the addition of Alternative 5 traffic on study area freeway segments **bolded and underlined** above since the Proposed Action alternative-induced change in V/C is greater than 0.01 for LOS E operating freeway segments and greater than 0.005 for LOS F operating freeway segments

Appendix U contains the detailed HCS calculations sheets for the Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center scenario.

16.4 Peak Hour Ramp Meter Operations

The Moore Street / NB I-5 on-ramp meter was analyzed under Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center conditions. ***Table 16–4*** reports the Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center ramp meter operations.

- **Ramp Meter #1. Moore Street/ I-5 NB On-ramp** – Delays of 79/82 minutes and queues of 442/435 vehicles during the a.m. / p.m. peak hours are calculated.at the *Moore Street / NB I-5 On-Ramp* under Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center conditions.

Based on the established significance criteria, **one (1) significant cumulative impact** was calculated with the addition of Alternative 5 traffic at the location **bolded and underlined** above since the total delay at this on ramp is more than 15 minutes during the a.m. and p.m. peak hours and the increase in the delay at the ramp meter is greater than 2.0 minutes.

Footnotes:

a. The capacity of the roadway at Level of Service E.
b. Level of Service.
c. The Volume to Capacity ratio.
d. Increase in V/C ratio due to the addition of Proposed Action traffic.

General Notes:

1. Sig = Significant impact, yes or no.
2. **Bold** typeface and shading represent a significant impact.

Footnotes:

a. Mainline SOV lane geometry taken from PeMS lane configurations at corresponding postmile and validated against field observations.
b. See *Table 6–3* for K and D factors.
c. Passenger-car equivalent flow rate for peak 15-minute period (passenger-cars/hour/lane).
d. Per lane capacity adjusted for freeway segment geometry (passenger-cars/hour/lane).
e. V/C = (Peak Hour Volume/Hourly Capacity)
f. Density measures passenger cars per mile per lane. Density = Flow Rate (passenger-cars/hour/lane) ÷ Speed (average passenger-car speed in mph).
g. Level of Service
h. "Δ" denotes the Proposed Action-induced increase in V/C. Per City Guidelines, a significant impact occurs when the V/C is increased by greater than 0.01 for LOS E and 0.005 for LOS F.

LOS	Density Range (pc/mi/ln)
A	0 – 11
B	> 11 – 18
C	> 18 – 26
D	> 26 – 35
E	> 35 – 45
F	> 45

General Note:

1. M = Mainline
2. A = Auxiliary
3. Sig? = Significant impact, yes or no. **Bold** typeface and shading represent a significant impact.
4. "—" Indicates density exceeds the maximum threshold for LOS F.

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5
RAMP METER OPERATIONS

Location / Condition	Peak Hour	Peak Hour Flow (D) (veh/hr/ln) [a]	Calculated (Most Restrictive)				
			Discharge Rate (R) (veh/hr/ln) [b]	Excess Demand (E) (veh/hr/ln) [c]	Delay (min/ln) [d]	Queue [e]	
						Feet	Vehicles
1. Moore Street / NB I-5 On-Ramp							
Year 2050 No-Action Alternative including an APM							2 SOV
	AM	501	335	166	30	4,150	166
	PM	538	318	220	42	5,500	220
Year 2050 with Alternative 5							2 SOV
	AM	777	335	442	79	11,038	442
	PM	753	318	435	82	10,863	435
Δ	**AM**			**276**	**49**	**6,888**	**276**
	PM			**215**	**40**	**5,363**	**215**

Footnotes:

a. Peak Hour Flow "D" is the traffic that desires to enter the freeway at this on-ramp during the peak hour.

b. Discharge Rate "R" is the *most restrictive* rate at which the ramp meter (signal) discharges traffic on to the freeway (See *Appendix B* for the ramp meter data obtained from Caltrans).

c. Excess Demand "E" is the difference between the Peak Hour Flow and the Discharge Rate.

d. Delay in minutes per lane experienced by each vehicle, calculated as the ratio of the Excess Demand and the Peak Hour Flow in one minute.

e. Queue per lane is reported in feet and is calculated as 25 feet per vehicle.

General Note:

1. SOV – Single Occupancy Vehicle Lane
2. Δ – Increase in delay and queue length due to the Proposed Action.
3. **Bold** typeface and shading represent a significant impact.

16.5 Significant Impacts and Mitigation Measures

Alternative 5 results in the same significant cumulative impacts as Alternative 4. Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center would have significant cumulative impacts at **26** intersections, on **25** street segments, on **10** freeways segments, and at **one (1)** ramp meter.

Physical mitigation measures are recommended for locations impacted by the Proposed Action alternative to reduce impacts to less than significant. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange that would improve access to the OTC Site as well as reduce area traffic on local streets. This network improvement is proposed as mitigation for several impacted locations. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5 (only under the Alternative 4 and Alternative 5 scenarios where the transit center is consolidated on the OTC Site); direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. A concept plan showing this improvement is depicted later on in *Section 29.0* of this report.

For locations where improvements have been deemed unavoidable either due to physical constraints, right-of-way constraints, or jurisdictional constraints and where the reconstructed interchange would not fully mitigate, it is recommended that the Proposed Action alternative contribute to the implementation of Transportation Systems Management (TSM) technology to improve traffic operations along various corridors. The City of San Diego includes future traffic signal communication network elements in their Traffic Signal Communications Master Plan (2014). Part of the Master Plan would be to implement an Intelligent Transportation Systems (ITS) program on key transportation corridors within the City. ITS is a fully responsive system that can be used to benefit all modes of travel including motorists, bicyclists, pedestrians, transit and emergency vehicles. The recommendation to contribute to implementation of ITS measures for locations where significant impacts are unavoidable is included below.

Additionally, implementation of Transportation Demand Management (TDM) measures by individual projects within the OTC Site as they are developed would reduce vehicular traffic and help lessen traffic impacts on study area intersections, street segments, and freeway segments. A TDM plan is a valuable tool to reducing single-occupancy vehicle (SOV) trips and therefore recommended for the Proposed Action alternatives. Further details on TDM and TSM measures are provided later on in *Sections 27.0 and 28.0* of this report, respectively.

Table 16–5 lists the significantly impacted locations and proposed mitigation measures.

Figure 16–1 shows an illustration of the significantly impacted locations.

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
INTERSECTIONS					
Alt 5-I-1	2	Taylor St/ I-8 EB Ramps	San Diego/ Caltrans	Per the Mission Valley Community Plan, the entirety of Hotel Circle will be transformed from a bi-directional collector to a one-way couplet running in the clockwise direction. As part of this network change, the Taylor Street/I-8 Eastbound Ramps interchange will be eliminated and replaced by a new signalized interchange at I-8 with the future connection of Via Las Cumbres. Given the unknown timing for implementation and the lack of an identified funding source in the Mission Valley Community Plan, the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-2	6	Pacific Hwy/ Rosecrans St/ Taylor St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes to provide a second southbound left-turn lane, a westbound right-turn overlap phase, and a second northbound right-turn lane. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance. Alternatively, together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-3	7	Rosecrans St/ Jefferson St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installation of a traffic signal at this intersection would improve operations at this intersection. However, the intersection is located within close proximity to the Rosecrans Street/Taylor Street/ Pacific Highway signalized intersection (350 feet) which would be less than ideal for installing a signal and it would not be expected that the intersection would meet signal warrants given the very low minor street volumes on Jefferson Street. The provision of an additional signal on this segment of Rosecrans Street where heavy through traffic is observed would not be beneficial to the major street traffic flow. Based on these findings, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-4	8	Camino Del Rio W/ Hancock St	San Diego	The intersection is built out with regard to available right-of-way. Additional through lanes on Camino Del Rio West are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-5	11	Rosecrans St/ Sports Arena Blvd/ Camino Del Rio W	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the southbound free right-turn movement from Camino Del Rio West onto Sports Arena Boulevard and replace it with an exclusive right-turn lane. The planned improvements allow southbound movements to continue on Sports Arena Boulevard through the intersection. Notably, vehicles would still not be able to access the southern leg of Sports Arena Boulevard from westbound Rosecrans Street or southwest bound Camino del Rio West. With the improvements proposed at this intersection, the Community Plan reports LOS D results. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-6	12	Rosecrans St/ Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes an exclusive southbound right-turn lane with an overlap phase, a westbound right-turn overlap phase, and an eastbound right-turn overlap phase. With the improvements proposed at this intersection, the Community Plan reports LOS E results, concluding the impact remains significant and unavoidable. With the additional traffic added by the Proposed Action alternative, the intersection continues to operate at LOS E. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-7	13	Rosecrans St/ Lytton St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes right-turn overlap phasing in the northbound, southbound, and westbound directions. A second eastbound left-turn lane is proposed. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-8	14	Truxtun Rd/ Lytton St/ Barnett Ave	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Constructing an eastbound dedicated right-turn lane within the existing curb-to-curb width would mitigate the impact to below a level of significance.	Yes
Alt 5-I-9	15	Midway Dr/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. From centerline to centerline, this intersection is approximately 160 feet from the Midway Drive/ Barnett Avenue intersection. The existing configuration of these two intersections are such that raised medians restrict turning movements requiring out of direction travel on Midway Drive, Barnett Avenue and Jessop Lane. The traffic added by the Proposed Action alternative to the westbound right-turning movement is substantial. Those additional trips result in a significant delay for southbound right-turns from Enterprise Street onto Midway Drive. Due to the physical constraints and irregular configuration of this intersection and its proximity to the Midway Drive/ Barnett Avenue intersection, reconstructing this intersection in combination with the Midway/ Barnett Avenue intersection into a signalized four-way intersection would be required to partially mitigate this impact. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-10	16	Barnett Ave/ Midway Dr	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. From centerline to centerline, this intersection is approximately 160 feet from the Midway Drive/ Enterprise Street intersection. The existing configuration of these two intersections are such that raised medians restrict turning movements requiring out of direction travel on Midway Drive, Barnett Avenue and Jessop Lane. The traffic added by the Proposed Action alternative to the southbound right-turning and eastbound left-turning movements is substantial. Those additional trips result in a significant delay at this intersection. Due to the physical constraints and irregular configuration of this intersection and its proximity to the Midway Drive/ Enterprise Street, reconstructing this intersection in combination with the Midway Drive/ Enterprise Street intersection into a signalized four-way intersection would be required to partially mitigate this impact. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-11	18	Pacific Hwy/ Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to signalize the intersection and allow eastbound left-turn movements. With the improvements proposed at this intersection, the Community Plan reports high LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-12	19	Sports Arena Blvd/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to relocate the intersection 500 feet to the north of its current location. Improvements to realign Sports Arena Boulevard to create a right-angle with Pacific Highway are planned, as well as signalizing the intersection, providing an exclusive eastbound left-turn lane from Sports Arena Boulevard onto Pacific Highway and providing a northbound left-turn lane from Pacific Highway onto Sports Arena Boulevard. With the improvements proposed at this intersection, the Community Plan reports LOS C results. With the additional traffic added by the Proposed Action alternative, acceptable LOS operations would continue to occur. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements to mitigate the impact to below a level of significance.	Yes
Alt 5-I-13	20	Pacific Hwy/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. This intersection currently serves as an access point for the existing NAVWAR OTC Site. With future development of the Proposed Action alternative, this intersection would likely be improved to provide additional lanes entering/exiting the site. However, additional lanes would be needed on Pacific Highway. Any widening to Pacific Highway would be infeasible due to lack of right-of-way. Therefore, the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-14	22	Old Town Ave/ San Diego Ave	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. The intersection is built out with regard to available right-of-way. Extra lanes on intersection approaches are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Therefore, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-15	23	Old Town Ave/ Moore St	San Diego	Per the Old Town Community Plan, improvements are recommended at this intersection. The Community Plan recommends signal phasing be changed from permissive to protected and to add exclusive left-turn lanes on Old Town Avenue approaching the intersection. However, the Community Plan concludes there is no available right-of-way to complete the improvements. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Moore Street intersection that effectively operates as the I-5 North interchange with Old Town Avenue. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-I-16	24	Hancock St/ Old Town Ave/ I-5 SB Off-Ramps	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Hancock Street intersection that effectively operates as the I-5 southbound off-ramp with Old Town Avenue and Hancock Street. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-17	25	Witherby St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to widen the northbound approach to provide one shared through/right-turn lane and one shared through/left-turn lane. With the improvements proposed at this intersection, the Community Plan reports low LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-I-18	26	Witherby St/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5

YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-19	27	Tripoli Ave/ Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to remove the grade separation between Witherby Street, Pacific Highway, and Tripoli Avenue and construct an at-grade four-way signalized allowing for full movements. The Community Plan does not further analyze these improvements or discuss their feasibility. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-I-20	28	Noell St/ Hancock St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installing a traffic signal at this intersection would mitigate the impact to below a level of significance.	Yes
Alt 5-I-21	30	Washington St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are recommended at this intersection. The Community Plan recommends restriping the southbound approach to provide a second right-turn lane. However, the Community Plan states that the provision of the additional turn lane would eliminate heavily utilized street parking and concluded impacts to this intersection would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5

YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-22	31	Washington St/ Pacific Hwy (N)	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends participation by the airport in regional efforts to develop a long-range transportation solution for accessing the airport, including: 1) participate in regional planning efforts led by SANDAG to determine transit connections between regional transit and the airport terminals, freeway connections along the Laurel Street corridor, intelligent transportation systems, and mobility hub improvements/strategies; and 2) participate in the implementation of improvements and strategies identified in the Airport Connectivity Analysis. However, the improvements were considered infeasible because parts of the mitigation measures are within the control of other agencies or jurisdictions. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-I-23	33	Pacific Hwy/ Sassafras St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a second eastbound through lane and restriping the southbound approach to provide a left-turn lane, three through lanes, and a right-turn lane to add capacity to the intersection, though the additional capacity continued to result in LOS E operations rendering the impact not fully mitigated. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-I-24	34	Pacific Hwy / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the removal of a westbound through land and addition of a second eastbound left-turn lane, conversion of a southbound through lane into a second right-turn lane, and re-coordination of the signals along Laurel Street. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. Implementation of these improvements in the Airport Development Plan showed the intersection would continue to operate at poor LOS conditions rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-25	35	Harbor Dr / Laurel St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a third eastbound left-turn lane and removal of an eastbound through lane to add capacity to the intersection, though the additional capacity continued to result in poor LOS operations rendering the impact not fully mitigated. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Alt 5-I-26	36	Pacific Hwy / Sea World Dr	San Diego	There are no planned improvements in the Mission Bay Park Master Plan at this intersection. In order to improve operations at this intersection, the Proposed Action alternative should construct an additional southbound left-turn lane from SeaWorld Drive to eastbound Pacific Highway. Implementation of this improvement would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
STREET SEGMENTS					
		Rosecrans Street			
Alt 5-S-1	1	Dewey Rd to Lytton St	San Diego	Per the Peninsula Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a five-lane Collector with a center left-turn lane with a LOS E capacity of 37,500 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 2,500 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-2	2	Lytton St to Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-3	3	Midway Dr to Sports Arena Blvd	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-4	4	Sports Arena Blvd to Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-S-5	5	E: Kurtz St to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a s four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Taylor Street			
Alt 5-S-6	9	Presidio Dr to I-8 East Ramp	San Diego	There are no planned improvements in the Old Town Community Plan along this street segment. Additional lanes are needed on Taylor Street to increase the capacity along this roadway. However, due to the historic nature of the Old Town Community, the Community Plan does not propose any road widenings or significant capacity improvements. Additionally, there is not enough right-of-way available along this segment of Taylor Street to accommodate two additional through lanes and a center median while maintaining a Class II bicycle facility. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Pacific Highway			
Alt 5-S-7	11	SeaWorld Dr to Taylor St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge would be infeasible. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-S-8	13	Kurtz St to Sports Arena Blvd	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Although the interchange project improves operations along Pacific Highway, the daily volumes on this segment of Pacific Highway would continue to exceed the capacity of the roadway. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-12	17	W. Washington St to Sassafras St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Morena Boulevard			
Alt 5-S-13	19	Friars Rd to I-8	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Morena Boulevard to increase the capacity along this roadway. Due to the lack of available right-of-way and this roadway serving as a bridge over the environmentally sensitive San Diego River, widening the bridge to four lanes would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Linda Vista Road			

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-S-14	20	Morena Blvd to Colusa St	San Diego	Per the Linda Vista Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Linda Vista Road currently functions as a four-lane Collector with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Road with a raised median with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Kurtz Street			
Alt 5-S-15	21	Rosecrans to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Kurtz Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Sports Arena Blvd			
Alt 5-S-16	25	Rosecrans St to Enterprise St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Sports Arena Boulevard currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Midway Drive			
Alt 5-S-17	26	East Dr to Rosecrans St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional capacity is needed on Midway Drive to improve operations along this roadway. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. Due to the lack of available right-of-way, widening the roadway to four-lane Major Arterial standards would be infeasible. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-S-18	27	Rosecrans St to Bogley Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-19	28	Bogley Dr to Barnett Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. With the improvements proposed along this street segment, the Community Plan reports LOS C results. However, the additional traffic added by the Proposed Action alternative degrades roadway operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact on this street segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Lytton Street			
Alt 5-S-20	29	Rosecrans St to St. Charles St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Lytton Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with an LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5

YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
		Barnett Avenue			
Alt 5-S-21	30	St. Charles St to Henderson Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a raised median with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Alt 5-S-22	31	Henderson Ave to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 30,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Hancock Street			
Alt 5-S-23	32	Old Town Ave to Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Hancock Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Collector with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. With the improvements proposed along this street segment, the Community Plan reports mid-LOS D results. However, the additional traffic added by the Proposed Action alternative degrades roadway operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 16–5
YEAR 2050 WITH ALTERNATIVE 5 SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Alt 5-S-24	33	Witherby St to Noell St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5; direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
		W. Washington Street			
Alt 5-S-25	37	Hancock St to W. University Ave	San Diego	There are no planned improvements in the Uptown Community Plan along this street segment. Additional lanes are needed on Washington Street to increase the capacity along this roadway. Widening this section of Washington Street requires substantial grading and filling on both sides of the roadway. On the south side, a steep grade abuts the shoulder. On the north side, a drainage ditch lies adjacent to the roadway. The physical constraints of widening this segment of Washington Street would render this impact significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
FREEWAYS					
Alt 5-F-1	2	I-5: I-8 to Old Town Ave	Caltrans	The SANDAG 2050 San Diego Forward: The Regional Plan identifies “operational improvements” along this freeway segment. The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

17.0 NEAR-TERM YEAR 2030 ANALYSIS

The following section presents the analysis of study area intersections, street segments, and freeway segments under Near-Term Year 2030 conditions. No changes to the street network over existing conditions were assumed in the analysis.

17.1 Peak Hour Intersection Operations

Intersection capacity analyses were conducted for the study intersections under Near-Term Year 2030 conditions. ***Table 17–1*** reports the intersection operations during peak hour conditions. The following intersections are calculated to operate at LOS E or F:

- Intersection #6 Rosecrans Street & Taylor Street / Pacific Highway – LOS E during the p.m. peak hour
- Intersection #7. Rosecrans Street / Jefferson Street – LOS F during the p.m. peak hour
- Intersection #8. Camino Del Rio W. / Hancock Street – LOS E during the p.m. peak hour
- Intersection #14. Lytton Street & Barnett Avenue / Truxtun Road – LOS E during the p.m. peak hour
- Intersection #18. Pacific Highway / Kurtz Street – LOS F during the p.m. peak hour
- Intersection #19. Pacific Highway / Sports Arena Boulevard – LOS F during the p.m. peak hour
- Intersection #20. Pacific Highway / Enterprise Street – LOS F during the a.m. and p.m. peak hours
- Intersection #23. Old Town Avenue / Moore Street – LOS F/E during the a.m./p.m. peak hours
- Intersection #26. Witherby Street / Pacific Highway – LOS E during the p.m. peak hour
- Intersection #33. Pacific Highway / Sassafras Street – LOS F/E during the a.m./p.m. peak hours
- Intersection #34. Pacific Highway / Laurel Street – LOS E during the a.m. and p.m. peak hours
- Intersection #35. Harbor Drive / Laurel Street – LOS E during the p.m. peak hour
- Intersection #38. Sea World Drive / I-5 NB Ramps – LOS E during the p.m. peak hour

Appendix V contains the intersection analysis worksheets for the Near-Term Year 2030 scenario.

17.2 Daily Street Segment Operations

Street segment analyses were conducted for roadways in the study area under Near-Term Year 2030 conditions. ***Tables 17–2*** reports the Near-Term Year 2030 street segment operations on a daily basis. The following segments are calculated to operate at LOS E or F:

- Street Segment #1. Rosecrans Street: Dewey Road to Lytton Street (LOS F)
- Street Segment #2. Rosecrans Street: Lytton Street to Midway Drive (LOS F)

- Street Segment #3. Rosecrans Street: Midway Drive to Sports Arena Boulevard (LOS F)
- Street Segment #4. Rosecrans Street: Sports Arena Boulevard Kurtz Street (LOS E)
- Street Segment #9. Taylor Street: Presidio Drive to I-8 East Ramp (LOS F)
- Street Segment #15. Pacific Highway: Barnett Avenue to Witherby Street (LOS E)
- Street Segment #16. Pacific Highway: Witherby Street to W. Washington Street (LOS E)
- Street Segment #19. Morena Boulevard: Friars Road to I-8 (LOS F)
- Street Segment #20. Linda Vista Road: Morena Boulevard to Colusa Street (LOS E)
- Street Segment #21. Kurtz Street: Rosecrans Street to St. Charles Street (LOS F)
- Street Segment #26. Midway Drive: East Drive to Rosecrans Street (LOS F)
- Street Segment #29. Lytton Street: Rosecrans Street to St. Charles Street (LOS E)
- Street Segment #30. Barnett Avenue: St. Charles Street to Henderson Avenue (LOS E)
- Street Segment #31. Barnett Avenue: Henderson Avenue to Pacific Highway (LOS F)
- Street Segment #32. Hancock Street: Old Town Avenue to Witherby Street (LOS F)
- Street Segment #34. Hancock Street: Noell Street to W. Washington Street (LOS F)
- Street Segment #35. W. Washington Street: Admiral Boland Way to Pacific Highway (LOS F)

17.3 Peak Hour Freeway Segment Operations

Freeway segment analyses were conducted in the study area under Near-Term Year 2030 conditions. ***Tables 17–3*** and ***17–4*** reports the Near-Term Year 2030 peak hour freeway segment operations. The following freeway segments are calculated to operate at LOS E or F:

- Freeway Segment #7. I-5: Laurel Street to Hawthorn Street, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)
- Freeway Segment #8. I-5: Hawthorn Street to 1st Avenue, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)
- Freeway Segment #9. I-5: 1st Avenue to 6th Avenue, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)
- Freeway Segment #10. I-5: 6th Avenue to SR-163, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)
- Freeway Segment #12. I-8: I-5 to Morena Boulevard, WB (LOS E – a.m. peak) an
- Freeway Segment #13. I-8: Morena Boulevard to Hotel Circle/Taylor Street, WB (LOS E – a.m. peak)
- Freeway Segment #14. I-8: Taylor Street to Hotel Circle, EB (LOS F – p.m. peak)
- Freeway Segment #15. I-8: Hotel Circle to SR-163, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)

Appendix W contains the detailed HCS calculations sheets for the Near-Term Year 2030.

17.4 Peak Hour Ramp Meter Operations

The Moore Street / NB I-5 on-ramp meter was analyzed under Near-Term Year 2030 conditions. ***Table 17–5*** reports the Near-Term Year 2030 ramp meter operations.

- Ramp Meter #1. Moore Street/ I-5 NB On-ramp – No delay and no queues during the a.m. peak hour and delay of 8 minutes and queue of 42 vehicles during the p.m. peak hour are calculated at the *Moore Street / NB I-5 On-Ramp* under Near-Term Year 2030 conditions.

As shown in *Section 17.1.3* above, the freeway mainline segment downstream of this on-ramp is calculated to operate at acceptable LOS D or better. Therefore, this on-ramp is expected to operate at an acceptable delay under Near-Term Year 2030 conditions.

Footnotes:

a. Mainline SOV lane geometry taken from PeMS lane configurations at corresponding postmile and validated against field observations.
b. See *Table 6–3* for K and D factors.
c. Passenger-car equivalent flow rate for peak 15-minute period (passenger-cars/hour/lane).
d. Per lane capacity adjusted for freeway segment geometry (passenger-cars/hour/lane).
e. V/C = (Peak Hour Volume/Hourly Capacity)
f. Density measures passenger cars per mile per lane. Density = Flow Rate (passenger-cars/hour/lane) ÷ Speed (average passenger-car speed in mph).
g. LOS = Level of Service

LOS	Density Range (pc/mi/ln)
A	0 – 11
B	> 11 – 18
C	> 18 – 26
D	> 26 – 35
E	> 35 – 45
F	> 45

General Notes:

1. Main = Mainline
2. Aux = Auxiliary
3. Truck factor sourced to most recent Caltrans Traffic Census Program *Peak Hour Volume Data* (2016).
4. "—" density exceeds the maximum threshold for LOS F.

Table 17–4
Near-Term Year 2030
Ramp Meter Operations

Location / Condition	Peak Hour	Peak Hour Flow (D) (veh/hr/ln) [a]	Calculated (Most Restrictive)				
			Discharge Rate (R) (veh/hr/ln) [b]	Excess Demand (E) (veh/hr/ln) [c]	Delay (min/ln) [d]	Queue [e]	
						Feet	Vehicles
1. Moore Street / NB I-5 On-Ramp							
Near-Term Year 2030						2 SOV	
	AM	325	335	0	0	0	0
	PM	360	318	42	8	1,050	42

Footnotes:

a. Peak Hour Flow “D” is the traffic that desires to enter the freeway at this on-ramp during the peak hour.

b. Discharge Rate “R” is the *most restrictive* rate at which the ramp meter (signal) discharges traffic on to the freeway (See *Appendix B* for the ramp meter data obtained from Caltrans).

c. Excess Demand “E” is the difference between the Peak Hour Flow and the Discharge Rate.

d. Delay in minutes per lane experienced by each vehicle, calculated as the ratio of the Excess Demand and the Peak Hour Flow in one minute.

e. Queue per lane is reported in feet and is calculated as 25 feet per vehicle.

General Note:

1. SOV – Single Occupancy Vehicle Lane

18.0 NEAR-TERM YEAR 2030 WITH ALTERNATIVE 2: HIGHER-DENSITY MIXED-USE REVITALIZATION (25%) ANALYSIS

The following section presents the analysis of study area intersections, street segments, freeway segments, and ramp meters under Near-Term Year 2030 conditions with the addition of 25% of Alternative 2: Higher-density Mixed-Use Revitalization traffic. No changes to the street network over existing conditions were assumed in the analysis. For the purposes of this study, impacts identified under Near-Term Year 2030 conditions are considered "direct" transportation impacts.

18.1 Peak Hour Intersection Operations

Intersection capacity analyses were conducted for the study intersections under Near-Term Year 2030 with Alternative 2: Higher-density Mixed-use Revitalization (25%) conditions. ***Table 18–1*** reports the intersection operations during peak hour conditions. The following intersections are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Intersection #6. Rosecrans Street & Taylor Street / Pacific Highway – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #7. Rosecrans Street / Jefferson Street – LOS F during the p.m. peak hour**
- Intersection #8. Camino Del Rio W. / Hancock Street – LOS E during the p.m. peak hour
- **Intersection #13. Rosecrans Street / Lytton Street – LOS E during the p.m. peak hour**
- **Intersection #14. Lytton Street & Barnett Avenue / Truxtun Road – LOS F during the p.m. peak hour**
- **Intersection #18. Pacific Highway / Kurtz Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #19. Pacific Highway / Sports Arena Boulevard – LOS F during the p.m. peak hour**
- **Intersection #20. Pacific Highway / Enterprise Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #23. Old Town Avenue / Moore Street – LOS F during the a.m. and p.m. peak hours**
- **Intersection #24. Old Town Avenue / Hancock Street – LOS F/E during the a.m./p.m. peak hours**
- **Intersection #25. Witherby Street / Hancock Street – LOS E/F during the a.m./p.m. peak hours**
- **Intersection #26. Witherby Street / Pacific Highway – LOS F during the p.m. peak hour**
- **Intersection #33. Pacific Highway / Sassafras Street – LOS F/E during the a.m./p.m. peak hours**
- Intersection #34. Pacific Highway / Laurel Street – LOS E during the a.m. and p.m. peak hours
- Intersection 35. Harbor Drive / Laurel Street – LOS E during the p.m. peak hour

- **Intersection #36. Pacific Highway / Sea World Drive – LOS E during the p.m. peak hour**
- Intersection #38. Sea World Drive / I-5 NB Ramps – LOS E during the p.m. peak hour

Based on the established significance criteria, **13 significant direct impacts** were calculated with the addition of Alternative 2 (25%) traffic at the intersections **bolded and underlined** above since the Proposed Action alternative-induced change in delay is greater than 2.0 seconds for LOS E operating intersections and greater than 1.0 second for LOS F operating intersections.

Appendix X contains the intersection analysis worksheets for the Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%) scenario.

18.2 Daily Street Segment Operations

Street segment analyses were conducted for roadways in the study area under Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%). ***Tables 18–2*** reports the Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%) street segment operations on a daily basis. The following segments are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Street Segment #1. Rosecrans Street: Dewey Road to Lytton Street (LOS F)**
- **Street Segment #2. Rosecrans Street: Lytton Street to Midway Drive (LOS F)**
- **Street Segment #3. Rosecrans Street: Midway Drive to Sports Arena Boulevard (LOS F)**
- **Street Segment #4. Rosecrans Street: Sports Arena Boulevard Kurtz Street (LOS E)**
- **Street Segment #9. Taylor Street: Presidio Drive to I-8 East Ramp (LOS F)**
- **Street Segment #15. Pacific Highway: Barnett Avenue to Witherby Street (LOS F)**
- **Street Segment #16. Pacific Highway: Witherby Street to W. Washington Street (LOS E)**
- Street Segment #19. Morena Boulevard: Friars Road to I-8 (LOS F)
- Street Segment #20. Linda Vista Road: Morena Boulevard to Colusa Street (LOS E)
- **Street Segment #21. Kurtz Street: Rosecrans Street to Pacific Highway (LOS F)**
- Street Segment #26. Midway Drive: East Drive to Rosecrans Street (LOS F)
- **Street Segment #28. Midway Drive: Bogley Drive to Barnett Avenue (LOS E)**
- Street Segment #29**.** Lytton Street: Rosecrans Street to St. Charles Street (LOS E)
- **Street Segment #30. Barnett Avenue: St. Charles Street to Henderson Avenue (LOS F)**
- **Street Segment #31. Barnett Avenue: Henderson Avenue to Pacific Highway (LOS F)**
- **Street Segment #32. Hancock Street: Old Town Avenue to Witherby Street (LOS F)**
- Street Segment #34. Hancock Street: Noell Street to W. Washington Street (LOS F)
- Street Segment #35. W. Washington Street: Admiral Boland Way to Pacific Highway (LOS F)

Based on the established significance criteria, **12 significant direct impacts** were calculated with the addition of Alternative 2 (25%) traffic at the locations **bolded and underlined** above, since the Proposed Action alternative-induced change in V/C is greater than 0.02 for LOS E operating street segments and greater than 0.01 for LOS F operating street segments.

18.3 Peak Hour Freeway Segment Operations

Freeway segments were analyzed under the Near-Term Year 2030 with Alternative 2: Higher-density Mixed-use Revitalization (25%) conditions. ***Tables 18–3*** and ***18–4*** report the Near-Term Year 2030 with Alternative 2: Higher-density Mixed-use Revitalization (25%) freeway segment operations during the a.m. and p.m. peak hours, respectively. The following freeway segments are calculated to operate at LOS E or F with the addition of the Proposed Action alternative:

- **Freeway Segment #6. I-5: Pacific Highway Viaduct to Laurel Street, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)**
- **Freeway Segment #7. I-5: Laurel Street to Hawthorn Street, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)**
- **Freeway Segment #8. I-5: Hawthorn Street to 1st Avenue, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)**
- **Freeway Segment #9. I-5: 1st Avenue to 6th Avenue, SB (LOS E – a.m. peak) and NB/SB (LOS E – p.m. peak)**
- **Freeway Segment #10. I-5: 6th Avenue to SR-163, SB (LOS E – a.m. peak) and SB (LOS E – p.m. peak)**
- Freeway Segment #12. I-8: I-5 to Morena Boulevard, WB (LOS E – a.m. peak)
- Freeway Segment #13. I-8: Morena Boulevard to Hotel Circle/Taylor Street, WB (LOS E – a.m. peak)
- **Freeway Segment#14. I-8: Taylor Street to Hotel Circle, EB (LOS F – p.m. peak)**
- **Freeway Segment#15. I-8: Hotel Circle to SR-163, WB (LOS E – a.m. peak) and EB (LOS F – p.m. peak)**

Based on the established significance criteria, **seven significant cumulative impacts** were calculated with the addition of Alternative 2 traffic on study area freeway segments since the Proposed Action alternative-induced change in V/C is greater than 0.01 for LOS E operating freeway segments and greater than 0.005 for LOS F operating freeway segments

Appendix Y contains the detailed HCS calculations sheets for the Near-Term Year 2030 with Alternative 2: Higher-density Mixed-use Revitalization (25%) scenario.

18.4 Peak Hour Ramp Meter Operations

The Moore Street / NB I-5 On-ramp meter was analyzed under Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%) conditions. ***Table 18–5*** reports the

Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%) conditions ramp meter operations.

- **Ramp Meter #1. Moore Street / I-5 NB On-ramp** – Delays of 10/17 minutes and queues of 55/90 vehicles during the a.m. / p.m. peak hours are calculated.at the *Moore Street / NB I-5 On-Ramp* under Near-Term Year 2030 with Alternative 2: Higher-density Mixed-Use Revitalization (25%) conditions.

Based on the established significance criteria, **one (1) significant cumulative impact** was calculated with the addition of Alternative 2: Higher-density Mixed-use Revitalization (25%) traffic at the location **bolded and underlined** above since the total delay at this on ramp is more than 15 minutes during the p.m. peak hour and the increase in delay due to the Proposed Action traffic is greater than 2.0 minutes during the a.m. and p.m. peak hours

Footnotes:

a. The capacity of the roadway at Level of Service E.
b. Level of Service.
c. The Volume to Capacity ratio.
d. Increase in V/C ratio due to the addition of Proposed Action traffic.

General Notes:

1. Sig = Significant impact, yes or no.
2. **Bold** typeface and shading represent a significant impact.

Footnotes:

a. Mainline SOV lane geometry taken from PeMS lane configurations at corresponding postmile and validated against field observations.
b. See *Table 6–3* for K and D factors.
c. Passenger-car equivalent flow rate for peak 15-minute period (passenger-cars/hour/lane).
d. Per lane capacity adjusted for freeway segment geometry (passenger-cars/hour/lane).
e. V/C = (Peak Hour Volume/Hourly Capacity)
f. Density measures passenger cars per mile per lane. Density = Flow Rate (passenger-cars/hour/lane) ÷ Speed (average passenger-car speed in mph).
g. Level of Service
h. "Δ" denotes the Proposed Action-induced increase in V/C. Per City Guidelines, a significant impact occurs when the V/C is increased by greater than 0.01 for LOS E and 0.005 for LOS F.

LOS	Density Range (pc/mi/ln)
A	0 – 11
B	> 11 – 18
C	> 18 – 26
D	> 26 – 35
E	> 35 – 45
F	> 45

General Notes:

1. M = Mainline
2. A = Auxiliary
3. Sig? = Significant impact, yes or no. **Bold** typeface and shading represent a significant impact.
4. "—" Indicates density exceeds the maximum threshold for LOS F.

Δ	**AM**			**55**	**10**	**1,363**	**55**
	PM			**48**	**9**	**1,200**	**48**

Footnotes:

a. Peak Hour Flow "D" is the traffic that desires to enter the freeway at this on-ramp during the peak hour.

b. Discharge Rate "R" is the *most restrictive* rate at which the ramp meter (signal) discharges traffic on to the freeway (See *Appendix B* for the ramp meter data obtained from Caltrans).

c. Excess Demand "E" is the difference between the Peak Hour Flow and the Discharge Rate.

d. Delay in minutes per lane experienced by each vehicle, calculated as the ratio of the Excess Demand and the Peak Hour Flow in one minute.

e. Queue per lane is reported in feet and is calculated as 25 feet per vehicle.

General Notes:

1. SOV – Single Occupancy Vehicle Lane
2. Δ – Increase in delay and queue length due to the Proposed Action.
3. **Bold** typeface and shading represent a significant impact.

18.5 Significant Impacts and Mitigation Measures

Year 2030 Alternative 2 (25%) results significant direct impacts under this Proposed Action alternative. Year 2030 Alternative 2: Higher-density Mixed-use Revitalization (25%) would have significant direct impacts at **13** intersections, **12** street segments, **seven (7)** freeways segments, and **one (1)** freeway ramp meter.

Physical mitigation measures are recommended for locations impacted by the Proposed Action alternative to reduce impacts to less than significant. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange that would improve access to the OTC Site as well as reduce area traffic on local streets. This network improvement is proposed as mitigation for several impacted locations. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5 (only under the Alternative 4 and Alternative 5 scenarios where the transit center is consolidated on the OTC Site); direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. A concept plan showing this improvement is depicted later on in *Section 29.0* of this report.

For locations where improvements have been deemed unavoidable either due to physical constraints, right-of-way constraints, or jurisdictional constraints and where the reconstructed interchange would not fully mitigate, it is recommended that the Proposed Action alternative contribute to the implementation of Transportation Systems Management (TSM) technology to improve traffic operations along various corridors. The City of San Diego includes future traffic signal communication network elements in their Traffic Signal Communications Master Plan (2014). Part of the Master Plan would be to implement an Intelligent Transportation Systems (ITS) program on key transportation corridors within the City. ITS is a fully responsive system that can be used to benefit all modes of travel including motorists, bicyclists, pedestrians, transit and emergency vehicles. The recommendation to contribute to implementation of ITS measures for locations where significant impacts are unavoidable is included below.

Additionally, implementation of Transportation Demand Management (TDM) measures by individual projects within the OTC Site as they are developed would reduce vehicular traffic and help lessen traffic impacts on study area intersections, street segments, and freeway segments. A TDM plan is a valuable tool to reducing single-occupancy vehicle (SOV) trips and therefore recommended for the Proposed Action alternatives. Further details on TDM and TSM measures are provided later on in *Sections 27.0 and 28.0* of this report, respectively.

Table 18–5 lists the significantly impacted locations and proposed mitigation measures.

Figure 18–1 shows an illustration of the significantly impacted locations.

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
INTERSECTIONS					
Year 2030 Alt 2-I-1	6	Pacific Hwy/ Rosecrans St/ Taylor St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes to provide a second southbound left-turn lane, a westbound right-turn overlap phase, and a second northbound right-turn lane. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance. Alternatively, together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-I-2	7	Rosecrans St/ Jefferson St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Installation of a traffic signal at this intersection would improve operations at this intersection. However, the intersection is located within close proximity to the Rosecrans Street/Taylor Street/ Pacific Highway signalized intersection (350 feet) which would be less than ideal for installing a signal and it would not be expected that the intersection would meet signal warrants given the very low minor street volumes on Jefferson Street. The provision of an additional signal on this segment of Rosecrans Street where heavy through traffic is observed would not be beneficial to the major street traffic flow. Based on these findings, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-I-3	13	Rosecrans St/ Lytton St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection. The Community Plan proposes right-turn overlap phasing in the northbound, southbound, and westbound directions. A second eastbound left-turn lane is proposed. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 18–5

YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-I-4	14	Truxtun Rd/ Lytton St/ Barnett Ave	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. Constructing an eastbound dedicated right-turn lane within the existing curb-to-curb width would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-I-5	18	Pacific Hwy/ Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to signalize the intersection and allow eastbound left-turn movements. With the improvements proposed at this intersection, the Community Plan reports high LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Community Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-I-6	19	Sports Arena Blvd/ Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to relocate the intersection 500 feet to the north of its current location. Improvements to realign Sports Arena Boulevard to create a right-angle with Pacific Highway are planned, as well as signalizing the intersection, providing an exclusive eastbound left-turn lane from Sports Arena Boulevard onto Pacific Highway and providing a northbound left-turn lane from Pacific Highway onto Sports Arena Boulevard. With the improvements proposed at this intersection, the Community Plan reports LOS C results. With the additional traffic added by the Proposed Action alternative, acceptable LOS operations would continue to occur. Therefore, it is recommended the Proposed Action alternative implement the Community Plan improvements to mitigate the impact to below a level of significance.	Yes

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-I-7	20	Pacific Hwy/ Enterprise St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan at this intersection. This intersection currently serves as an access point for the existing NAVWAR OTC Site. With future development of the Proposed Action alternative, this intersection would likely be improved to provide additional lanes entering/exiting the site. However, additional lanes would be needed on Pacific Highway. Any widening to Pacific Highway would be infeasible due to lack of right-of-way. Therefore, the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-I-8	22	Old Town Ave/ San Diego Ave	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. The intersection is built out with regard to available right-of-way. Extra lanes on intersection approaches are needed to improve operations at this intersection. However, given the lack of available right-of-way, widening at this intersection is infeasible. Therefore, no improvements are recommended and the impact at this intersection remains significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-I-9	23	Old Town Ave/ Moore St	San Diego	Per the Old Town Community Plan, improvements are recommended at this intersection. The Community Plan recommends signal phasing be changed from permissive to protected and to add exclusive left-turn lanes on Old Town Avenue approaching the intersection. However, the Community Plan concludes there is no available right-of-way to complete the improvements. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Moore Street intersection that effectively operates as the I-5 North interchange with Old Town Avenue. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-I-10	24	Hancock St/ Old Town Ave/ I-5 SB Off-Ramps	San Diego	There are no planned improvements in the Old Town Community Plan at this intersection. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. Additional capacity would be added to the interchange that would improve operations at the Old Town Avenue/ Hancock Street intersection that effectively operates as the I-5 southbound off-ramp with Old Town Avenue and Hancock Street. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-I-11	25	Witherby St/ Hancock St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned at this intersection to reconfigure the existing geometry. The Community Plan proposes to widen the northbound approach to provide one shared through/right-turn lane and one shared through/left-turn lane. With the improvements proposed at this intersection, the Community Plan reports low LOS D results. However, the additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-I-12	33	Pacific Hwy/ Sassafras St	San Diego	Per the Airport Development Plan, improvements are recommended at this intersection. The Airport Development Plan recommends the addition of a second eastbound through lane and restriping the southbound approach to provide a left-turn lane, three through lanes, and a right-turn lane to add capacity to the intersection, though the additional capacity continued to result in LOS E operations rendering the impact not fully mitigated. In addition, it recommends a Class IV Cycle Track be striped on Pacific Highway. The additional traffic added by the Proposed Action alternative would degrade intersection operations to significant levels. Any improvements beyond those recommended in the Airport Development Plan are physically infeasible given the lack of available right-of-way. Therefore, it is recommended the Proposed Action alternative implement the Airport Development Plan improvements, where feasible, and the impact at this intersection will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-I-13	36	Pacific Hwy / Sea World Dr	San Diego	There are no planned improvements in the Mission Bay Park Master Plan at this intersection. In order to improve operations at this intersection, the Proposed Action alternative should construct an additional southbound left-turn lane from SeaWorld Drive to eastbound Pacific Highway. Implementation of this improvement would mitigate the impact to below a level of significance.	Yes
STREET SEGMENTS					
		Rosecrans Street			
Year 2030 Alt 2-S-1	1	Dewey Rd to Lytton St	San Diego	Per the Peninsula Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a five-lane Collector with a center left-turn lane with a LOS E capacity of 37,500 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 2,500 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-S-2	2	Lytton St to Midway Dr	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes

TABLE 18–5

YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-S-3	3	Midway Dr to Sports Arena Blvd	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a six-lane Major Arterial with a LOS E capacity of 50,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-S-4	4	Sports Arena Blvd to Kurtz St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Rosecrans Street currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Taylor Street			
Year 2030 Alt 2-S-5	9	Presidio Dr to I-8 East Ramp	San Diego	There are no planned improvements in the Old Town Community Plan along this street segment. Additional lanes are needed on Taylor Street to increase the capacity along this roadway. However, due to the historic nature of the Old Town Community, the Community Plan does not propose any road widenings or significant capacity improvements. Additionally, there is not enough right-of-way available along this segment of Taylor Street to accommodate two additional through lanes and a center median while maintaining a Class II bicycle facility. Therefore, the impact would remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report and participate in the implementation of TSM measures described in *Section 28.0*. These measures will partially mitigate this significant impact.	No
		Pacific Highway			

TABLE 18–5

YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-S-6	15	Barnett Ave to Witherby St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-S-7	16	Witherby St to W. Washington St	San Diego	There are no planned improvements in the Midway-Pacific Highway Community Plan along this street segment. Additional lanes are needed on Pacific Highway to increase the capacity along this roadway. Widening Pacific Highway would be in conflict with the Community Plan. Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
		Kurtz Street			
Year 2030 Alt 2-S-8	21	Rosecrans to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Kurtz Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a two-lane Collector with a center left-turn lane with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Midway Drive			

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-S-9	28	Bogley Dr to Barnett Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Midway Drive currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Barnett Avenue			
Year 2030 Alt 2-S-10	30	St. Charles St to Henderson Ave	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a raised median with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Major Arterial with a LOS E capacity of 40,000 ADT. This results in an additional 10,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
Year 2030 Alt 2-S-11	31	Henderson Ave to Pacific Hwy	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Barnett Avenue currently functions as a four-lane Collector with a center left-turn lane with a LOS E capacity of 30,000 ADT. The Community Plan classifies this segment of the roadway as a six-lane Prime Arterial with a LOS E capacity of 60,000 ADT. This results in an additional 30,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance.	Yes
		Hancock Street			

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-S-12	32	Old Town Ave to Witherby St	San Diego	Per the Midway-Pacific Highway Community Plan, improvements are planned along this street segment to reconfigure the existing geometry. This segment of Hancock Street currently functions as a two-lane Collector with a LOS E capacity of 8,000 ADT. The Community Plan classifies this segment of the roadway as a four-lane Collector with a LOS E capacity of 15,000 ADT. This results in an additional 7,000 ADT of capacity over existing conditions. Implementation of the Community Plan improvements would mitigate the impact to below a level of significance. Alternatively, together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate the impact to below a level of significance.	Yes
FREEWAYS					
Year 2030 Alt 2-F-1	6	I-5: Pacific Hwy Viaduct to Laurel St	Caltrans	The SANDAG 2050 San Diego Forward: The Regional Plan identifies "operational improvements" along this freeway segment. The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-F-2	7	I-5: Laurel St to Hawthorn St	Caltrans	The SANDAG 2050 San Diego Forward: The Regional Plan identifies "operational improvements" along this freeway segment. The improvements are anticipated to be completed by the Year 2050, however, there is uncertainty to the actual improvements and sources of funding. Therefore, the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

TABLE 18–5
YEAR 2030 WITH ALTERNATIVE 2 (25%) SIGNIFICANT IMPACTS AND MITIGATION MEASURES

ID	#	Location	Jur.	Mitigation Measures	Mit.? (Y/N)
Year 2030 Alt 2-F-6	14	I-8: Hotel Circle/Taylor St to Hotel Circle	Caltrans	An Interstate 8 Corridor Study (preliminary draft dated August 2016) was jointly prepared by SANDAG and Caltrans that analyzed transportation alternatives on I-8 between Nimitz Boulevard and Lake Murray Boulevard to meet future regional and local demand. The Corridor Study recommended several improvements on I-8 within the study area that included reconfiguration of on-ramps and off-ramps at Hotel Circle North and South, Taylor Street interchange among others. The Mission Valley Community Plan also includes several new roadways such as Street J, Street U and a new freeway overpass I-8. However, while both the Corridor Study and the Mission Valley Community Plan reviewed several conceptual alternatives, both studies did not include detailed engineering feasibility drawings, cost estimates or other analyses to ultimately identify a preferred alternative or improvement. Therefore, potential and unplanned freeway improvements are not physically feasible and the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No
Year 2030 Alt 2-F-7	15	I-8: Hotel Circle to SR-163	Caltrans	An Interstate 8 Corridor Study (preliminary draft dated August 2016) was jointly prepared by SANDAG and Caltrans that analyzed transportation alternatives on I-8 between Nimitz Boulevard and Lake Murray Boulevard to meet future regional and local demand. The Corridor Study recommended several improvements on I-8 within the study area that included reconfiguration of on-ramps and off-ramps at Hotel Circle North and South, Taylor Street interchange among others. The Mission Valley Community Plan also includes several new roadways such as Street J, Street U and a new freeway overpass I-8. However, while both the Corridor Study and the Mission Valley Community Plan reviewed several conceptual alternatives, both studies did not include detailed engineering feasibility drawings, cost estimates or other analyses to ultimately identify a preferred alternative or improvement. Therefore, potential and unplanned freeway improvements are not physically feasible and the impact on this freeway segment will remain significant and unavoidable. Given that the impact at this location remains significant and unavoidable, it is recommended the Proposed Action alternative prepare a TDM plan as outlined in *Section 27.0* of this report to reduce overall vehicular traffic. These measures will partially mitigate this significant impact.	No

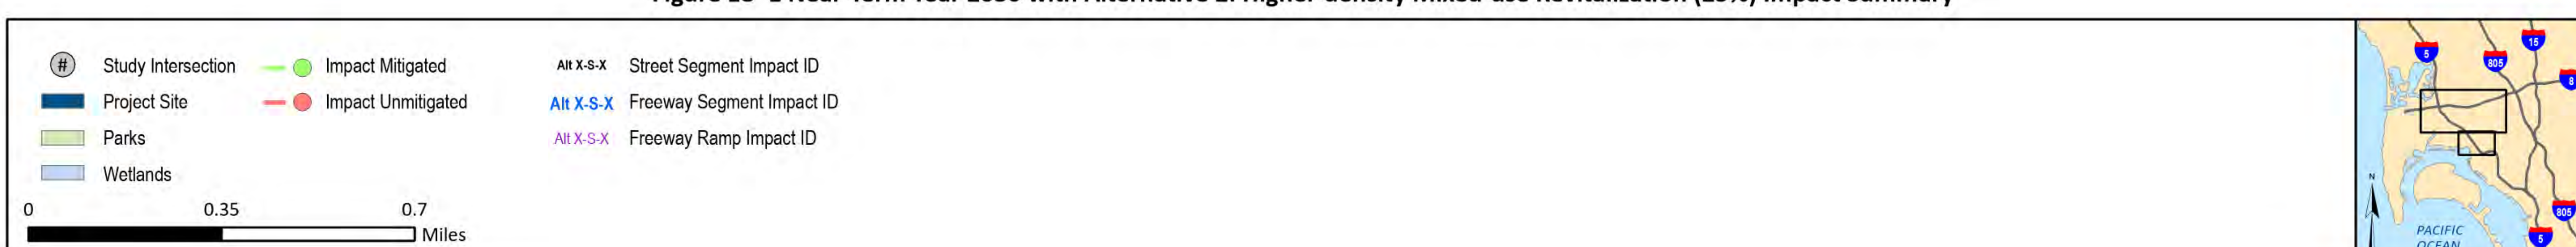
Figure 18–1 Near-Term Year 2030 with Alternative 2: Higher-density Mixed-use Revitalization (25%) Impact Summary



19.0 PEDESTRIAN MOBILITY

The Midway-Pacific Highway Community Plan envisions a public realm that provides attractive and comfortable pedestrian facilitates to connect communities and to improve the community's environment and image. Bicycle mobility will continue to evolve as a more viable option to auto use. The development of a safe, comfortable, and well-connected bicycle network that will make bicycling an attractive mode of transportation is the vision of the Midway-Pacific Highway Community Plan.

As part of this local pedestrian mobility assessment, the existing pedestrian facilities and key deficiencies within a ½ mile walking distance from the Proposed Action alternatives are documented, and the effects of the Proposed Action alternatives on the pedestrian network were evaluated.

19.1 Existing Pedestrian Conditions

A detailed pedestrian network inventory was conducted within a minimum of ½ mile walking distance from the Proposed Action alternatives site. ***Figure 19–1*** shows the existing pedestrian network in the area, which includes identifying dedicated pedestrian bridges missing sidewalks.

19.1.1 *Existing Pedestrian Demand*

Existing pedestrian counts were collected at the study intersections during the commuter a.m. and p.m. peak hours. The combined a.m. and p.m. pedestrian counts were calculated, and every study intersection was categorized as low activity, average activity, or high activity. This represents a measure of activity relative to the study area. ***Figure 19–2*** shows the existing pedestrian activity for the study area.

The following study intersections were observed as "high" pedestrian activity locations:

Intersection #5. Taylor Street / Congress Street
Intersection #6. Rosecrans Street / Taylor Street / Pacific Highway
Intersection #7. Rosecrans Street / Jefferson Street
Intersection #10. Rosecrans Street / Kurtz Street
Intersection #11. Rosecrans Street / Sports Arena Boulevard
Intersection #20. Pacific Highway / Enterprise Street
Intersection #22. Old Town Avenue / San Diego Avenue
Intersection #28. Hancock Street / Noell Street
Intersection #30. Washington Street / Hancock Street
Intersection #31. Pacific Highway (N) / Frontage Road / Washington Street

19.2 Planning Documents Review

A review of planning documents such as the *City of San Diego Pedestrian Master Plan*, *Midway-Pacific Highway Community Plan*, *Midway-Pacific Highway Impact Fee Study*, *Old Town San*

Diego Community Plan, Old Town San Diego Impact Fee Study, Capital Improvements Program and *Regional Transportation Improvement Program* was conducted.

Based on a review the planning documents, pedestrian sidewalk facilities are classified based on the pedestrian route type definitions as further described in ***Table 19–1***.

TABLE 19–1
PEDESTRIAN ROUTE TYPES

Class Description	Example Graphic
Route Type 1 - District Sidewalks District sidewalks run along roads that support heavy pedestrian levels in mixed-use concentrated urban areas. Usually, the district is an urbanized area with special functions, such as theater districts, office parks, shopping centers, or college campuses. The location of the district may be adjacent to neighborhoods, but these routes can be distinguished easily by adjacent uses, densities and urban form. It has an identifiable focus that provides orientation and character, and reinforces a sense of community among users by encouraging walking.	Route Type 2 - Corridor Sidewalks Corridor sidewalks run along roads that support moderate density business and shopping districts with moderate pedestrian levels. They can range from wide walks along boulevards to small sidewalks along a heavily auto-oriented roadway. They may connect moderate to high-density residential areas, but only if they are located along major arterials.	Route Type 3 - Connector Sidewalks Connector sidewalks tend to have low pedestrian levels and are along roads with moderate to high average vehicular traffic. Connector sidewalks tend to belong and, in some cases, do not have accessible land uses directly adjacent to the sidewalk. This can include sidewalks along major arterials that run parallel to open space and canyon lands. Often, they are along land uses that require buffering from the street noise, resulting in noise walls that further isolate the pedestrian from the adjacent land uses. These sidewalks have limited pedestrian use levels typically because of their remoteness and lack of nearby destinations. Often they can lead to nowhere, with the sidewalk stopping a distance away from other uses, typically where topography restricts the width of the road or where a development ends its improvements. Without the existence of these walkways, the pedestrian may be forced to walk in a high speed and high volume street.	(continued on Next Page)	

TABLE 19–1
PEDESTRIAN ROUTE TYPES

Class Description	Example Graphic
(continued from Previous Page)	
Route Type 4 - Neighborhood Sidewalks Neighborhood sidewalks run along roads that support low to moderate density housing with low to moderate pedestrian levels. Neighborhood streets and their associated walkways are generally lower volume streets, with low to moderate widths, single lanes in each direction and posted (prima facie) speed limits of 25 miles per hour. They are not as difficult to cross as a pedestrian and pedestrian collisions occur less frequently because the driver has ample time to see, react and brake. Speeding on these streets does occur and can result in pedestrian collisions. However, most physical design changes are not as likely to reduce these pedestrian collisions since they result from careless behavior.	Route Type 5 - Ancillary Pedestrian Facilities These are facilities away from or crossing over streets such as plazas, paseos, promenades, courtyards or pedestrian bridges and stairways. Many of these ancillary facilities attract local residents and workers and therefore generate moderate to high pedestrian use.	Route Type 6 – Paths Paths are paved facilities with exclusive right-of-ways that act as corridors and have little or no vehicular cross flows. Many of these paths are exclusive to pedestrians and bicycles and are not associated with streets. Paths defined by the Pedestrian Master Plan are often associated with recreational uses. Many of these paths can be found in parks, near open space preserves and away from streets in residential areas. They are defined in this plan as being paved, away from a street edge and not shared with vehicles (except for emergency or maintenance vehicles). They are often shared with runners, skaters, cyclists and other recreational users.	Route Type 7 – Trails Trails are unpaved walkways or roads used for recreational use or open space maintenance are classified as Trails. Trails are separated from roads and support activities such as hiking, biking and walking primarily through parks and open space. They differ from paths in that they are not paved with concrete or asphalt. Only authorized vehicles are permitted to access these trails, which in many cases are not ADA-compliant. Trails are not included in this study, but are defined to present all levels of pedestrian walkways. The San Diego Trails Master Plan and other Park Master Plans should be consulted for guidance on unpaved trails.	
Source: Midway-Pacific Highway Community Plan

19.3 Recommended Pedestrian Network Improvements

Based on the review of the existing pedestrian network, planning documents and transportation impacts, two tiers of pedestrian improvements are recommended.

<u>Tier 1: The following are pedestrian improvement recommendations that shall be implemented by the Proposed Action alternatives as mitigation measures:</u>

P-1. Pacific Highway, between Old Town Transit Center Driveway and Witherby Street

- Upgrade the sidewalk classification on the east side of Pacific Highway, between Old Town Transit Center Driveway and Witherby Street to a corridor sidewalk classification for Proposed Action Alternatives 2 and 3 and district sidewalk classification for Proposed Action Alternative 4 and 5.

P-2. Sports Arena Boulevard, between Rosecrans Street and Pacific Highway

- Install missing sidewalks per connector sidewalk classification on both sides of Sports Arena Boulevard, between Rosecrans Street and Pacific Highway.

P-3. Midway Drive, between Rosecrans Street and Barnett Avenue

- Install missing sidewalks per connector or corridor sidewalk classifications on the north side of Midway Drive, between Rosecrans Street and Barnett Avenue.

P-4. Witherby Street, between Pacific Highway and Hancock Street

- Install missing sidewalks per connector sidewalk classification on the west side of Witherby Street, between Pacific Highway and Hancock Street.

P-5. Sports Arena Boulevard / Rosecrans Street Intersection

- Conduct a feasibility assessment of the pedestrian improvements shown in Figure 3-15 of the *Midway-Pacific Highway Community Plan* (see ***Appendix Z***). A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.

P-6. Pacific Highway / Witherby Street Intersection

- Conduct a feasibility assessment of the pedestrian improvements shown Figure 3-16 of the *Midway-Pacific Highway Community Plan* (see *Appendix Z*). A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.

P-7. Midway Drive / Enterprise Street Intersection

- Conduct a feasibility assessment of the pedestrian improvements described in Page 13 of the *Midway-Pacific Impact Fee Study* (see *Appendix Z*). A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.

P-8. Barnett Avenue / Midway Drive Intersection

- Conduct a feasibility assessment of the pedestrian improvements shown in Figure 3-13 of the *Midway-Pacific Highway Community Plan* (see ***Appendix Z***). A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.

<u>Tier 2: The following are pedestrian improvement recommendations that should be considered to enhance offsite accessibility within a ½ mile walking distance to the site:</u>

P-9. Hancock Street, between Old Town Avenue and approximately 440 feet east of Witherby Street.

- Install missing sidewalks per connector sidewalk classification on both sides of Hancock Street, between Old Town Avenue and approximately 440 feet east of Witherby Street.

P-10. Pacific Highway, between Tripoli Avenue and approximately 280 feet west of W. Washington Street.

- Install missing sidewalks per connector sidewalk classification on the south side of Pacific Highway, between Tripoli Avenue and approximately 280 feet west of W. Washington Street.

P-11. Jessop Lane, between Enterprise Street and Barnett Avenue

- Install missing sidewalks on both sides of Jessop Lane, between Enterprise Street and Barnett Avenue.

P-12. Kurtz Street, between Rosecrans Street and Pacific Highway

- Install missing sidewalks per connector sidewalk classification on both sides of Kurtz Street, between Rosecrans Street and Pacific Highway.

P-13. Smith Street, between Pacific Highway and Kurtz Street

- Install missing sidewalks on both sides of Smith Street, Between Pacific Highway and Kurtz Street.

P-14. Old Town Transit Center Driveway

- Install missing sidewalks on south side of Old Town Transit Center Driveway off Pacific Highway.

Figure 19–3 shows the Tier 1 Recommended Pedestrian Improvements.

19.4 Other Recommendations

Walking is a fundamental component of the Proposed Action alternatives given the proposed mixed-land use characteristics as well as surrounding influences. It is also the most fundamental transportation mode since it is part of every trip. As such, it is recommended to prepare a Pedestrian Master Plan for the Proposed Action alternatives that will guide design and implementation of policies/programs to enhance access and mobility around and within the site for pedestrians of all ages and abilities.

The Pedestrian Master Plan would include, but is not limited to, the following elements:

- Design standards and guidance
- ADA Compliance
- Walkability and mobility
- Feasibility and social assessments
- Wayfinding
- Policies and programs

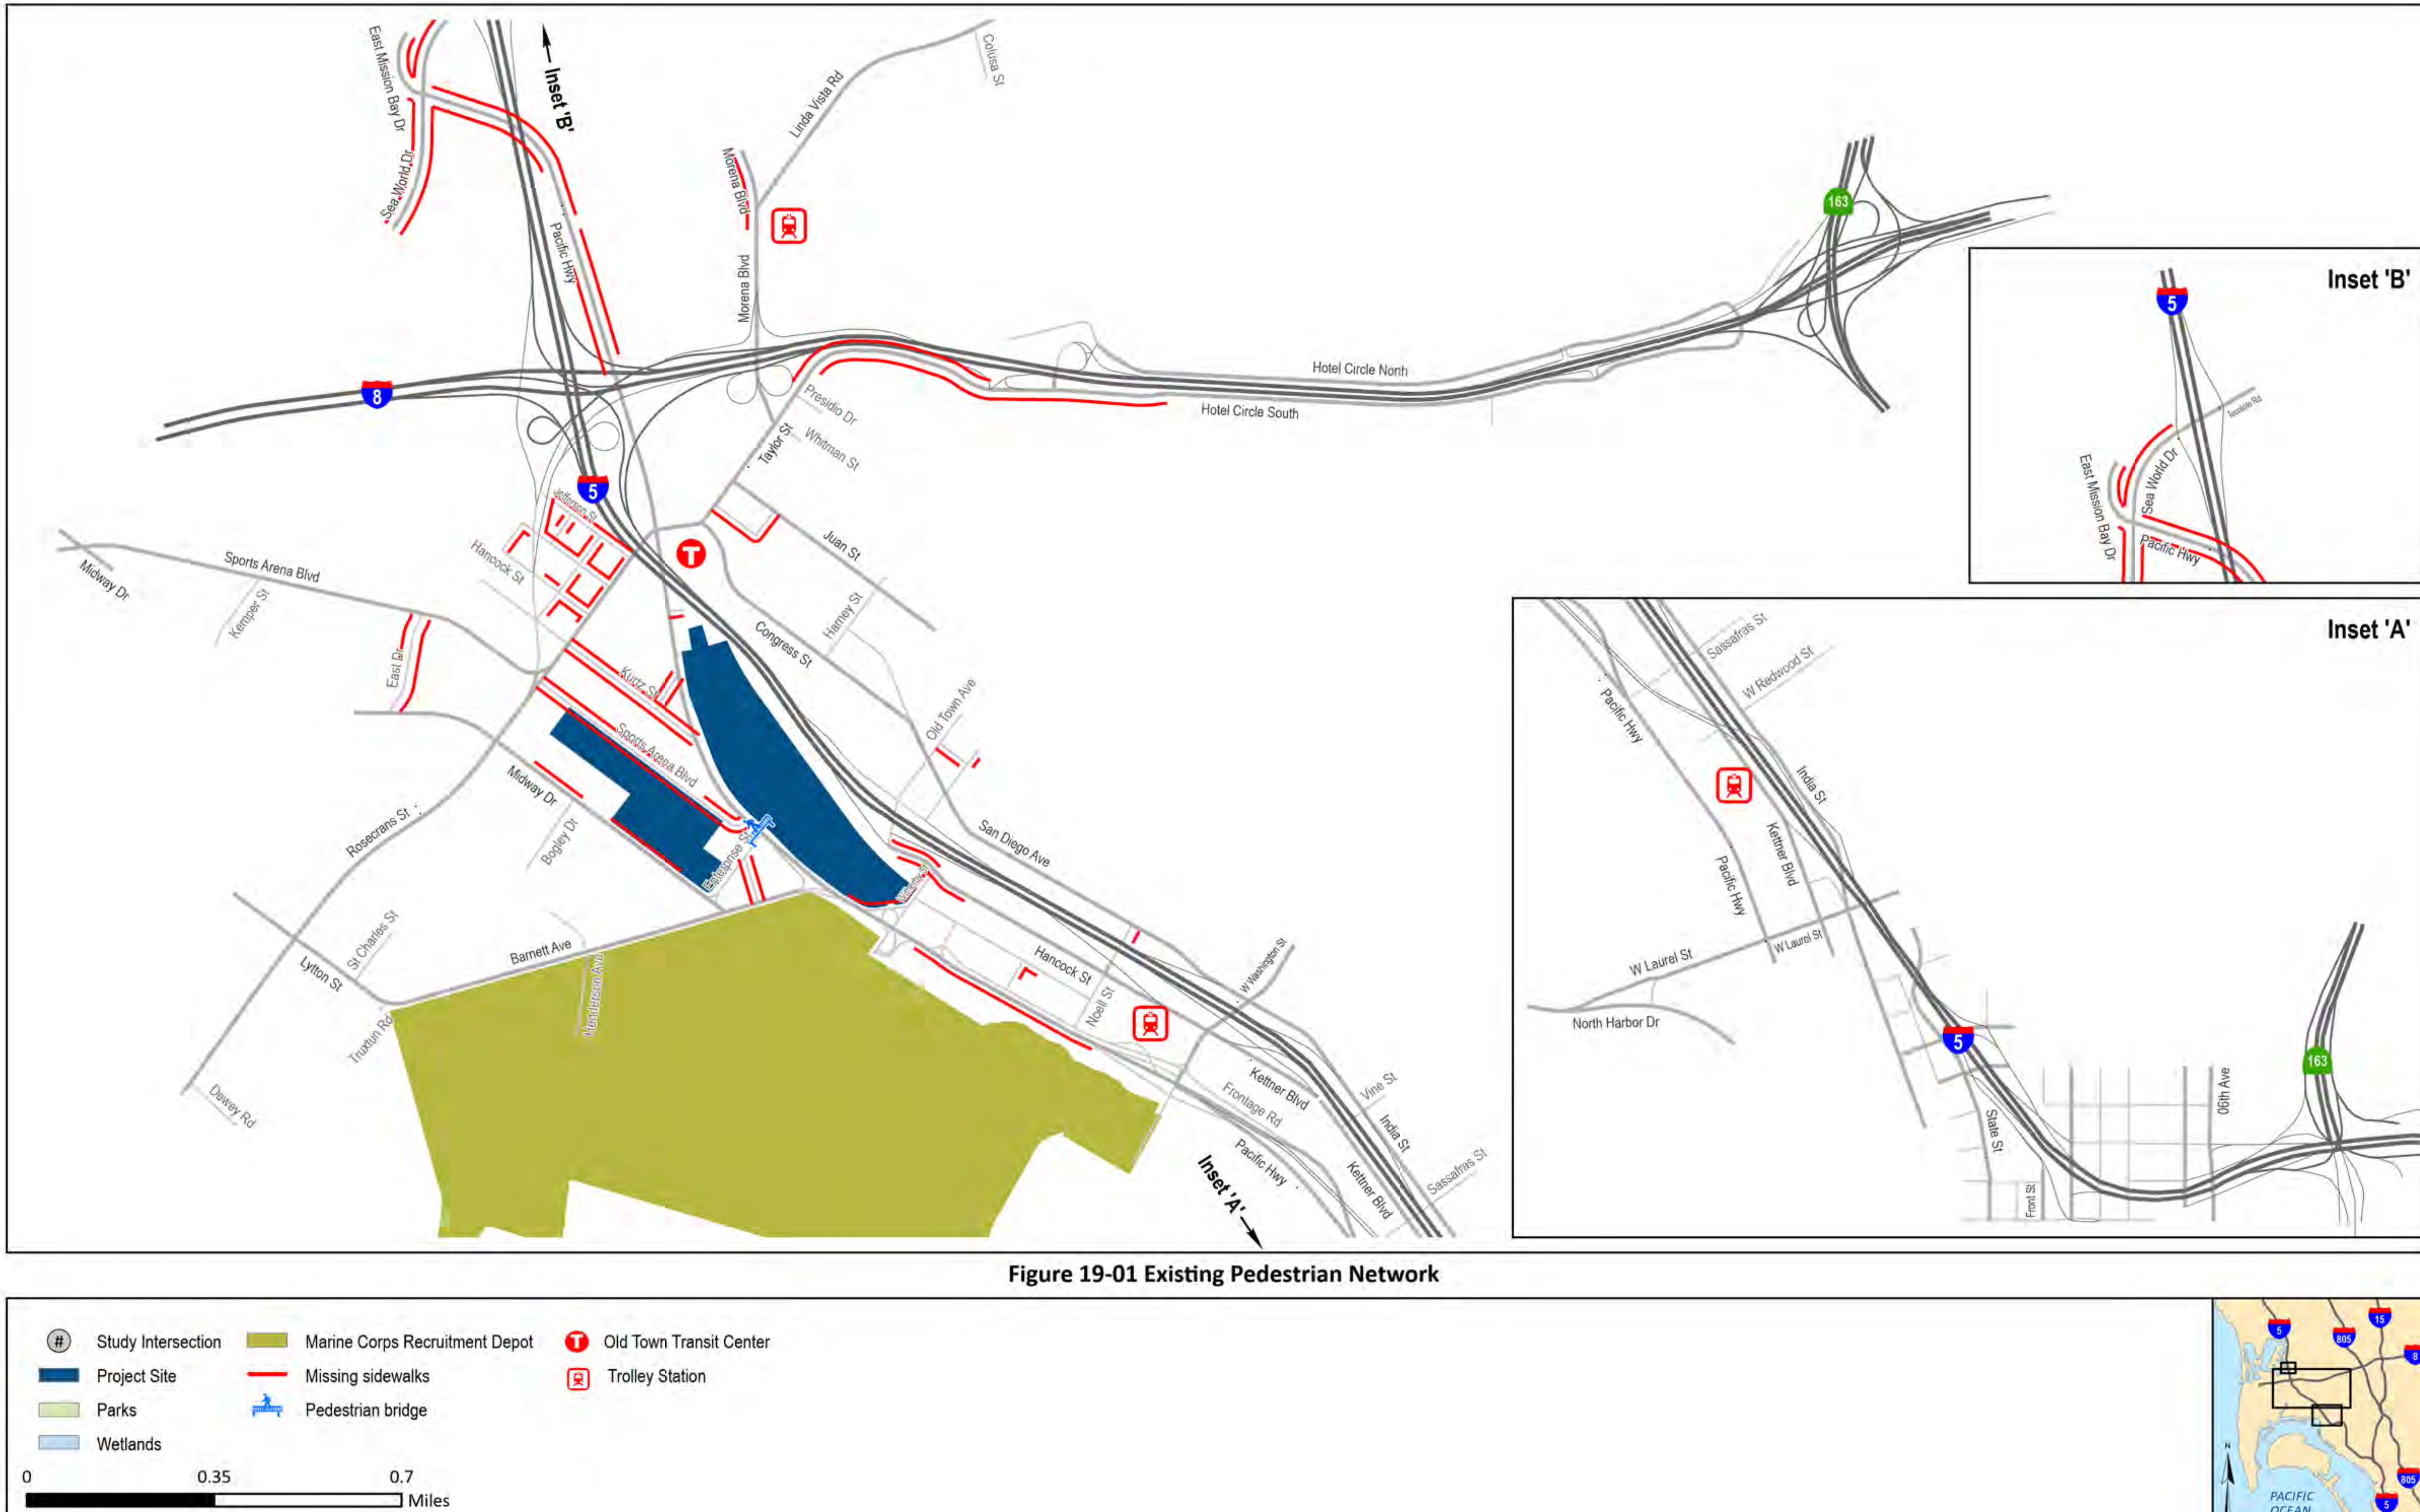

Figure 19-01 Existing Pedestrian Network

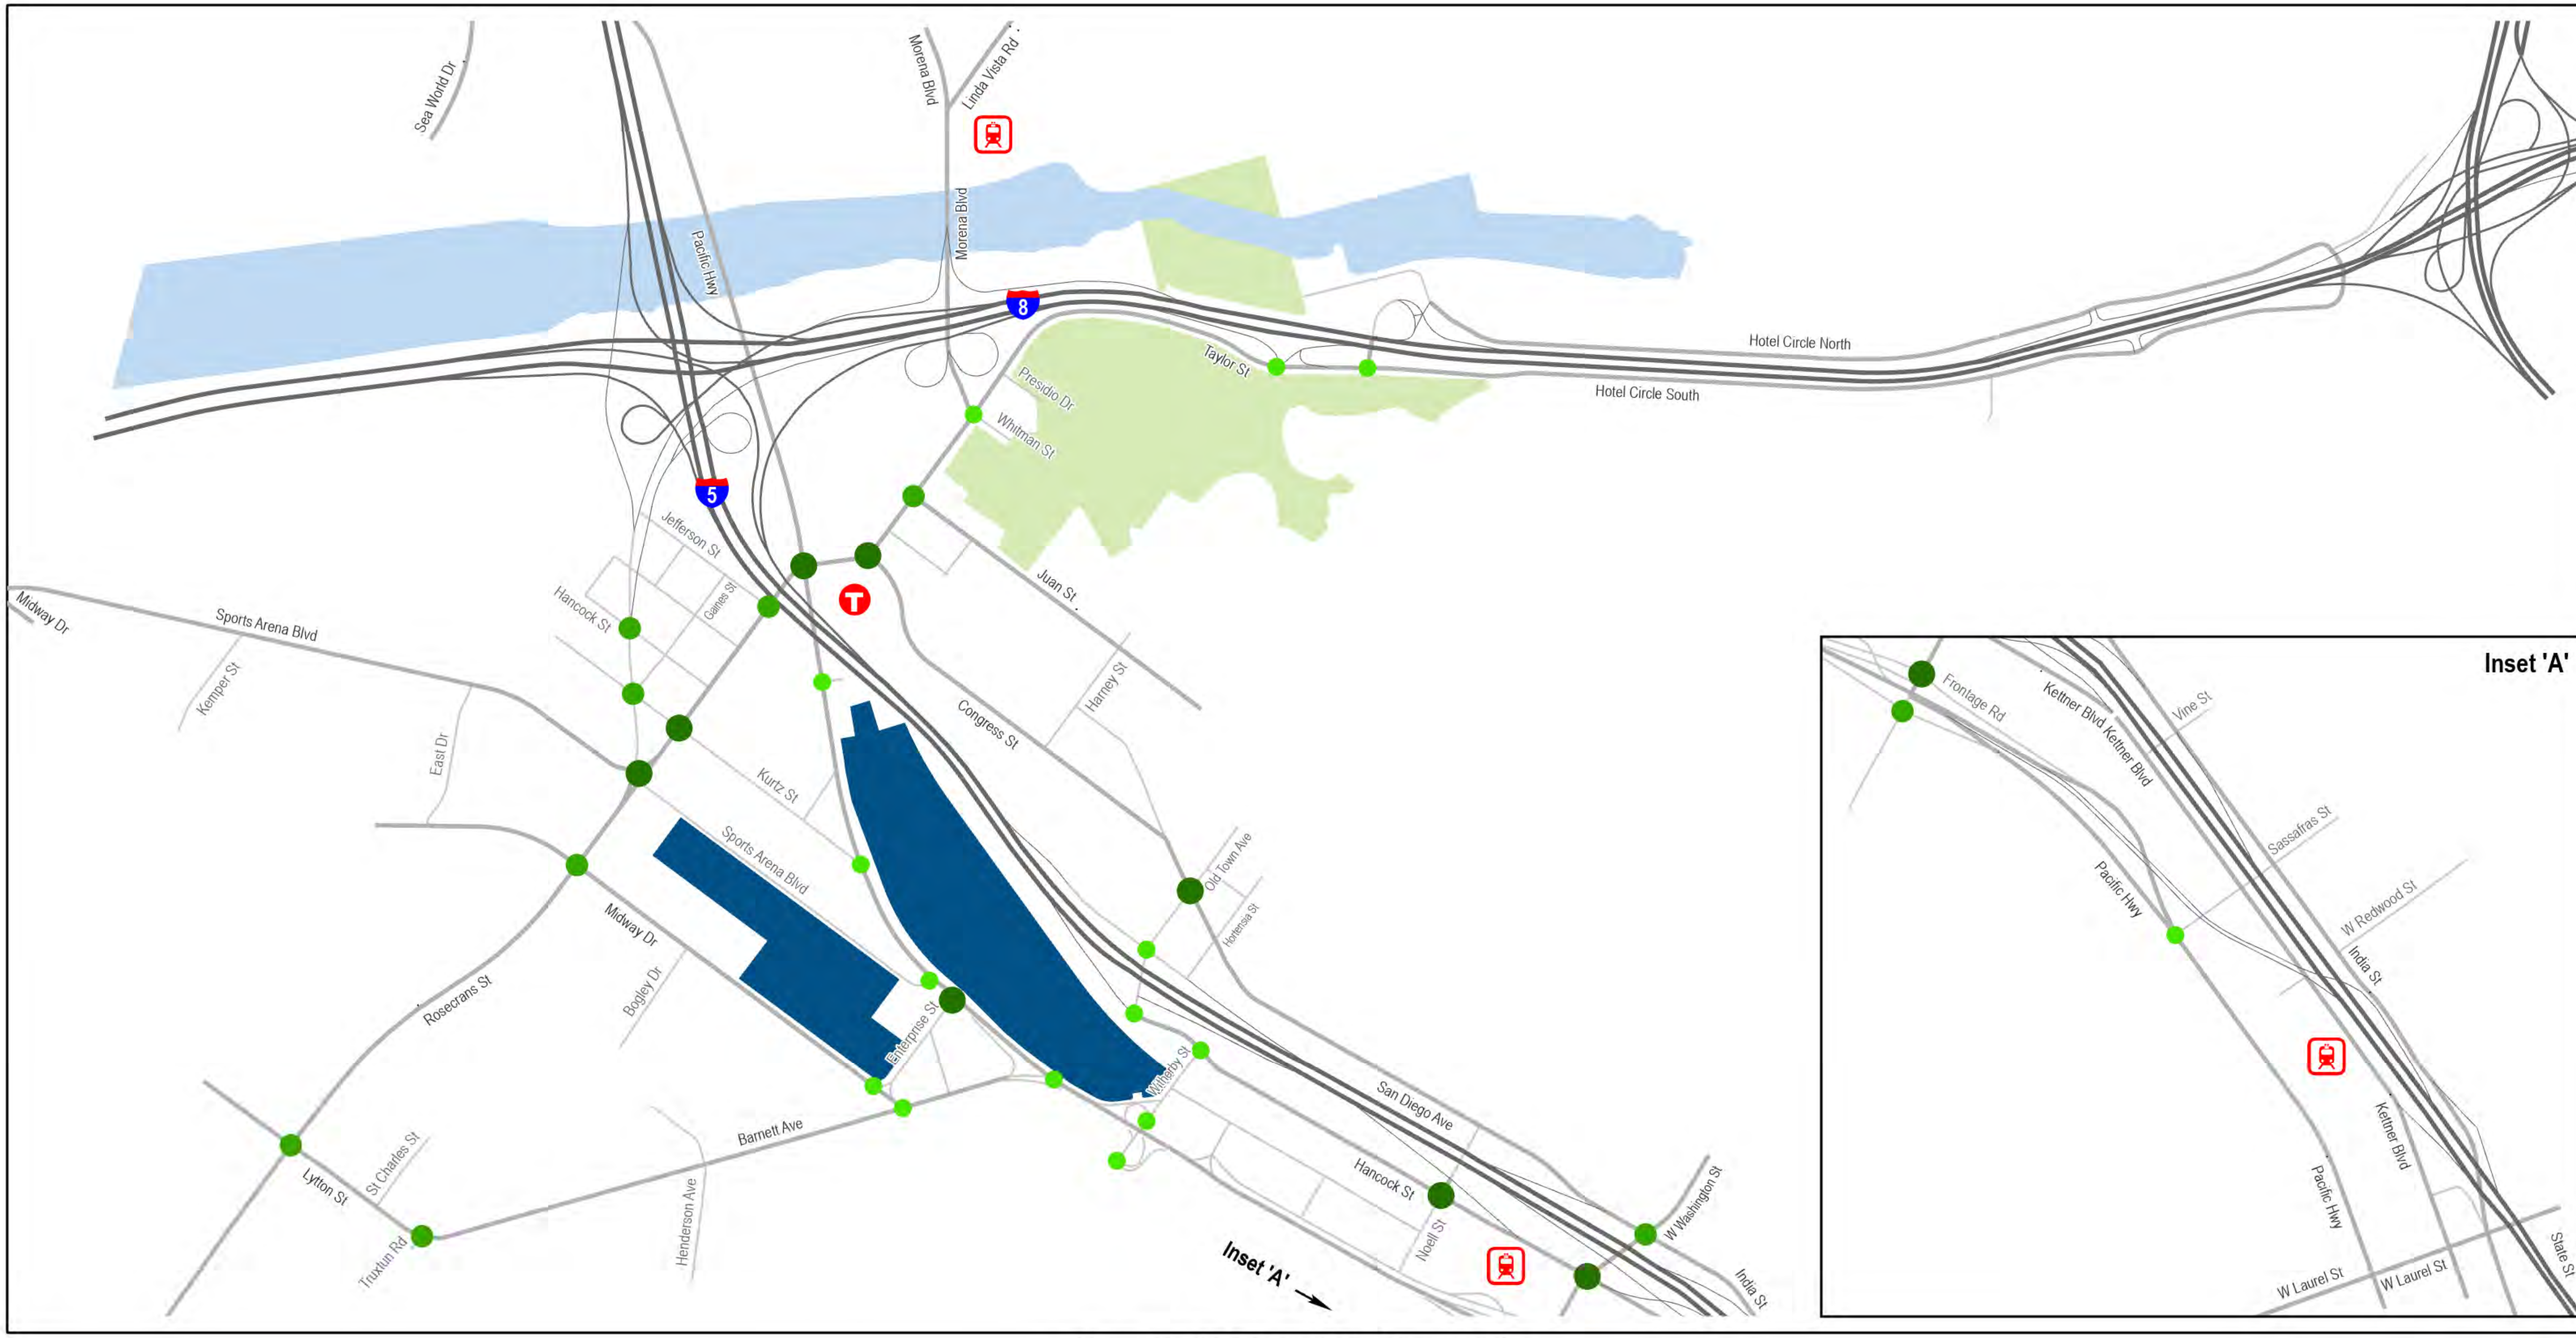

Figure 19-02 Existing Pedestrian Activity

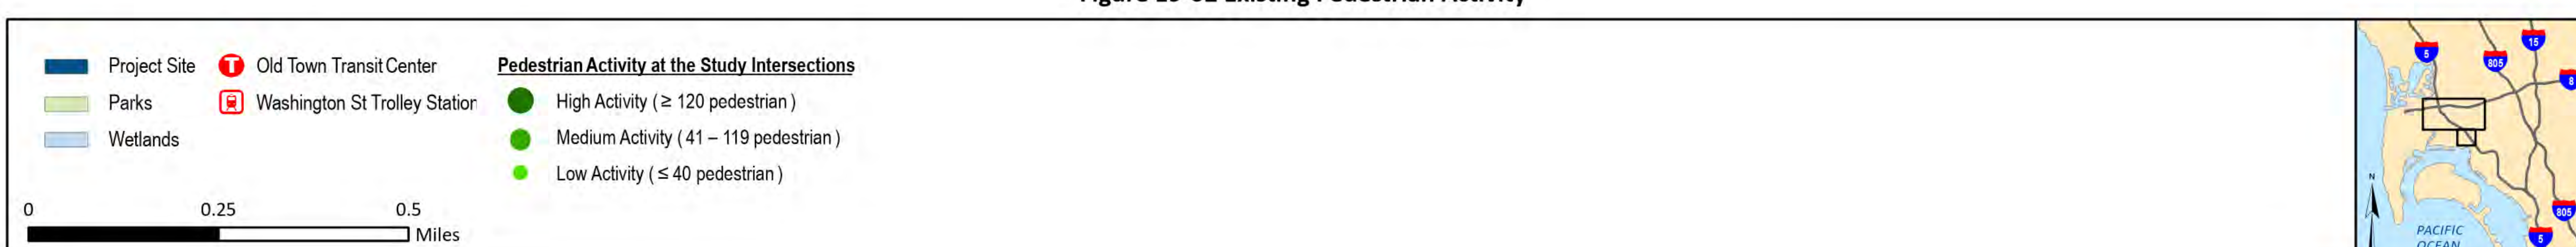

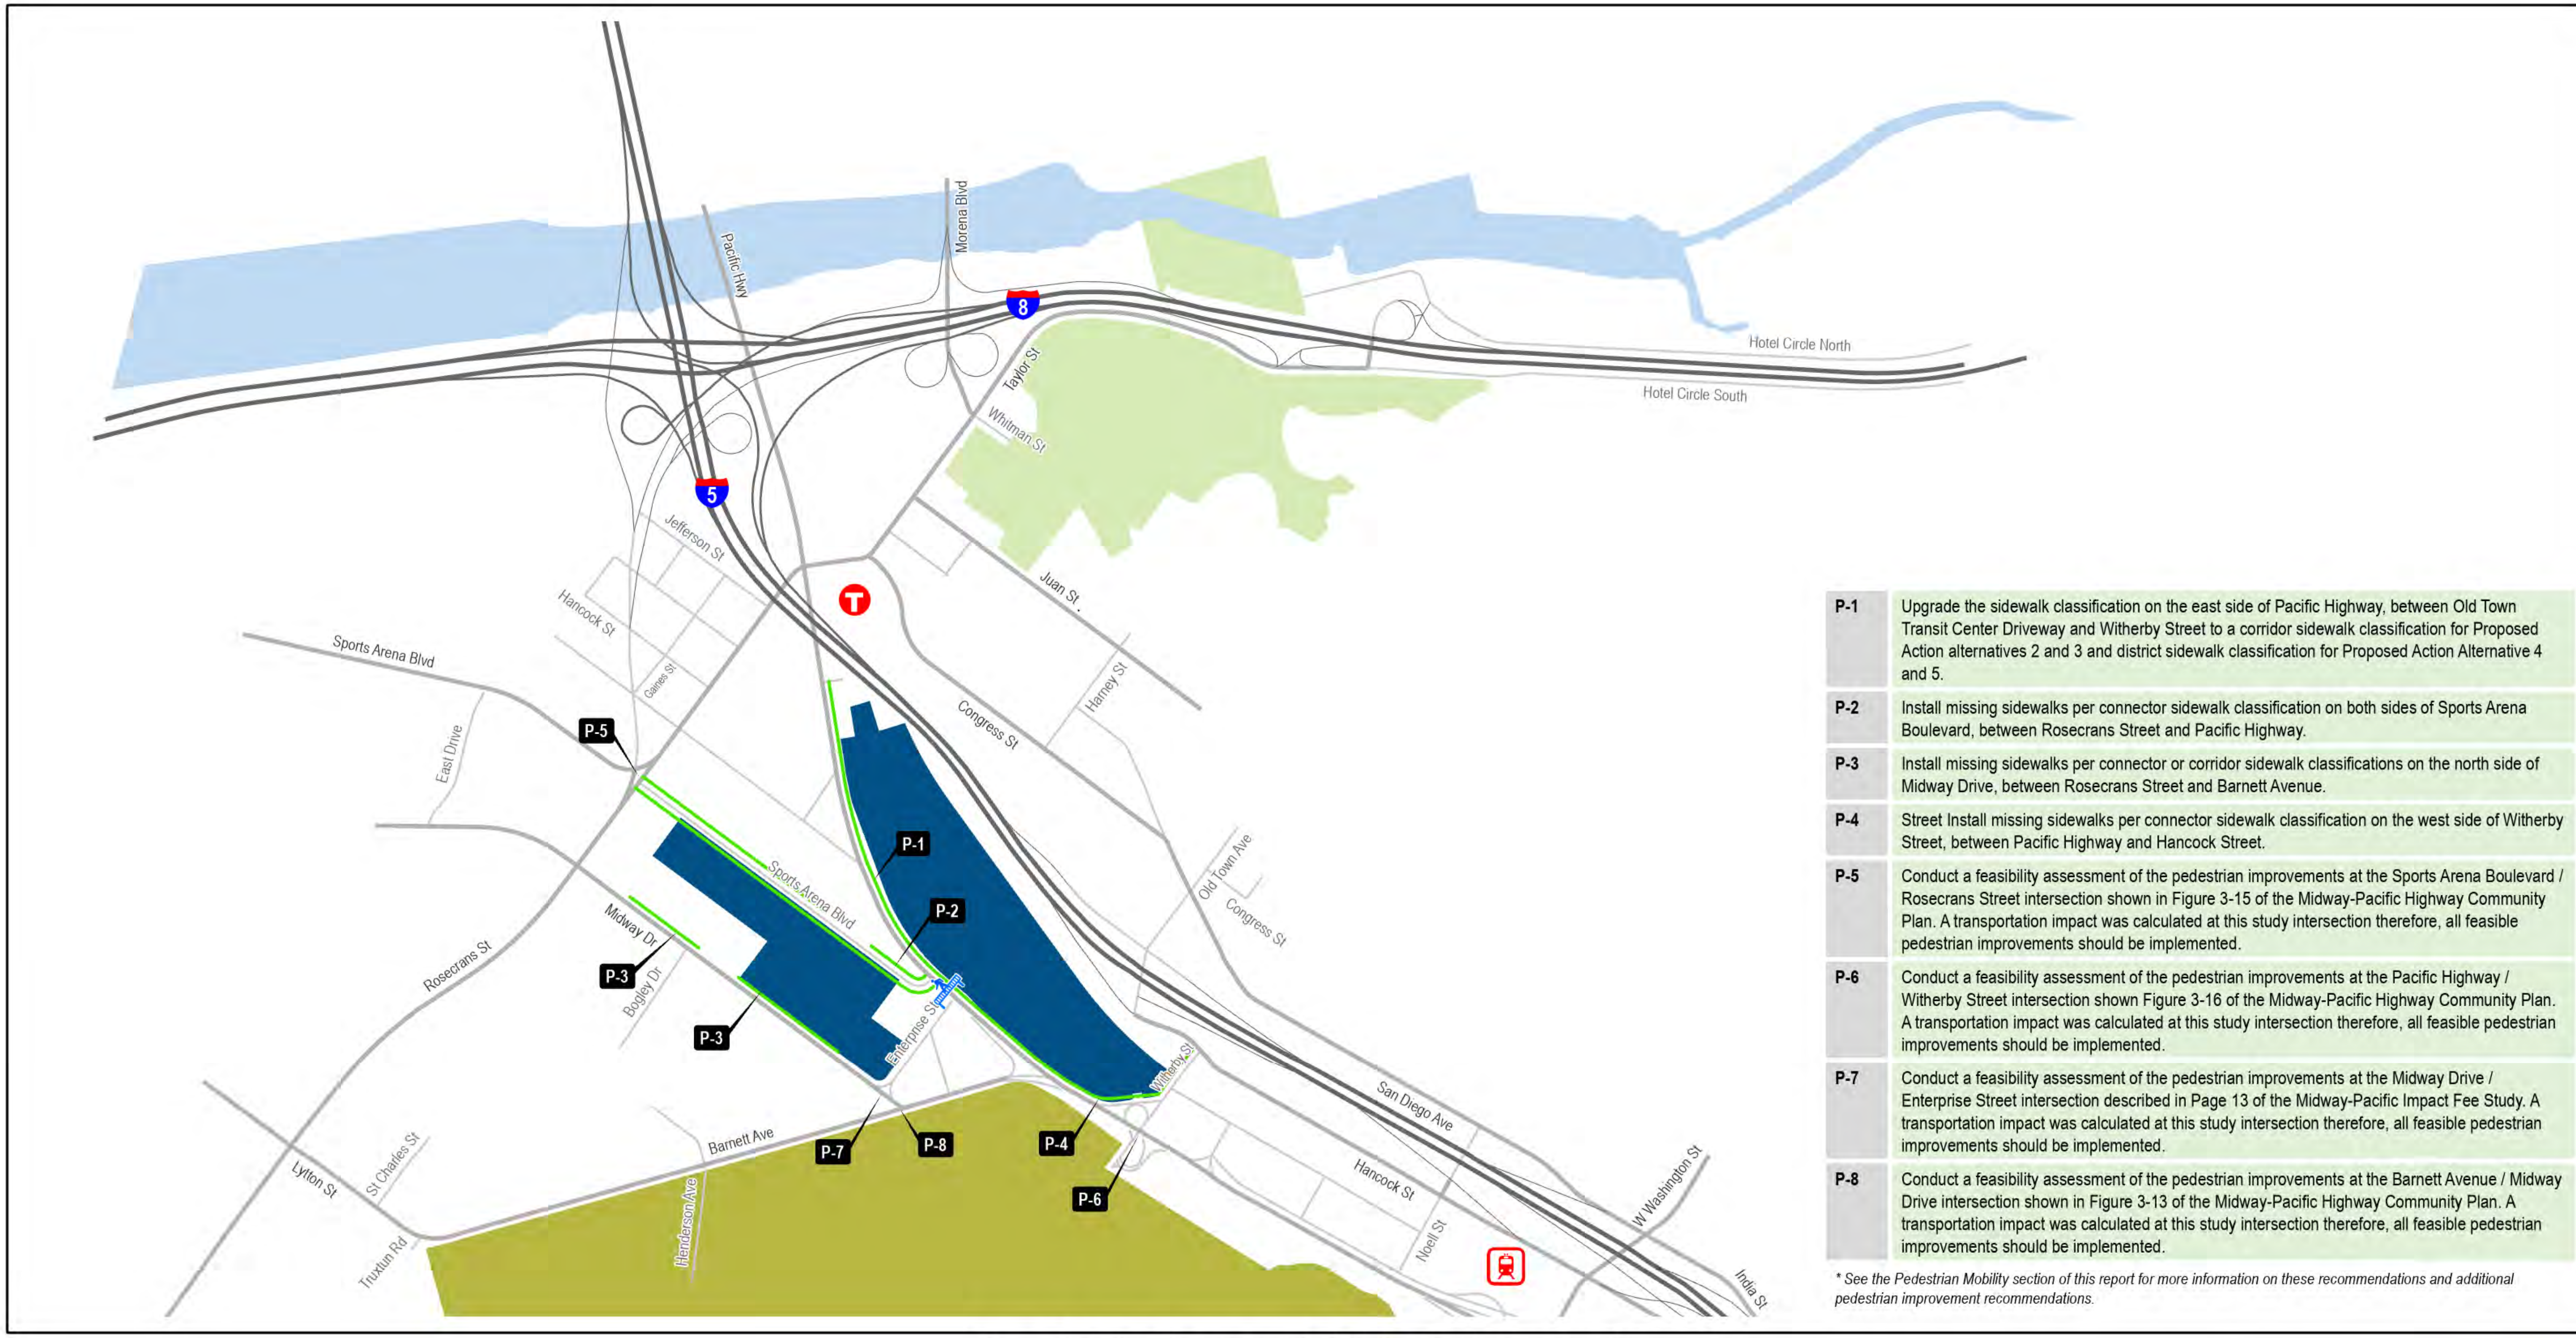

P-1	Upgrade the sidewalk classification on the east side of Pacific Highway, between Old Town Transit Center Driveway and Witherby Street to a corridor sidewalk classification for Proposed Action alternatives 2 and 3 and district sidewalk classification for Proposed Action Alternative 4 and 5.
P-2	Install missing sidewalks per connector sidewalk classification on both sides of Sports Arena Boulevard, between Rosecrans Street and Pacific Highway.
P-3	Install missing sidewalks per connector or corridor sidewalk classifications on the north side of Midway Drive, between Rosecrans Street and Barnett Avenue.
P-4	Street Install missing sidewalks per connector sidewalk classification on the west side of Witherby Street, between Pacific Highway and Hancock Street.
P-5	Conduct a feasibility assessment of the pedestrian improvements at the Sports Arena Boulevard / Rosecrans Street intersection shown in Figure 3-15 of the Midway-Pacific Highway Community Plan. A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.
P-6	Conduct a feasibility assessment of the pedestrian improvements at the Pacific Highway / Witherby Street intersection shown Figure 3-16 of the Midway-Pacific Highway Community Plan. A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.
P-7	Conduct a feasibility assessment of the pedestrian improvements at the Midway Drive / Enterprise Street intersection described in Page 13 of the Midway-Pacific Impact Fee Study. A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.
P-8	Conduct a feasibility assessment of the pedestrian improvements at the Barnett Avenue / Midway Drive intersection shown in Figure 3-13 of the Midway-Pacific Highway Community Plan. A transportation impact was calculated at this study intersection therefore, all feasible pedestrian improvements should be implemented.

** See the Pedestrian Mobility section of this report for more information on these recommendations and additional pedestrian improvement recommendations.*

20.0 BICYCLE MOBILITY

Bicycle mobility will continue to evolve as a more viable option to auto use. The development of a safe, comfortable, and well-connected bicycle network that will make bicycling an attractive mode of transportation is the vision of the Midway-Pacific Highway Community Plan.

As part of this local bicycle mobility assessment, the existing bicycle facilities and basic deficiencies within a ½ mile bicycling distance from the Proposed Action alternatives were documented and the effects of the Proposed Action alternatives on the bicycle network were evaluated.

20.1 Existing Bicycle Conditions

A detailed bicycle network inventory was conducted within a minimum of ½ mile biking distance from the Proposed Action alternatives site. The inventory included classifying the existing bicycle network into Class I, Class II, Class III or cycle track bicycle facilities as further described in ***Table 20–1***. ***Figure 20–1*** shows the existing bicycle network.

TABLE 20–1
BICYCLE CLASSIFICATIONS

Class Description	Example Graphic
Class I – Bike Path Bike paths, also termed shared-use or multi-use paths, are paved right-of-way for exclusive use by bicyclists, pedestrians, and those using non-motorized modes of travel. They are physically separated from vehicular traffic and can be constructed in roadway right-of-way or exclusive right-of-way. Bike paths provide critical connections in the city where roadways are absent or are not conducive to bicycle travel.	Class II – Bike Lane Bike lanes are defined by pavement striping and signage used to allocate a portion of a roadway for exclusive or preferential bicycle travel. Bike lanes are one-way facilities on either side of a roadway. Bike lanes enable bicyclists to ride at their preferred speed without interference from prevailing traffic conditions. Bike lanes also facilitate predictable behavior and movements between bicyclists and motorists. Whenever possible, bike lanes should be enhanced with treatments that improve safety and connectivity by addressing site-specific issues, such as additional warning or wayfinding signs. Enhanced buffered bike lanes add additional striping and lateral clearance between bicyclists and vehicles, leading to lowered levels of stress for riders.	
(continued on Next Page)	

TABLE 20–1
BICYCLE CLASSIFICATIONS

Class Description	Example Graphic
(continued from Previous Page)	
Class III - Bike Route Bike routes provide shared use with motor vehicle traffic within the same travel lane. Designated by signs, Bike Routes provide continuity to other bike facilities or designate preferred routes through corridors with high demand. Whenever possible, Bike Routes should be enhanced with treatments that improve safety and connectivity, such as the use of "sharrows" or shared lane markings to delineate that the road is a shared-use facility.	
Class IV - Cycle Track A cycle track is a hybrid type bicycle facility that combines the experience of a separated path with the on-street infrastructure of a conventional bike lane. Cycle tracks are bikeways located in roadway right-of-way but separated from vehicle lanes by physical barrier or buffers. Cycle tracks provide for one-way bicycle travel in each direction adjacent to vehicular travel lanes and are exclusively for bicycle use. Cycle tracks are not recognized by Caltrans Highway Design Manual as a bikeway facility. To provide bicyclists with the option of riding outside of the cycle track to position themselves for a left or right turn, parallel bikeways should be added adjacent to cycle track facilities whenever feasible.	
Source: Midway-Pacific Highway Community Plan

20.1.1 *Existing Bicycle Activity*

Existing bicycle counts were collected at the study area intersections during the commuter a.m. and p.m. peak hours. The combined a.m. and p.m. bicycle counts were calculated and every study intersection was categorized as low activity, average activity or high activity. This represents a measure of bicycle activity relative to the study area. ***Figure 20–2*** shows the existing bicycle activity.

The following study intersections were observed as "high" bicycle activity locations:

Intersection #3. Taylor Street / Morena Boulevard
Intersection #4. Taylor Street / Juan Street
Intersection #5. Taylor Street / Congress Street
Intersection #6. Rosecrans Street / Taylor Street / Pacific Highway
Intersection #7. Rosecrans Street / Jefferson Street
Intersection #10. Rosecrans Street / Kurtz Street
Intersection #11. Rosecrans Street / Sports Arena Boulevard

20.2 Planning Documents Review

A review of planning documents such as the *City of San Diego Bicycle Master Plan*, *San Diego Regional Bike Plan, Midway-Pacific Highway Community Plan, Midway-Pacific Highway Impact Fee Study, Old Town San Diego Community Plan, Old Town San Diego Impact Fee Study, Capital Improvements Program* and *Regional Transportation Improvement Program* was conducted.

20.3 Recommended Bicycle Network Improvements

Based on the review of the existing bicycle network and planning documents, two tiers of bicycle improvements are recommended.

<u>Tier 1: The following are bicycling improvement recommendations that shall be implemented by the Proposed Action alternatives as mitigation measures:</u>

B-1. Pacific Highway, between Old Town Transit Center Driveway and Witherby Street

- Provide Class IV bicycle facilities consistent with the *Midway-Pacific Highway Community Plan*.

B-2. Witherby Street, between Pacific Highway and Hancock Street

- Provide Class II bicycle facilities consistent with the *Midway-Pacific Highway Community Plan*.

B-3. Sports Arena Boulevard, between Rosecrans Street and Pacific Highway

- Provide Class II bicycle facilities consistent with the *Midway-Pacific Highway Community Plan*.

B-4. Midway Drive, between Rosecrans Street and Barnett Avenue

- Provide Class I bicycle facilities consistent with the *Midway-Pacific Highway Community Plan*.

B-5. Enterprise Street, between Pacific Highway and Midway Drive

- Upgrade the bicycle classification from Class III to Class II.

<u>Tier 2: The following are bicycle improvement recommendations that should be considered to enhance offsite accessibility within a ½ mile bicycling distance to the site:</u>

B-6. Taylor Street, between Kurtz Street and Presidio Drive

- Provide Class II bicycle facilities consistent with the *Midway-Pacific Highway Community Plan* and the *Old Town Community Plan.*

B-7. Juan Street, between Taylor Street and Witherby Street

- Provide Class III bicycle facilities consistent with the *Old Town Community Plan.*

B-8. Barnett Avenue, between Henderson Avenue and Midway Drive

- Provide a Class II bicycle facility (south side only) consistent with the *Midway-Pacific Highway Community Plan*.

B-9. Hancock Street, between Old Town Avenue to Noell Street

- Provide a Class II bicycle facility consistent with the *Midway-Pacific Highway Community Plan*.

B-10. Old Town Avenue, between Hancock Street and San Diego Avenue

- Provide a Class II bicycle facility consistent with the *Midway-Pacific Highway Community Plan* and *Old Town Community Plan.*

B-11. Sports Arena Boulevard, between Kemper Street and 1,050 feet east of Kemper Street

- Replace the existing the Class III bicycle facility on the south side of Sport Arena Boulevard to a Class II bicycle facility to be consistent with the Midway-Pacific Highway Community Plan.

B-12. Rosecrans Street, between Madrid Street and Midway Drive

- Replace the existing the Class III bicycle facility on the west side of Rosecrans Street to a Class II bicycle facility to be consistent with the Midway-Pacific Highway Community Plan.

Figure 20–3 shows the Tier 1 Recommended Bicycle Network Improvements.

20.4 Other Recommendations

As bicycling continues to evolve as a more viable option to auto use, it becomes critical for the Proposed Action alternative to enhance bicycle accessibility and mobility. As such, it is recommended to prepare a Bicycle Master Plan for the Proposed Action alternatives that will guide design and implementation of policies/programs to enhance access and mobility around and within the site for bicyclist of all ages and abilities.

The Bicycle Master Plan would include, but is not limited to, the following elements:

- Design standards and guidance
- Bikeability and mobility
- Feasibility and social assessments
- Wayfinding
- Policies and programs

This can be combined with the recommendation in *Section 19.4,* which would result in a Pedestrian and Bicycle Master Plan document.

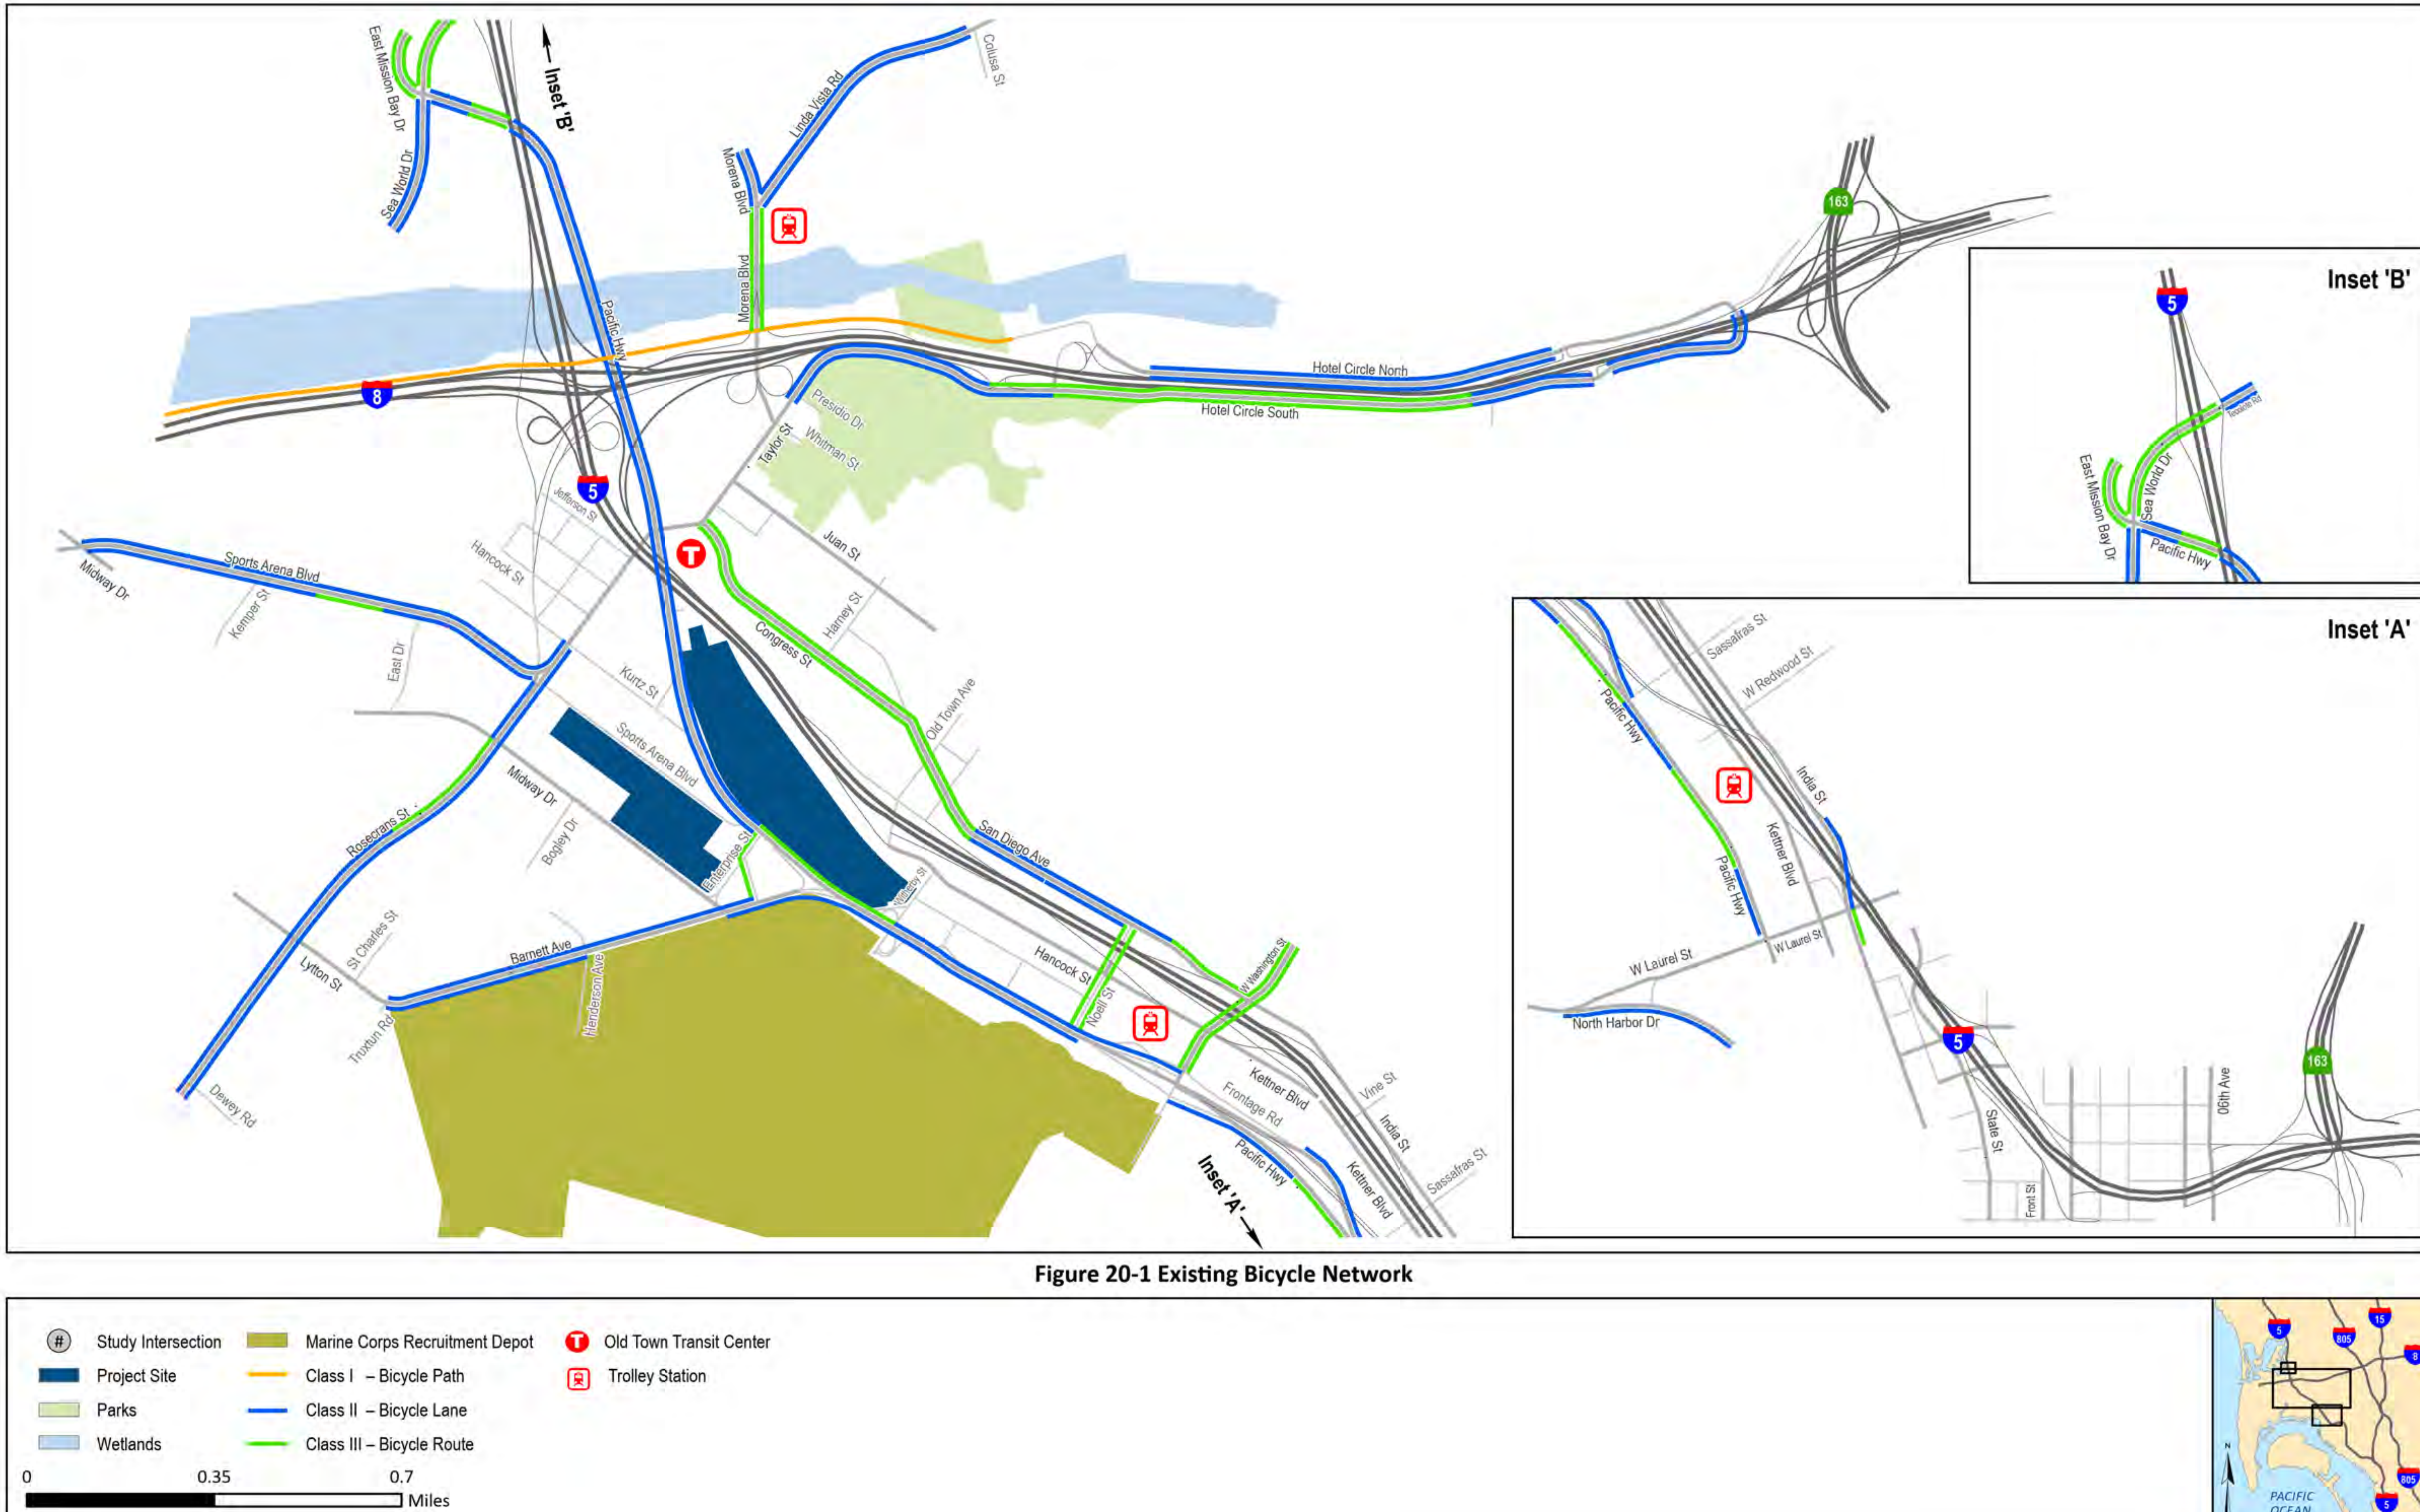

Figure 20-1 Existing Bicycle Network

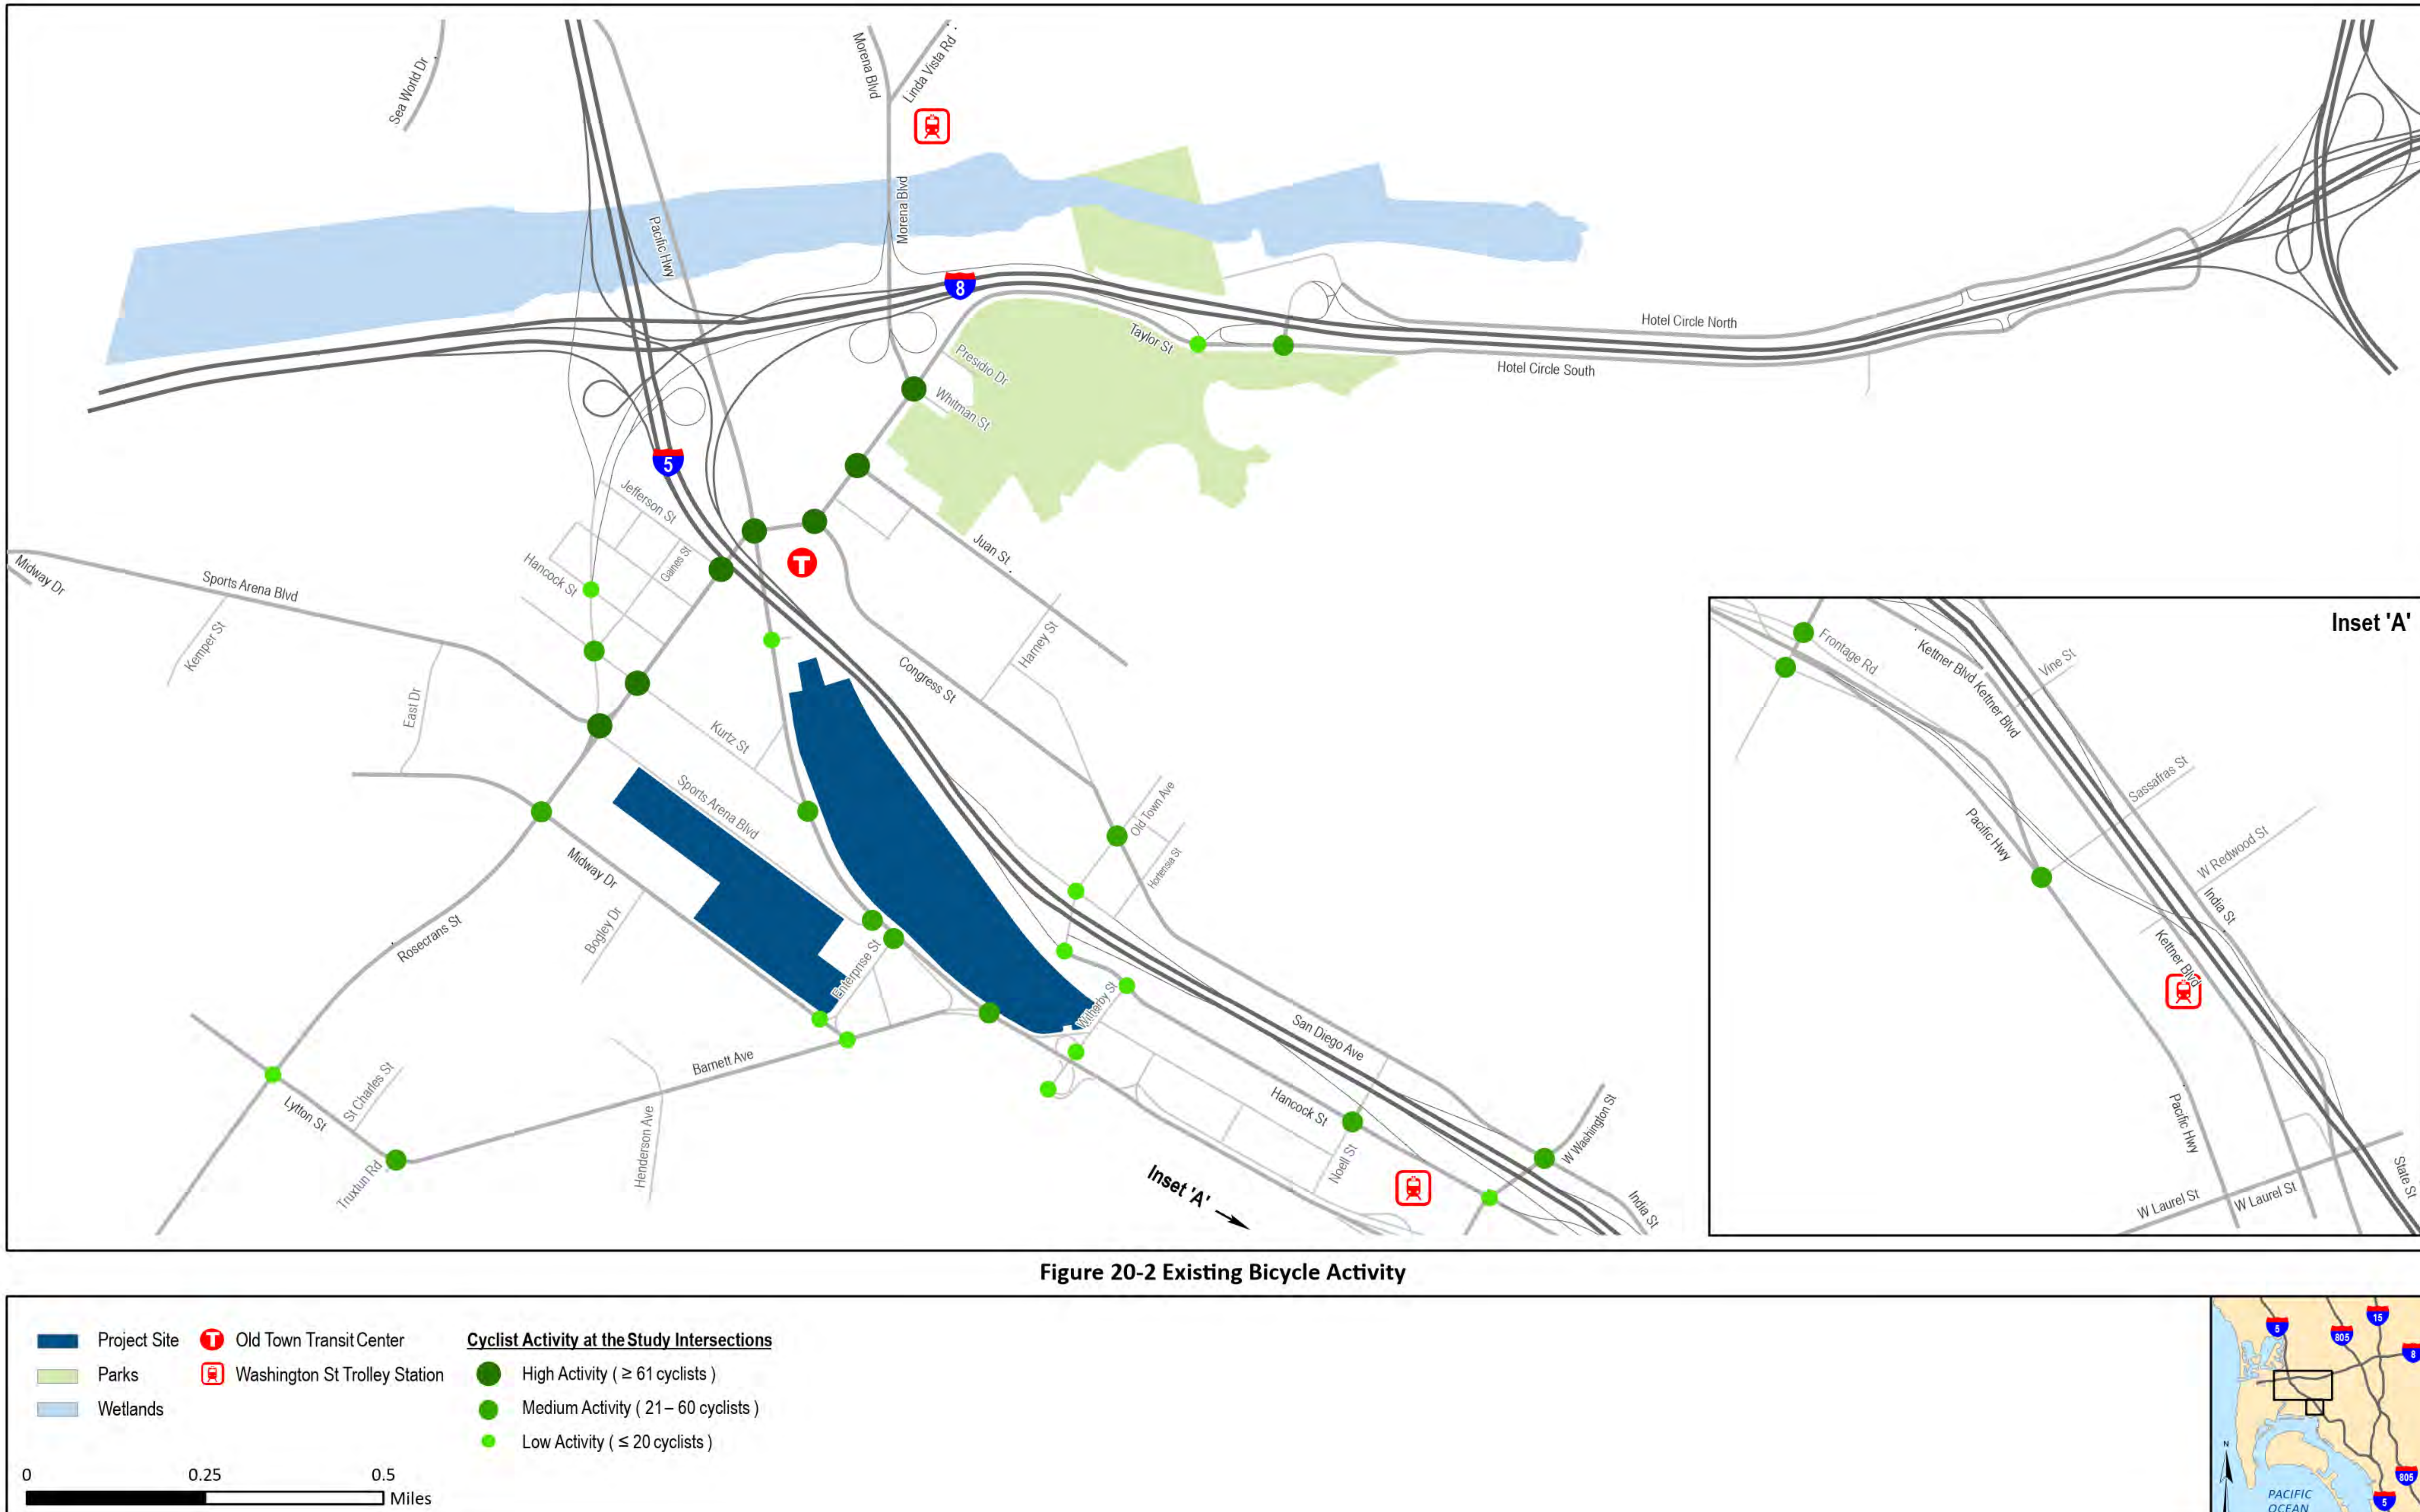

Figure 20-2 Existing Bicycle Activity

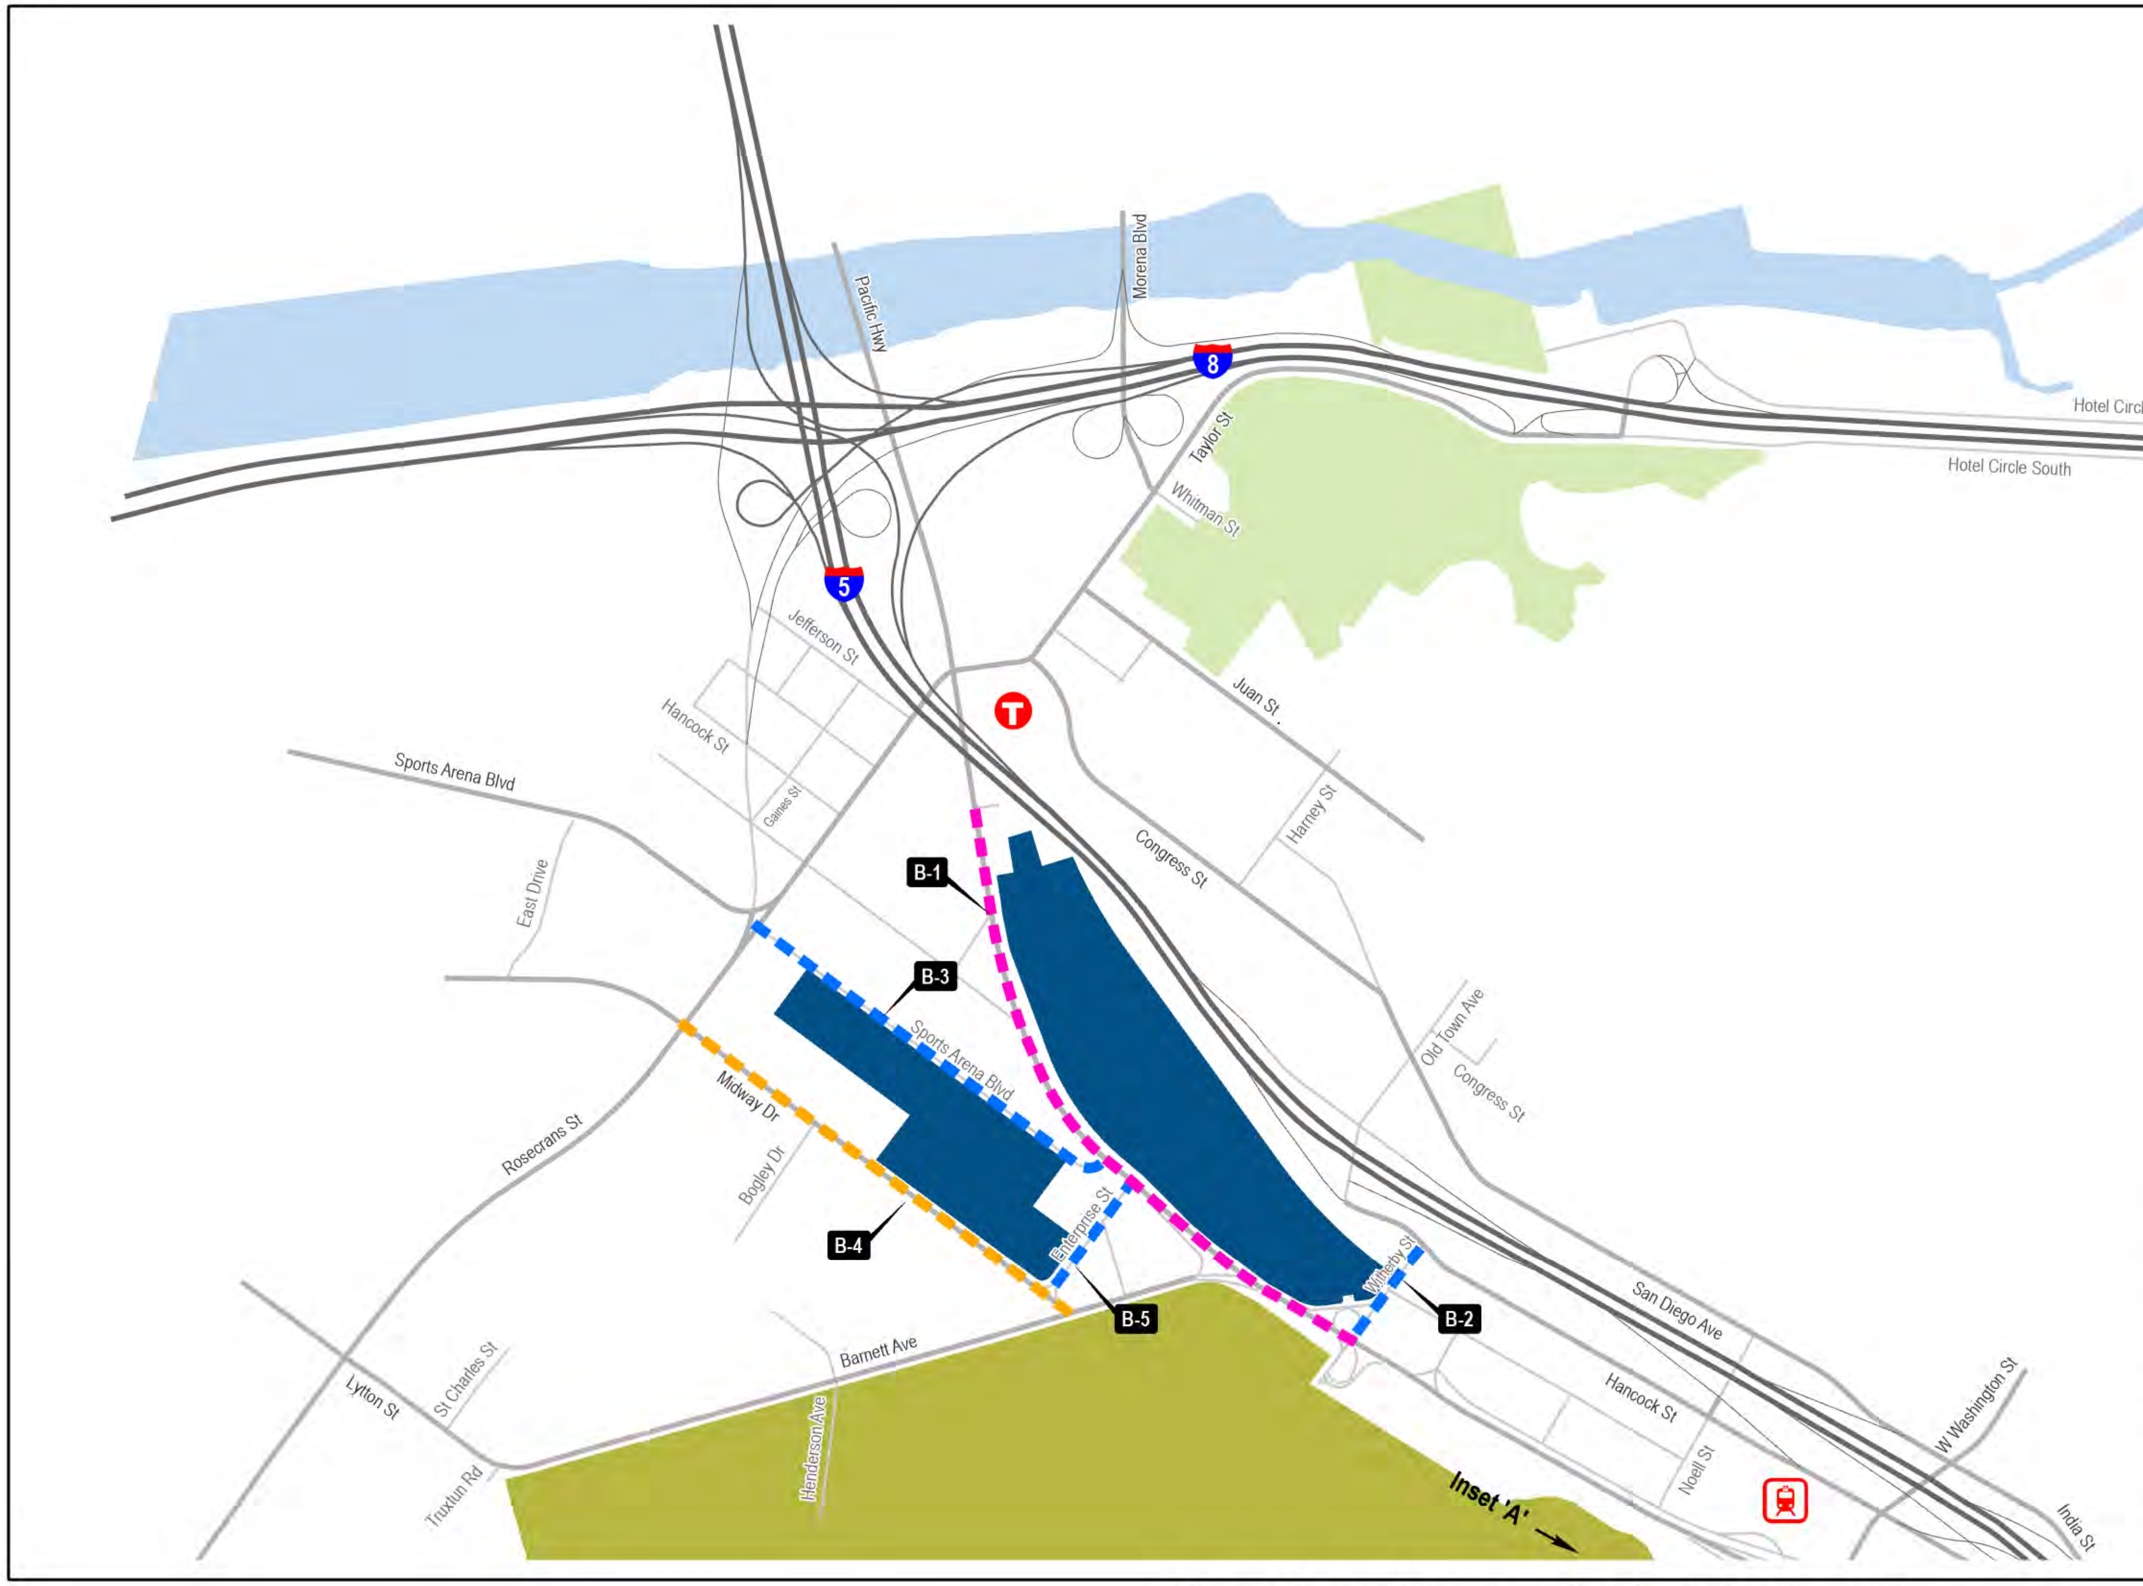

B-1	Provide Class IV bicycle facilities along Pacific Highway, between Old Town Transit Center Driveway and Witherby Street.
B-2	Provide Class II bicycle facilities along Witherby Street, between Pacific Highway and Hancock Street.
B-3	Provide Class II bicycle facilities along Sports Arena Boulevard, between Rosecrans Street and Pacific Highway.
B-4	Provide Class I bicycle facilities along Midway Drive, between Rosecrans Street and Barnett Avenue.
B-5	Upgrade the bicycle classification from Class III to Class II along Enterprise Street, between Pacific Highway and Midway Drive.

** See the Bicycle Mobility section of this report for more information on these recommendations and additional bicycle improvement recommendations.*

Figure 20-3 Tier 1 Recommended Bicycle Improvements

21.0 TRANSIT MOBILITY

SANDAG's 2050 Regional Transportation Plan (RTP) and Sustainable Communities Strategies (SCS) identifies transit's expanding role to meet local and regional mobility needs. Targets have been set in the CAP to increase transit mode share within Transit Priority Areas (TPA's). TPA's, in general, include areas within one-half mile of a rail station or the intersection of two high-quality bus routes. The SANDAG RTP developed an Urban Area Transit Strategy (UATS), focusing on the most urbanized areas of the region where transit investments are generally most efficient and effective. The Proposed Action alternatives are within both a TPA and the UATS.

As part of this local transit mobility assessment, the existing transit facilities and amenities within a ½ mile walking distance from the Proposed Action alternatives was documented and the effects of the Proposed Action alternatives on the transit network were evaluated.

21.1 Existing Transit Conditions

The area is well served by public transit, both local and regional. The Old Town Transit Center is a focal point for transit access in Old Town San Diego and adjacent communities. It is where the interchange of various transit routes and travel modes occur. The center (or hub) includes transit services provided by the San Diego Metropolitan Transit System (MTS), the North County Transit District (NCTD) and Amtrak networks. Below is a brief description of the transit services:

- *MTS Bus* – The MTS bus provides local and regional connections between neighborhoods and cities. 11 MTS bus routes are serving the area. Route summaries are provided in *Section 21.1.1*.
- *MTS Trolley* – The MTS Trolley is a light rail system that connects the eastern and southern areas of San Diego County with the Downton region. The Sycuan Green Line travels east and west, and is the only trolley route serving the area. The Sycuan Green Line operates between the City of Santee and Downtown San Diego.
- *NCTD Coaster* – The NCTD Coaster is a commuter train that travels north and south, connecting Oceanside to San Diego.
- *Amtrak* – Amtrak is a national rail service with route connections between 46 states, the District of Columbia and three Canadian provinces.

The existing transit network are illustrated in ***Figure 21–1***.

21.1.1 *Bus Route Summaries*

This section describes the various bus routes in the area.

- **Route 8** runs from the Old Town Transit Center to Beyard Street and Garnet Avenue via Mission Boulevard, West Mission Bay, and Sports Arena Boulevard. Key destinations include Belmont Park, Crystal Pier, Mission, Bay, and Pachanga Arena (Sports Arena Boulevard). Route 8 currently operates Monday through Friday from 5:45 a.m. through 12:15 a.m. departing from the Old Town Transit Center and from 5:27 a.m. through 11:39 a.m. departing from Bayard Street and Garnet Avenue. The Saturday schedule begins at 5:45 a.m. through 12:15 a.m. departing from the Old Town Transit Center and begins at 6:09 a.m. to 11:39 p.m. departing from Bayard Street and Garnet Avenue. The Sunday schedule begins at 6:00 a.m. through 9:45 p.m. departing from the Old Town Transit Center and begins at 6:09 a.m. through 9:11 p.m. departing from Bayard Street and Garnet Avenue. Route 8 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 20 to 30-minute headways.

- **Route 9** runs from the Old Town Transit Center to Beyard Street and Garnet Avenue via Garnet Avenue, Ingraham Street, and Sports Arena Boulevard. Key destinations include Crystal Pier, Mission, Bay, Pechanga Arena (Sports Arena), and Seaworld. Route 9 currently operates Monday through Friday from 6:00 a.m. through 8:33 p.m. departing from the Old Town Transit Center and from 5:46 a.m. through 9:09 p.m. departing from Bayard Street and Garnet Avenue. The Saturday schedule begins at 6:33 a.m. through 8:33 a.m. departing from the Old Town Transit Center and begins at 6:22 a.m. to 9:08 p.m. departing from Bayard Street and Garnet Avenue. The Sunday schedule begins at 7:43 a.m. through 7:43 p.m. departing from the Old Town Transit Center and begins at 8:18 a.m. through 8:48 p.m. departing from Seaworld. Route 8 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 30-minute headways.

- **Route 10** runs from the Old Town Transit Center to University Avenue and College Avenue via University Avenue, Washington Street, and Pacific Highway. Key destinations include City Heights Retail Village, City Heights Transit Plaza, Hillcrest DMV, The HUB Hillcrest Market, Scripps Mercy Hospital, and Village Hillcrest. Route 10 currently operates Monday through Friday from 5:51 a.m. through 11:45 p.m. departing from the Old Town Transit Center and from 4:45 a.m. through 10:29 p.m. departing from University Avenue and College Avenue. The Saturday schedule begins at 5:51 a.m. through 11:42 p.m. departing from the Old Town Transit Center and begins at 5:11 a.m. through 10:28 p.m. departing from the City Heights Transit Plaza. The Sunday schedule begins at 6:32 a.m. through 9:56 p.m. departing from the Old Town Transit Center and begins at 5:23 a.m. through 7:45 p.m. departing from the City Heights Transit Plaza. Route 10 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 15 to 30-minute headways.

- **Route 28** runs from the Old Town Transit Center to Anchorage and Shelter Island Drive via Rosecrans Street. Key destinations include High Tech High Village, Liberty Station, and Loma Square. Route 28 currently operates Monday through Friday from 5:45 a.m. through 10:30 p.m. departing from the Old Town Transit Center and from 6:15 a.m. through 10:30 p.m. departing from Anchorage and Shelter Island Drive. The Saturday schedule begins at 6:15 a.m. through 10:30 p.m. departing from the Old Town Transit Center and begins at 6:16 a.m. to 10:15 p.m. departing from Anchorage and Shelter

Island Drive. The Sunday schedule begins at 6:30 a.m. through 7:30 p.m. departing from the Old Town Transit Center and begins at 6:59 a.m. through 6:58 p.m. departing from Anchorage and Shelter Island Drive. Route 28 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 30-minute to 1-hour headways.

- **Route 30** runs from Downtown to UTC / VA Medical Center via Old Town, Pacific Beach, La Jolla, and UC San Diego. Key destinations include Birch Aquarium, Mission Bay High School, UC San Diego, VA Medical Center, and Westfield UTC. Route 30 currently operates Monday through Friday from 5:11 a.m. through 6:59 p.m. departing from 9th Avenue and C Street and from 5:45 a.m. through 11:34 p.m. departing from Old Town Transit Center. The Saturday schedule begins at 5:26 a.m. through 6:56 a.m. departing from 9th Avenue and C Street and begins at 5:45 a.m. to 12:15 a.m. departing from Old Town Center. The Sunday schedule begins at 5:46 a.m. through 7:44 a.m. departing from City College Transit Center and begins at 6:00 a.m. through 11:00 p.m. departing from Old Town Transit Center. Route 30 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 15-minute headways.

- **Route 35** runs from the Old Town Transit Center to Cable Street and Newport Avenue via Rosecrans Street, Midway Drive, West Point Loma Boulevard and Cable Street. Key destinations include Loma Square, Point Loma Plaza, Robb Field, and Sports Arena Plaza. Route 35 currently operates Monday through Friday from 5:45 a.m. through 11:00 p.m. departing from the Old Town Transit Center and from 5:10 a.m. through 10:09 p.m. departing from Cable Street and Newport Avenue. The Saturday schedule begins at 6:12 a.m. through 11:00 p.m. departing from the Old Town Transit Center and begins at 6:40 a.m. to 10:09 p.m. departing Cable Street and Newport Avenue. The Sunday schedule begins at 6:27 a.m. through 9:30 p.m. departing from the Old Town Transit Center and begins at 6:55 a.m. through 8:38 p.m. departing from Cable Street and Newport Avenue. Route 35 operates on select observed holidays with a Saturday or Sunday schedule. All schedules generally operate with 15 to 30-minute headways.

- **Route 44** runs from the Old Town Transit Center to Clairemont Drive and Clairemont Mesa Boulevard via Taylor Street, Linda Vista Road, Mesa College Drive, Armstrong Place, Armstrong Street, Stalmer Street, Convoy Street, and Clairemont Mesa Boulevard. Key destinations include Clairemont Square, Convoy Village, Kearny High School, Madison High School, Mesa College, and University of San Diego. Route 44 currently operates Monday through Friday from 5:43 a.m. through 11:28 p.m. departing from the Old Town Transit Center and from 4:24 a.m. through 10:21 p.m. departing from Clairemont Drive and Clairemont Mesa Boulevard. The Saturday schedule begins at 6:43 a.m. through 11:13 a.m. departing from the Old Town Transit Center and begins at 5:52

a.m. through 10:21 p.m. departing from Clairemont Drive. The Sunday schedule begins at 6:30 a.m. through 9:30 p.m. departing from the Old Town Transit Center and begins at 6:37 a.m. through 8:33 p.m. departing from Clairemont Drive and Clairemont Mesa Boulevard. Route 44 operates on select observed holidays with a Saturday or Sunday schedule. The weekday schedule generally operates with 10 to 15-minute headways, and the weekend schedule generally operates with 30-minute to 1-hour headways.

- **Route 83** runs from the Old Town Transit Center to the American Plaza Trolley Station via Taylor Street, Juan Street, Sunset Boulevard, Lewis Street, Hawk Street, Goldfinch Street, Reynard Way, State Street, and Kettner Boulevard. Key destinations include American Plaza, Lewis Street, Little Italy, Old Town Station Historic Park, and Reynard Way. Route 83 currently operates Monday through Friday from 7:08 a.m. through 5:48 p.m. departing from the Old Town Transit Center and from 6:34 a.m. through 6:29 p.m. departing from the American Plaza Trolley Station. Route 83 does not operate on select observed holidays or weekends. All schedules generally operate with 1-hour and 10-minute headways.

- **Route 88** runs from the Old Town Transit Center to the Fashion Valley Transit Center via Taylor Street, Hotel Circle South, Hotel Circle North, and Fashion Valley Road. Key destinations include Fashion Valley Mall, Old Town State Historical Park, and Presidio Park. Route 88 currently operates Monday through Friday from 6:11 a.m. through 9:11 p.m. departing from the Old Town Transit Center and from 5:55 a.m. through 8:55 p.m. departing from the Fashion Valley Transit Center. Saturday route schedule begins at 5:57 a.m. through 8:27 p.m. departing from the Old Town Transit Center and begins at 5:40 a.m. through 8:10 p.m. departing from the Fashion Valley Transit Center. Route 88 does not operate on select observed holidays or Sundays. All schedules generally operate with 30-minute headways.

- **Route 105** runs from Old Town to UTC via Morena Boulevard and Clairemont Drive. Key destinations include Bay Park, Clairemont High School, Clairemont Square, and Univercity City High School. Route 105 currently operates Monday through Friday from 5:14 a.m. through 10:27 p.m. departing from the Old Town Transit Center and from 5:27 a.m. through 6:54 p.m. departing from the UTC Transit Center. The Saturday schedule begins begins at 6:18 a.m. through 8:27 p.m. departing from the Old Town Transit Center and begins at 6:47 Am through 7:51 p.m. departing from Clairemont Square. The Sunday schedule begins at 7:28 a.m. through 8:33 p.m. departing from the Old Town Transit Center and begins at 6:53 a.m. through 8:02 p.m. departing from Clairemont Square. All schedules operate with 30-minute headways. All schedules generally operate with 30-minute to 1-hour headways.

- **Route 150** runs from Downtown to UTC / VA Hospital Express via Old Town and UC San Diego D. Key destinations include Costa Verde Shopping Center, UC San Diego, VA Medical Center, and Westfield UTC. Route 150 currently operates Monday through Friday from 5:00 a.m. through 9:00 p.m. departing from 1st Avenue and Broadway and from 6:04 a.m. through 9:02 a.m. departing from the UTC Transit Center. The Saturday schedule begins at 6:45 a.m. through 5:45 p.m. departing from Old Town Transit Center and begins at 8:02 a.m. through 9:04 p.m. departing from the UTC Transit Center. Route 150 doesn't operate on Sundays and select observed holidays. All schedules generally operate with 30-minute headways.

21.2 Transit Mobility Review

In this section, stations within ½ walking distance from the Proposed Action alternatives were evaluated. In general, the transit connectivity is good. There are missing sidewalks identified in *Section 14.0* that may make it difficult for some users to access certain bus stops. Furthermore, each of the bus stops were reviewed based on the amenities provided for bus service users. ***Table 21–1*** provides a summary of the amenities provided at each of the bus stations. It should also be noted that the Old Town Transit Center provides additional amenities beyond what is indicated in the *Table 21–1*. The Old Town Transit Center provides parking (shared between transit riders and San Diego State Historic Park visitors), porta potties, hand-wash stations, bicycle lockers, pay phones, and a small convenience store.

TABLE 21–1
AMENITIES AT TRANSIT STOPS

Location	Stop ID	Shelters	Benches	Trash Receptacles	Station Signs	Maps / Wayfinding	Lighting[1]

Footnotes:
1. Lighting may include lighting fixture within the shelter or a street light within 30 feet.
2. Stop IDs 94025, 94019, 94023, 94020, 94024 ,94022 ,96034, 94021, 94027, 94028, 94030, and 94034.

21.3 Planning Documents Review

A review of planning documents such as the *Midway-Pacific Highway Community Plan*, *Midway-Pacific Highway Impact Fee Study*, *Old Town San Diego Community Plan*, *Old Town San Diego Impact Fee Study*, *Capital Improvements Program* and *Regional Transportation Improvement Program* was conducted. Two key projects are planned: the Mid-Coast Trolley and Rapid Bus Service.

The planned Mid-Coast Trolley project proposes a new trolley line connecting Downtown San Diego to the University City Community. When completed there will be a total of 11 miles of new rail along Interstate 5 and nine new stations. This project, along with upgrades to existing transit stations will be transformative to regional mobility.

The planned Rapid Bus proposes service along Sports Arena Boulevard, Pacific Highway and Rosecrans Street, connecting to the Old Town Transit Center which will complement the existing trolley services.

In addition, corridor transit improvements such as queue jump lanes, transit signal priority and other measures identified within the City's *Traffic Signal Communications Master Plan* are planned along the following corridor:

- Sport Arena Boulevard, between Midway Drive and Rosecrans Street
- Midway Drive between Sports Arena Blvd and Rosecrans Street
- Rosecrans Street, between Lytton Street and Pacific Highway
- Pacific Highway, between Taylor Street and Laurel Street
- Taylor Street, between Pacific Highway to the Old Town Community Boundary

21.4 Old Town Transit Center Ridership

Boarding and alighting information was obtained from SANDAG. ***Table 21–2*** reports the ridership projections for the Old Town Transit Center for Year 2030 and Year 2050. It should be noted that Year 2050 is slightly less than Year 2030 in large part due to competing transit lines.

TABLE 21–2
OLD TOWN TRANSIT CENTER FUTURE DAILY RIDERSHIP

Mode	**Year 2030**		**Year 2050**	
	Boarding	**Alighting**	**Boarding**	**Alighting**
Bus	10,847	10,997	10,258	10,306
Trolley	10,817	10,865	10,129	10,120
Coaster	1,279	1,219	1,082	1,130

Source: SANDAG

21.5 Recommended Transit Improvements

Based on the review of the existing transit network, planning documents and transportation impacts, it is recommended to further evaluate the feasibility of providing transit signal priority along the following segment locations. If transit signal priority is feasible, the Proposed Action alternatives should provide transit signal priority improvements.

T-1. Midway Drive, between East Drive to Rosecrans Street

T-2. Rosecrans Street, between Dewey Road and Pacific Highway

T-3. Pacific Highway, between Friars Road and Washington Street

T-4. Taylor Street between Presidio Drive and I-8 Eastbound Ramps

In addition, it is recommended to prepare a Transit Mobility Plan for the Proposed Action alternatives.

The Transit Mobility Plan would include, but is not limited to, the following elements:

- Design standards and guidance
- Transit station amenities
- Provide bus stop amenity improvements within ½ mile
- Transit station services (e.g., bus routes, trolley lines, shuttles, etc.)
- Intelligent Transportation Systems (ITS)
- Feasibility and social assessments
- Wayfinding
- Policies and programs

Figure 21–2 shows the Recommended Transit Improvements.

22.0 CRASH ANALYSIS

Crash data was obtained from the Transportation Injury Mapping System (TIMS) and Statewide Integrated Traffic Records System (SWITRS) for a five-year period from January 2013 through December 2017. During this time period, a total of 52 crashes were reported on the roadway network near the Navy Revitalization Old Town Campus site.

22.1 Vehicular Collisions

Table 22–1 summarize the crashes by location and severity. No fatal crashes were reported within the five-year period. Of the 52 crashes, the majority (24) occurred along Pacific Highway between Kurtz Street to Witherby Street including:

- 2 Vehicle-pedestrian
- 1 Head-on
- 11 Broadside
- 3 rear end
- 2 side swipe
- 1 overturned
- 3 hit object

14 crashes were also reported on Midway Drive between Rosecrans Street and Barnett Avenue during this five-year period.

22.2 Pedestrian & Bicycle Involved Collisions

Of the 52 collisions reported, only two (4) collisions involved a pedestrian. The pedestrian involved collisions occurred on Pacific Highway between Old Town Transit Center to Witherby Street (2) and Kurtz Street between Rosecrans Street to Pacific Highway (2). No bicycle involved collisions were reported during the five-year period.

TABLE 22–1
CRASH SEVERITY BY LOCATION FOR A 5-YEAR PERIOD: 2013 THROUGH 2017

23.0 CONSTRUCTION TRAFFIC ASSESSMENT

23.1 Construction Activities

The Project is anticipated to be constructed through 2049. Staging for all equipment and construction personnel will occur in contained and well managed areas.

23.2 Project-Specific Traffic Control Measures

It would be anticipated that construction operations would result in potential significant construction traffic impacts. Therefore, prior to beginning construction, work zone Traffic Control Plans (TCP) and construction Transportation Management Plans (TMP) should be prepared to avoid temporary construction impacts where possible.

The Plans should be prepared in accordance with all applicable encroachment permits and plans, ordinances, and policies. The Plans should include provisions for the following:

- The applicant should comply with the following work hour recommendations:
    - No site work, building construction, or related activities, including equipment mobilization should be permitted to start on the Project prior to 7:00 a.m. and work for the day should be completed by 7:00 p.m.;
    - No work should be permitted on Sundays or City Holidays;
    - In addition to the above the applicant should erect one or more signs stating the work hour restrictions. Signs should be installed as may be required, in the vicinity of the project construction trailer if a job site trailer is used, or at such other locations as may be deemed appropriate. The sign should be a minimum of 24” x 36” and should be weather proofed.;
- Coordinate with public transit providers to provide access options for workers (where necessary);
- Provide off-site construction worker parking areas and shuttles for workers to/from the job site, as necessary;
- Implement standard safety practices, including installing appropriate barriers between work zones and transportation facilities, placement of appropriate signage, and use of traffic control devices;
- Coordinate with the jurisdictions prior to construction to determine specific traffic handling layouts;
- Protect traffic by using flaggers, warning signs, lights, and barricades to guide vehicles through or around construction zones;
- Restore roadway capacity to the extent feasible during hours when construction activities are not occurring, which could include the use of road plates or temporary paving;
- Clean and restore roadways upon completion of work;
- Limit the length of open trenches to the length allowed by encroachment permits;
- Implement construction schedules and techniques that minimize roadway closures, including the number of cross streets and side streets that may be blocked or otherwise impacted by construction activities;

- Provide detours for cyclists and pedestrians when bike lanes or sidewalks need to be closed;
- Install steel plates over open trenches in inactive construction areas to maintain existing bicycle and pedestrian access after construction hours;
- Enforce speed limits of construction vehicles on all roads;
- Notify emergency response providers of road closures at least one week prior to closures and include the location, date, time and duration of the closure; and
- Abide by encroachment permit conditions, which should supersede conflicting provisions in the Plans.

Preparation and implementation of the Plans would provide mitigation for the short-term, significant construction impacts.

It is recognized that there will be interim scenarios when construction of later phases is occurring simultaneously with occupancy and operation of earlier phases. However, implementation of the recommended Traffic Control Plan would reduce temporary construction impacts to below significant levels.

23.3 Construction Activities for the Proposed Alternatives

Although most of the construction phases are assumed to occur in series, some phases overlap. Specifically, it was assumed that the following combinations of phases could occur simultaneously during the Navy construction for Alternatives 2 through 5.

- Demolition + site preparation
- Grading and utility installation + foundation drilling
- Foundation drilling + building construction
- Grading and utility installation + building construction
- Building construction + paving
- Building construction + architectural coating

It was also assumed that the following combinations of phases could occur simultaneously during the private construction for Alternatives 2 through 5:

- Demolition + site preparation
- Grading and utility installation + foundation drilling + building construction
- Building construction + paving
- Building construction + architectural coating

Note that the worker & vendor trips are daily one-way trips. The hauling trips are total one-way trips.

23.3.1 *No-Action Alternative*

Under the No Action Alternative, the Navy would continue to maintain and repair the existing facilities. NAVWAR would continue to operate at OTC and no change would occur. Hence, there would not be any construction activity in this alternative.

23.3.2 *Alternative 1: Navy Recapitalization at OTC*

The construction activities for Alternative 1 Navy Recapitalization at OTC will include the 6 phases for the duration shown below. Construction is estimated to begin on January 1, 2021 and last until December 31, 2025. None of the construction activities are planned to overlap.

- Demolition (50 days)
- Site Preparation (20 days)
- Grading (45 days)
- Building Construction (1,079 days)
- Paving (55 days)
- Architectural Coating (55 days)

During the Demolition phase, an average of approximately 94 haul trips per day are expected over a 50-day period between January 1, 2021 and March 11, 2021.

A maximum of approximately 1,324 worker trips and 676 vendor trips per day are expected to occur during the Building Construction phase for 1,079 workdays between June 11, 2021 and July 30, 2025. During the grading phase from April 9, 2021 through June 10, 2021, a maximum of approximately 628 haul trips are expected per day.

Appendix AA includes a table summarizing the details of each construction phase for Alternate 1.

23.3.3 *Alternative 2: Higher-density Mixed-use Revitalization*

The construction activities for Alternative 2 Higher-density Mixed-use Revitalization will include the 17 phases for the duration shown below. Construction is estimated to begin on January 1, 2026 and last until December 31, 2049. Construction activities are planned to overlap.

- Demolition 1, (70 days)
- Site Preparation 1, (40 days)
- Grading and Utilities 1, (28 days)
- Foundation Drilling 1, (143 days)
- Building Construction 1, (867 days)
- Paving 1, (19 days)
- Architectural Coating 1, (19 days)
- Grading and Utilities 2, (22 days)
- Foundation Drilling 2, (114 days)
- Building Construction 2, (1,252 days)
- Paving 2, (15 days)
- Architectural Coating 2, (15 days)

- Grading and Utilities 3, (61 days)
- Foundation Drilling 3, (314 days)
- Building Construction 3, (3,772 days)
- Paving 3, (41 days)
- Architectural Coating 3, (41 days)

During the Demolition phase, an average of approximately 431 haul trips per day are expected over a 70-day period between January 1, 2021 and April 8, 2021.

The first overlapping construction phases in Alternative 2 are between June 4, 2026 and December 21, 2026, when Grading and Utilities 1 and Foundation Drilling 1 are planned to overlap. A maximum of approximately 110 worker trips and 32 vendor trips per day are expected to occur during this period over a period of 140 days. A maximum of approximately 1,094 haul trips per day are also expected during the Grading and Utilities Phase, over a period of 28 days.

The second overlapping construction phases in Alternative 2 are between January 1, 2030 and November 17, 2034, when Grading & Utilities 2, Foundation drilling 2 and Building Construction 2 are planned to overlap. A maximum of approximately 2,002 worker trips and 702 vendor trips per day and a maximum of approximately 1,114 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 22 days.

The third overlapping construction phases in Alternative 2 are between January 1, 2035 and March 13, 2036, when Grading & Utilities 3 and Foundation drilling 3 are planned to overlap. A maximum of approximately 110 worker trips and 32 vendor trips per day and a maximum of approximately 1,105 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 61 days.

Appendix AA includes a table summarizing the details of each construction phase Alternate 2.

23.3.4 *Alternative 3: Lower-density Mixed-use Revitalization*

The construction activities for Alternative 3 Lower-density Mixed-use Revitalization will include the 17 phases for the duration shown below. Construction is estimated to begin on January 1, 2026 and last until December 31, 2049. Construction activities are planned to overlap.

- Demolition 1 (70 days)
- Site Preparation 1 (40 days)
- Grading and Utilities 1 (28 days)
- Foundation Drilling 1 (120 days)
- Building Construction 1 (867 days)
- Paving 1 (19 days)
- Architectural Coating 1 (19 days)
- Grading and Utilities 2 (22 days)
- Foundation Drilling 2 (96 days)

- Building Construction 2 (1,252 days)
- Paving 2 (15 days)
- Architectural Coating 2 (15 days)
- Grading and Utilities 3 (61 days)
- Foundation Drilling 3 (264 days)
- Building Construction 3 (3,772 days)
- Paving 3 (41 days)
- Architectural Coating 3 (41 days)

During the Demolition phase, an average of approximately 431 haul trips per day are expected over a 70-day period between January 1, 2021 and April 8, 2021.

The first overlapping construction phases in Alternative 3 are between June 4, 2026 and November 7, 2029, when Grading and Utilities 1 and Foundation Drilling 1 are planned to overlap. A maximum of approximately 1,356 worker trips and 514 vendor trips per day are expected to occur during this period and a maximum of approximately 1,094 haul trips per day are also expected during the Grading and Utilities Phase, over a period of 28 days.

The second overlapping construction phases in Alternative 3 are between January 1, 2030 and November 17, 2034, when Grading & Utilities 2, Foundation Drilling 2 and Building Construction 2 are planned to overlap. A maximum of approximately 1,356 worker trips and 514 vendor trips per day and a maximum of approximately 1,114 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 22 days.

The third overlapping construction phases in Alternative 3 are between January 1, 2035 and September 8, 2049, when Grading & Utilities 3, Foundation Drilling 3 and Building Construction 3 are planned to overlap. A maximum of approximately 1,356 worker trips and 514 vendor trips per day and a maximum of approximately 1,105 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 61 days.

Appendix AA includes a table summarizing the details of each construction phase Alternate 3.

23.3.5 *Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center*

The construction activities for Alternative 4 Higher-density Mixed-use Revitalization including a Transit Center will include the 17 phases for the duration shown below. Construction is estimated to begin on January 1, 2026 and last until December 31, 2049. Construction activities are planned to overlap.

- Demolition 1 (70 days)
- Site Preparation 1 (40 days)
- Grading and Utilities 1 (28 days)
- Foundation Drilling 1 (210 days)

- Building Construction 1 (867 days)
- Paving 1 (19 days)
- Architectural Coating 1 (19 days)
- Grading and Utilities 2 (22 days)
- Foundation Drilling 2 (168 days)
- Building Construction 2 (1,252 days)
- Paving 2 (15 days)
- Architectural Coating 2 (15 days)
- Grading and Utilities 3 (61 days)
- Foundation Drilling 3 (462 days)
- Building Construction 3 (3,772 days)
- Paving 3 (41 days)
- Architectural Coating 3 (41 days)

During the Demolition phase, an average of approximately 431 haul trips per day are expected over a 70-day period between January 1, 2021 and April 8, 2021.

The first overlapping construction phases in Alternative 4 are between June 4, 2026 and November 7, 2029, when Grading and Utilities 1 and Foundation Drilling 1 are planned to overlap. A maximum of approximately 6,762 worker trips and 976 vendor trips per day are expected to occur during this period and a maximum of approximately 1,027 haul trips per day are also expected during the Grading and Utilities Phase, over a period of 28 days.

The second overlapping construction phases in Alternative 4 are between January 1, 2030 and November 17, 2034, when Grading & Utilities 2, Foundation Drilling 2 and Building Construction 2 are planned to overlap. A maximum of approximately 6,762 worker trips and 976 vendor trips per day and a maximum of approximately 1,045 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 22 days.

The third overlapping construction phases in Alternative 4 are between January 1, 2035 and September 8, 2049, when Grading & Utilities 3, Foundation Drilling 3 and Building Construction 3 are planned to overlap. A maximum of approximately 6,762 worker trips and 976 vendor trips per day and a maximum of approximately 1,037 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 61 days.

Appendix AA includes a table summarizing the details of each construction phase Alternate 4.

23.3.6 *Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center*

The construction activities for Alternative 5 Lower-density Mixed-use Revitalization including a Transit Center will include the 17 phases for the duration shown below. Construction is estimated to begin on January 1, 2026 and last until December 31, 2049. Construction activities are planned to overlap.

- Demolition 1 (70 days)
- Site Preparation 1 (40 days)
- Grading and Utilities 1 (28 days)
- Foundation Drilling 1 (220 days)
- Building Construction 1 (867 days)
- Paving 1 (19 days)
- Architectural Coating 1 (19 days)
- Grading and Utilities 2 (22 days)
- Foundation Drilling 2 (176 days)
- Building Construction 2 (1,252 days)
- Paving 2 (15 days)
- Architectural Coating 2 (15 days)
- Grading and Utilities 3 (61 days)
- Foundation Drilling 3 (484 days)
- Building Construction 3 (3,772 days)
- Paving 3 (41 days)
- Architectural Coating 3 (41 days)

During the Demolition phase, an average of approximately 431 haul trips per day are expected over a 70-day period between January 1, 2021 and April 8, 2021.

The first overlapping construction phases in Alternative 5 are between June 4, 2026 and November 7, 2029, when Grading and Utilities 1 and Foundation Drilling 1 are planned to overlap. A maximum of approximately 6,162 worker trips and 810 vendor trips per day are expected to occur during this period and a maximum of approximately 893 haul trips per day are also expected during the Grading and Utilities Phase, over a period of 28 days.

The second overlapping construction phases in Alternative 5 are between January 1, 2030 and November 17, 2034, when Grading & Utilities 2, Foundation Drilling 2 and Building Construction 2 are planned to overlap. A maximum of approximately 6,162 worker trips and 810 vendor trips per day and a maximum of approximately 909 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 22 days.

The third overlapping construction phases in Alternative 5 are between January 1, 2035 and September 8, 2049, when Grading & Utilities 3, Foundation Drilling 3 and Building Construction 3 are planned to overlap. A maximum of approximately 2,290 worker trips and 810 vendor trips per day and a maximum of approximately 902 haul trips per day are expected to occur during the Grading and Utilities Phase, over a period of 61 days.

Appendix AA includes a table summarizing the details of each construction phase Alternate 5.

23.4 General Traffic Control Content

The California Manual on Uniform Traffic Control Devices (MUTCD) states the Traffic Control Plan (TCP) "provides for the reasonably safe and efficient movement of road users through or around temporary traffic control zones while reasonably protecting workers, responders to traffic incidents, and equipment." TCPs define the locations of all roads that would need to be temporarily closed due to construction activities, including hauling of oversized loads by truck, truck routes, and permitted hours for construction vehicles to be operating. The TCPs define the use of warning signs, lights, barricades, cones, direction of travel, posted speed limit, location of temporary barricades, no parking restrictions, etc., according to standard guidelines outlined in the Caltrans Traffic Manual for Construction and Maintenance Work Zones (1996 edition, Revision 2), the Standard Specifications for Public Works Construction, the MUTCD, and the Work Area Traffic Control Handbook (WATCH).

Per the discretion of the City Traffic Engineer, the TCP may also provide measures to ensure that traffic congestion and delay resulting from project construction are minimized by incorporating features such as:

- *Staggered Shift Hours*

  During peak period of construction activity, construction shifts may be staggered to the degree possible, such that employee arrivals and departures from the site will avoid the project area peak hours (7:30a.m. to 8:30 a.m. and 4:30 p.m. to 5:30 p.m.).
- *Truck Scheduling*

  Construction-related truck traffic may be scheduled to avoid travel during peak periods of traffic on the surrounding roadways.

23.5 Project Specific Requirements

Based on the anticipated number of trucks, flagging and stopping traffic is not expected to be necessary. Most of the work will be behind protective barricades. If traffic volumes and safety concerns warrant, a temporary traffic signal will be installed.

Specific measures that will be incorporated into the traffic control plans include:

- Always keeping one lane open in each direction on Pacific Highway, Midway Dive, Sports Arena Boulevard and Barnett Avenue. Neither direction of travel will be closed at any given time.
- Carrying out construction activity during off-peak hours to the extent possible.
- Temporary traffic signals are not expected to be necessary but will be installed, should volumes and safety concerns warrant such an installation, once more specific traffic data is available.
- Providing easy-to-follow detour routes.
- Maintaining access to the nearby community.
- Providing plans showing freeway signage for advance warning of construction.

- Limiting to the extent possible the interruption of use for any pedestrian and bicycle facility in the area.

24.0 VEHICLE MILES TRAVELED

This section presents an evaluation of potential transportation impacts of the Proposed Action alternatives as proposed by the California Governor's Office of Planning and Research (OPR) to implement California State Law Senate Bill (S.B.) 743.

24.1 VMT Background

VMT is a measurement of miles traveled by vehicles within a specified region and for a specified time period. VMT measures the efficiency of the transportation network. VMT's are calculated based on individual vehicle trips generated and their associated trip lengths. VMT accounts for two-way (round-trip) travel and is often estimated for a typical weekday to measure transportation impacts.

24.2 Senate Bill 743

In September 2013, the Governor's Office signed SB 743 into law, starting a process that fundamentally changes the way transportation impact analysis is conducted under CEQA. These changes include the elimination of auto delay, level of service (LOS), and similar measurements of vehicular roadway capacity and traffic congestion as the basis for determining significant impacts. The guidance identifies VMT as the most appropriate CEQA transportation metric, along with the elimination of Auto Delay/LOS for CEQA purposes statewide. The justification for this paradigm shift is that Auto Delay/LOS impacts lead to improvements that increase roadway capacity and therefore induce more traffic and greenhouse gas emissions.

In December 2018, after over five years of stakeholder-driven development, the California Natural Resource Agency certified and adopted the CEQA Statute. Per the CEQA Statute, a lead agency may elect to be governed by the VMT guidelines immediately. However, beginning July 1, 2020, the VMT guidelines shall apply statewide.

24.3 CEQA Statute

The following is an excerpt from Section 15064.3 Determining the Significance of Transportation Impacts.

> Explanation of New Section 15064.3
>
> The new section 15064.3 contains several subdivisions, which are described below. In brief, these guidelines provide that transportation impacts of projects are, in general, best measured by evaluating the project's vehicle miles traveled. Methodologies for evaluating such impacts are already in use for most land use projects, as well as many transit and active transportation projects. Methods for evaluating vehicle miles traveled for roadway capacity projects continue to evolve, however, and so these Guidelines recognize a lead agency's discretion to analyze such projects, provided such analysis is consistent with CEQA and applicable planning requirements.

Subdivision (a): Purpose

Subdivision (a) sets forth the purpose of the entire new section 15064.3. First, the subdivision clarifies that the primary consideration, in an environmental analysis, regarding transportation is the amount and distance that a project might cause people to drive. This captures two measures of transportation impacts: auto trips generated and vehicle miles traveled. These factors were identified by the legislature in SB 743. The last sentence clarifies that automobile delay is not a significant effect on the environment.

Subdivision (b): Criteria for Analyzing Transportation Impacts

While subdivision (a) sets forth general principles related to transportation analysis, subdivision (b) focuses on specific criteria for determining the significance of transportation impacts. It is further divided into four subdivisions: (1) land use projects, (2) transportation projects, (3) qualitative analysis, and (4) methodology.

Subdivision (b)(1): Land Use Projects

SB 743 did not authorize OPR to set thresholds, but it did direct OPR to develop Guidelines "for determining the significance of transportation impacts of projects[.]" (Pub. Resources Code, §21099(b)(2). Therefore, to provide guidance on determining the significance of impacts, subdivision (b)(1) describes factors that might indicate whether the amount of a project's vehicle miles traveled may be significant, or not. Notably, projects that locate within one-half mile of an existing major transit stop or a stop along an existing transit corridor should be presumed to have a less than significant transportation impact.

Subdivision (b)(2): Transportation Projects

While subdivision (b)(1) addresses vehicle miles traveled associated with land use projects, subdivision (b)(2) focuses on impacts that result from certain transportation projects. Subdivision (b)(2) clarifies that projects that reduce VMT, such as pedestrian, bicycle and transit projects, should be presumed to have a less than significant impact. This subdivision further provides that lead agencies have discretion in which measure to use to evaluate roadway, including highway, capacity projects, provided that any such analysis is consistent with the requirements of CEQA and any other applicable requirements (e.g., local planning rules). Importantly, this provision does not prohibit capacity expansion. Finally, recognizing that roadway capacity projects may be analyzed at a programmatic level, subdivision (b)(2) states that lead agencies may be able to tier from a programmatic analysis that adequately addresses the effects of such capacity projects.

Subdivision (b)(3): Qualitative Analysis

Subdivision (b)(3) recognizes that lead agencies may not be able to quantitatively estimate vehicle miles traveled for every project type. In those circumstances, this subdivision encourages lead agencies to evaluate factors such as the availability of transit, proximity to other destinations, and other factors that may affect the amount of driving required by the project.

Subdivision (b)(4): Methodology

Lead agencies have the discretion to choose the most appropriate methodology to analyze a project's vehicle miles traveled. Depending on the project, vehicle miles traveled may be best measures on a per person, per household or other similar unit of measurement. Subdivision (b)(4) also recognizes the role of both models and professional judgment in estimating vehicle miles traveled.

Subdivision (c): Applicability

The new procedures may be used immediately upon the effective date of these Guidelines by lead agencies that are ready to begin evaluating vehicle miles traveled, but jurisdictions will have approximately two years to switch to VMT if they so choose.

25.0 VMT SIGNIFICANCE CRITERIA & METHODOLOGY

25.1 Local / Regional Agency Transition to SB743

Local and regional agencies, as well as transportation professionals, have already begun transitioning to SB 743. The City of San Diego has published the draft *Transportation Study Manual (TSM)* in February 2020. San Diego's local Institute of Transportation Engineers (ITE) SB 743 Subcommittee published the *Guidelines for Transportation Impact Studies in the San Diego Region* in May 2020. Caltrans has also issued interim guidance on how CEQA documents are to be reviewed with SB 743. Though these documents have been published, they have yet to be officially adopted.

Given that the City of San Diego has developed significance thresholds and technical methodologies, the draft *TSM* was utilized for this chapter.

25.2 Significance Criteria

According to the City of San Diego's draft *TSM*, the transportation VMT thresholds of significance are shown in ***Table 25–1***.

TABLE 25–1
VMT SIGNIFICANCE THRESHOLDS

Land Use Type[1]	Thresholds for Determination of a Significant Transportation VMT Impact[2]
Residential	15% below regional average[3] resident VMT/Capita
Commercial Employment	15% below regional average[3] employee VMT/Employee
Industrial Employment	Regional average* employee VMT/Employee
Regional Retail	Zero net increase in total regional VMT[3]
Hotel	See Commercial Employment
Regional Recreational	See Regional Retail
Regional Public Facilities	See Regional Retail
Mixed-Use	Analyze each land use individually per above categories
Redevelopment	Apply the relevant threshold based on proposed land use (ignore the existing land use)
Transportation Projects	Zero net increase in total regional VMT[3]

Footnotes:

1. ***Appendix BB*** contains a copy of Appendix B of the draft City of San Diego TSM for specific land use designations.
2. Projects that exceed these thresholds would have a significant impact.
3. The regional average and total regional VMT are determined using the SANDAG Regional Travel Demand Model. The specific model version and model year will be identified by the Development Services Department's Transportation Development Section.

25.3 Technical Methodology

The technical approach for the Proposed Action alternatives is broken into the following two components.

- Screening Criteria
- SANDAG Model Regional Travel Demand Model

Screening Criteria

According to the draft *TSM*, a project that meets at least one of the following screening criteria would have less than significant VMT impact due to project characteristics and/or location.

1. **Residential or Commercial Project Located in a VMT Efficient Area:** The project is a residential or commercial employment project located in a VMT efficient area (15% or more below the base year average household VMT/capita or VMT/employee) based on the applicable location-based screening map produced by SANDAG.

2. **Industrial Project Located in a VMT Efficient Area:** The project is an industrial employment project located in VMT efficient area (in an area with average or below average base year VMT/employee) based on the applicable location-based screening map produced by SANDAG.

3. **Small Project:** The project is a small project defined as generating less than 300 daily unadjusted driveway trips using the City of San Diego trip generation rates/procedures.

4. **Locally Serving Retail/Recreational Project:** The project is a locally serving retail/recreational project defined as having 100,000 square feet gross floor area or less **and** demonstrates through a market area study that the market capture area for the project is approximately three miles (or less) and serves a population of roughly 25,000 people or less. Locally serving retail is consistent with the definitions of Neighborhood Shopping Center in the San Diego Municipal Code Land Development Code Trip Generation Manual. Locally serving recreation is consistent with the land uses listed in Appendix B of the draft *TSM*, given that it meets the square footage and market capture area above. Adding retail/recreation square footage (even if it is 100,000 square feet gross floor area or less) to an existing regional retail shopping area is **not** screened out.

5. **Locally Serving Public Facility:** The project is a locally serving public facility defined as a public facility that serves the surrounding community or a public facility that is a passive use. The following are considered locally serving public facilities: transit centers, public schools, libraries, post offices, park-and-ride lots, police and fire facilities, and government offices. Passive public uses include communication and utility buildings, water sanitation, and waste management.

6. **Affordable Housing:** The project has access to transit* and is wholly or has a portion that meets one of the following criteria: is affordable to persons with a household income equal to or less than 50% of the area median income (as defined by California Health and Safety Code Section 50093), housing for senior citizens [as defined in Section 143.0720(e)], housing for transitional foster youth, disabled veterans, or homeless persons [as defined in 143.0720(f)]. The units shall remain deed restricted for a period of at least 55 years. The project shall provide no more than the minimum amount of parking per unit, per San Diego Municipal Code Section 143.0744. Only the portion of the project that meets the above criteria is screened out. For example, if the project is 100 units with ten deed-restricted affordable housing units, transportation VMT analysis would not be necessary for the ten affordable units but would be necessary for the remaining 90 units (unless they meet one of the other screening criteria). For purposes of applying the small project screening criteria, the applicant would only include the trip generation for the non-affordable housing portion of the project (since the affordable housing portion is screened out).

   *Access to transit is defined as transit being located within a reasonable walking distance (1/2 mile) from the project driveway.

7. **Mixed-Use Project Screening Considerations:** The project's individual land uses should be compared to the screening criteria above. It is possible for some of the mixed-use project's land uses to be screened out and some to require further analysis. For purposes of applying the small project screening criteria, the applicant would only include the trip generation for portions of the project that are not screened out based on other screening criteria. For example, if a project includes residential and retail, and the retail component was screened out because it is locally serving; only the trip generation of the residential portion would be used to determine if the project meets the definition of a small project.

8. **Redevelopment Project Screening Considerations:** The project is a redevelopment project that demonstrates that the proposed project's total project VMT is less than the existing land use's total VMT. Exception: If a project replaces affordable housing (either deed restricted or other types of affordable housing) with a smaller number of moderate-income or high-income residential units, the project is not screened out and must analyze VMT impacts per *Table 25-1*.

In addition to the above screening criteria provided in the draft *TSM*, the CEQA Statute, Section 15064.3 subdivision (b)(1), states that a project proposed within ½ mile of an existing major transit stop or an existing stop along a highlight quality transit corridor should be presumed to cause a less than significant transportation impact.

Since the CEQA Statute does not further define the terms “1/2 mile”, “major transit stop”, and “high quality transit corridor”, the draft *TSM* or the OPR’s *Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory)* was utilized to provide clarity on these terms.

> *<u>½ mile</u> refers to the walking distance from the project driveway.*
>
> *<u>Major transit stop</u> refers to an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.*
>
> *<u>A high-quality transit corridor</u> refers to a corridor with a fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.*

SANDAG Regional Travel Demand Model

If a project is not screened out, a detailed transportation VMT analysis using the SANDAG Regional Travel Demand Model is required per the draft *TSM*. The regional SANDAG forecast model is based on the 2050 Regional Transportation Plan (RTP) that was adopted by the Board of Directors on October 15, 2013. This forecast model serves as the foundation for *San Diego Forward: The Regional Plan* and other planning documents across the region. In developing the RTP, the "Series 13" traffic forecast model series was prepared. For the Proposed Action alternatives, the VMT calculations were conducted using Series 13, which is an Activity Based Model (ABM). The ABM was developed using travel behavior survey information from the San Diego Household Travel Behavior Surveys, data from the Community Survey, U.S. Census Bureau and the most current traffic and transit observations that were available at the time the model was prepared.

Table 25–2 further details the methodology based on the land use per the draft *TSM*.

TABLE 25–2
TRANSPORTATION VMT ANALYSIS METHODOLOGY BY LAND USE

Land Use Type	Thresholds for Determination of a Significant Transportation VMT Impact
Residential	**For projects that generate less than 2,400 daily unadjusted driveway trips:** Identify the location of the project on the SANDAG Resident VMT/Capita map. The project's Resident VMT/Capita will be considered the same as the Resident VMT/Capita of the census tract it is located in. Compare the project's Resident VMT/Capita to the threshold to determine if the impact is significant OR input the project into the SANDAG Regional Travel Demand Model to determine the project's Resident VMT/Capita. **For projects that generate greater than 2,400 daily unadjusted driveway trips:** Input the project into the SANDAG Regional Travel Demand Model for SANDAG to provide the project's Resident VMT/Capita. To perform the analysis, all project land uses should be inputted, and the VMT/Capita should be determined using the same method/scripts that SANDAG utilizes to develop the SANDAG Resident VMT/Capita maps.
Commercial Employment	**For projects that generate less than 2,400 daily unadjusted driveway trips:** Identify the location of the project on the SANDAG Employee VMT/Employee map. The project's Employee VMT/Employee will be considered the same as the Employee VMT/Employee of the census tract it is located in. Compare the project's Employee VMT/Employee to the threshold to determine if the impact is significant OR input the project into the SANDAG Regional Travel Demand Model to determine the project's Employee VMT/Employee. **For projects that generate greater than 2,400 daily unadjusted driveway trips:** Input the project into the SANDAG Regional Travel Demand Model for SANDAG to provide the project's Employee VMT/Employee. To perform the analysis, all project land uses should be inputted, and the VMT/Capita should be determined using the same method/scripts that SANDAG utilizes to develop the SANDAG Employee VMT/Employee maps.
Industrial Employment	**For projects that generate less than 2,400 daily unadjusted driveway trips:** Identify the location of the project on the SANDAG Employee VMT/Employee map. The project's Employee VMT/Employee will be considered the same as the Employee VMT/Employee of the census tract it is located in. Compare the project's Employee VMT/Employee to the threshold to determine if the impact is significant OR input the project into the SANDAG Regional Travel Demand Model to determine the project's Employee VMT/Employee. **For projects that generate greater than 2,400 daily unadjusted driveway trips:** Input the project into the SANDAG Regional Travel Demand Model to determine the project's Employee VMT/Employee. To perform the analysis, all project land uses should be inputted, and the VMT/Capita should be determined using the same method/scripts that SANDAG utilizes to develop the SANDAG Employee VMT/Employee maps.

TABLE 25–2
TRANSPORTATION VMT ANALYSIS METHODOLOGY BY LAND USE

Land Use Type	Thresholds for Determination of a Significant Transportation VMT Impact
Regional Retail	Calculate the change to regional VMT using the SANDAG Travel Demand Model. To calculate the change in regional VMT, the regional retail component of the project should be inputted into the travel demand model (year that is used to determine the VMT thresholds). The "with project regional retail" regional VMT produced by the model run is compared to the "no project" regional VMT.
Hotel	See Commercial Employment
Regional Recreational	See Regional Retail
Regional Public Facilities	See Regional Retail
Mixed-Use	Analyze each land use individually per above categories
Redevelopment	Analyze each land use individually per above categories Exception: If a project replaces affordable housing (either deed restricted or other affordable housing) with a smaller number of moderate-income or high-income residential units, the VMT assessment should incorporate an estimate of the aggregate VMT increase experienced by the displaced residents. The additional VMT due to displaced residents should be incorporated into the Resident VMT/Capita for the project.
Transportation Projects	Calculate the change to regional VMT using the SANDAG Travel Demand Model. To calculate the change in regional VMT, the roadway network in the model should be adjusted to include the proposed transportation project. The "with transportation project" regional VMT produced by the model run is compared to the "no transportation project" regional VMT do determine if there is an increase in regional VMT.

26.0 VMT ANALYSIS

26.1 Screening Criteria

Based on the screening criteria described in *Section 25.3*, draft *TSM* Criteria 1, 8, and 9, as well as the CEQA Statute Criteria, are applicable.

Residential or Commercial Project Located in a VMT Efficient Area: The Proposed Action alternatives propose a mix of residential and commercial land use. Based on the location-based screening map produced by SANDAG, the residential and commercial components of Proposed Action alternatives are located in an area that is 25.5% and 10.6% below the regional mean, respectively. Therefore, only the residential component of the Proposed Action alternatives is screened out.

Mixed-Use Project Screening Considerations: As evaluated above, this consideration to compare the individual land uses to the screening criteria is applied. Since only the residential portion of the Proposed Action alternatives is screened out, further VMT analysis is needed.

Redevelopment Project Screening Considerations: The Proposed Action alternatives total VMT is expected to be greater than the existing total VMT. Therefore, further VMT analysis is needed.

CEQA Statute Criteria: The Old Town Transit Center was identified to be a major transit center. ***Table 25–1*** tabulates the distance from the Proposed Action Alternative to the Old Town Transit Center.

Based on the above screening criteria evaluation, the Proposed Action alternative is presumed to have a **less than significant** transportation impact.

Table 26–2 summarizes the screening criteria results.

TABLE 26–1
DISTANCE TO MAJOR TRANSIT STOP

Proposed Action Alternative	Distance to Old Town Transit Center
Year 2050 with Alternative 1: Navy Recapitalization at OTC	½ mile[1]
Year 2050 with Alternative 2: Higher-density Mixed-use Revitalization	½ mile[1]
Year 2050 with Alternative 3: Lower-density Mixed-use Revitalization	½ mile[1]
Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center	Within the Site
Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center	Within the Site

Footnotes:

1. Walking distance measured from the existing OTC driveway to the existing Old Town Transit Center driveway.

TABLE 26–2
SCREENING CRITERIA RESULTS

Proposed Action Alternative	Screened out per draft *TSM*?	Screened out Per CEQA?
Year 2050 with Alternative 1: Navy Recapitalization at OTC	No	Yes
Year 2050 with Alternative 2: Higher-density Mixed-use Revitalization	No[1]	Yes
Year 2050 with Alternative 3: Lower-density Mixed-use Revitalization	No[1]	Yes
Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center	No[1]	Yes
Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center	No[1]	Yes

Footnotes:

1. The "No" designation is applicable to the retail, office and hotel land use components of the Proposed Action alternatives. The residential land use component was screened out based on the SANDAG screening maps.

26.2 SANDAG Regional Travel Model

The SANDAG Regional Travel Model Series 13 was utilized based on a methodology developed by SANDAG to implement SB 743. ***Table 26–3*** tabulates the VMT per resident model results for the region and Proposed Action alternatives. ***Table 26–4*** tabulates the VMT per employee model results for the region and Proposed Action alternatives. ***Appendix CC*** contains SANDAG Regional Travel Model VMT reports.

Since the Proposed Action alternative VMT/resident and VMT/employee are less than their respective significance thresholds, the Proposed Action alternatives would have a **less than significant** VMT impact.

TABLE 26–3
VMT PER RESIDENT REGIONAL COMPARISON

Proposed Action Alternative	Region[1]	Threshold[2]	Proposed Action	Impact?
Year 2050 with Alternative 1: Navy Recapitalization at OTC	14.4	12.2	NA[3]	NA[3]
Year 2050 with Alternative 2: Higher-density Mixed-use Revitalization			6.6	No
Year 2050 with Alternative 3: Lower-density Mixed-use Revitalization			8.0	No
Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center			4.5	No
Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center			5.3	No

Footnotes:

1. Based on the SANDAG Regional Travel Model output for the Year 2050 no build scenario.
2. Based on 15% below the Regional VMT Average.
3. N.A. = Not Applicable

TABLE 23–4
VMT PER EMPLOYEE REGIONAL COMPARISON

Proposed Action Alternative	Region[1]	Threshold[2]	Project	Impact?
Year 2050 with Alternative 1: Navy Recapitalization at OTC	21.2	18.0	13.6	No
Year 2050 with Alternative 2: Higher-density Mixed-use Revitalization			12.8	No
Year 2050 with Alternative 3: Lower-density Mixed-use Revitalization			13.5	No
Year 2050 with Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center			11.1	No
Year 2050 with Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center			11.5	No

Footnotes:
1. Based on the SANDAG Regional Travel Model output for the Year 2050 no build scenario.
2. Based on 15% below the Regional VMT Average.

26.3 VMT Analysis Summary

Based on the VMT analysis, the Proposed Action alternatives is presumed to have a less than significant transportation impact. Furthermore, a detailed evaluation of the VMT produced by Proposed Action alternatives are calculated to be less than significant. ***Table 26–5*** summarizes the VMT impact findings

TABLE 26–5
VMT IMPACT SUMMARY

Analysis Methodology	Transportation Impact Findings
Screening Criteria	Presumed Less than Significant
SANDAG Regional Travel Demand Model	Less than Significant

27.0 TRANSPORTATION DEMAND MANAGEMENT

Transportation Demand Management (TDM) is a set of strategies, programs, services, and physical elements that influence travel behavior by mode, frequency, time, route, or trip length to help achieve more efficient and sustainable transportation facilities. TDM can help reduce the single-occupant vehicles (SOV) vehicular trips which in turn would help reduce trips by the Proposed Action alternative by providing users with options to alternative forms of transportation and providing users with information about programs and services. TDM can be beneficial to all users, including residents, employees, guests, property owners/managers, and the community as a whole.

This document provides a list of possible TDM measures that can be implemented by the Proposed Action alternatives. The list of possible TDM measures were obtained from the City of San Diego's draft *Transportation Study Manual*, June 2020. Strategies are categorized as primary (P) or supportive (S). A primary strategy that can be directly calculated using California Air Pollution Control Officers Association's *Quantifying Greenhouse Gas Mitigation Measures* report, August 2020. Supportive strategies boost participation or eligibility rates and make the primary strategy more effective.

Below is the list of possible TDM measures organized into four (4) categories identified as "P" primary measures, or "S" supplemental measures accompanying a "P" measure. It should be noted that some of the measures may require a detailed site plan to further conduct a quantification assessment.

1. *Neighborhood / Site Enhancements*
    a. Bicycle Infrastructure Improvement (P)
    b. Bike Share/Micromobility Fleet (P)
    c. Bicycle Riders Guide (S)
    d. Electric Bicycle/Micromobility (S)
    e. Subsidized Bicycle Expenses (S)
    f. Bicycle Parking (S)
    g. Bicycle Supportive Programs (S)
    h. DIY Bicycle Repair Stands (S)
    i. Onsite Showers and Lockers (S)
    j. Pedestrian Network Improvements (P)
    k. Walking Supportive Programs (S)
    l. Subsidized Walking Expenses (S)
    m. Traffic Calming (P)
    n. Car Share (P)
    o. Passenger Loading Zones (S)
    p. Mobility Hub (S)

2. *Parking Policy / Pricing*
    a. Limit Parking Supply (P)

b. Unbundled Parking (P)
c. Priced Public Parking (P)
d. Parking Cash-Out Program (P)
e. Residential Area Parking Permit (S)
f. Time-Limited Street Parking (S)
g. Real-Time Parking Information (S)

3. *Commute Trip Reduction Programs*
   a. Commute Trip Reduction Program
      - Carpooling Program and Encouragement (P)
      - Alternative Work Schedules (P)
      - Vanpool Program (P)
      - Transportation Coordinator (S)
      - Preferential Carpool Parking (S)
      - Bicycle End Trip Facilities (S)
      - Transit Pass Subsidy (P)
      - Commute Trip Reduction Marketing (P)
      - Car Share (P)
   b. Transit Pass Subsidy (P)
   c. Price Workplace Parking (P)
   d. Telecommuting (P)
   e. Commute Trip Reduction Marketing (P)
   f. Guaranteed Ride Home Program (S)
   g. Last Mile Connections (S)

While other development projects have taken quantifiable credit for the implementation of TDM, ranging from two to four percent (SDIA Airport Development Plan) to 10 to 15 percent (e.g. SDSU Mission Valley Campus Master Plan EIR = 14.4%), no quantifiable credit was taken for the implementation of TDM mitigation measures for the Proposed Action alternatives. Nonetheless, a comprehensive TDM plan is recommended to be prepared for the Proposed Action alternatives.

It is recommended that the comprehensive TDM plan be tailored depending on whether transit is consolidated at the OTC Site.

It is recommended that the following process be established for future project-specific level clearances. Prior to approval of any discretionary project that is forecast to generate more than 100 peak hour trips, the project developers shall prepare a TDM program that is designed to reduce generated traffic and help lessen traffic impacts on study area intersections, street segments, and freeway segments. A key component of the TDM Program is to make employers and employees of the project site aware of the various programs offered. To this end, a Transportation Management Coordination Program (TMCP) would reach out to employers and employees to directly promote the benefits of TDM. The TMCP would be responsible for maintaining a website which would offer ride-matching services, transit information, and serve as a passive source of information for those interested in TDM. A Transportation Information Center would be maintained on the OTC Site, where employers and employees can obtain information about commuter programs and real-time information for planning travel without the use of an automobile.

Once the TDM Program is implemented, project developers would provide a quantitative assessment of the reduction of trips from the program and information on implementation and monitoring as part of their annual reporting obligations.

28.0 TRANSPORTATION SYSTEMS MANAGEMENT

The City of San Diego includes future traffic signal communication network elements in their Traffic Signal Communications Master Plan (2014). Part of the Master Plan would be to implement an Intelligent Transportation Systems (ITS) program on key transportation corridors within the City. ITS enables intersections to operate as part of a coordinated system, allows for remote intersection monitoring from the City's Traffic Management Center, and provides flexibility to remotely change signal timings from the Traffic Management Center in response to changes in traffic flows or incidents. ITS provides a fully responsive traffic signal system based on real time traffic conditions that can provide instantaneous traffic information and predictive time information to users along access corridors. Additionally, ITS will increase mobility at intersections for all modes of travel including motorists, bicyclists, pedestrians, transit and emergency vehicles.

Intersection improvements designed to address the significant impacts of the Proposed Action alternatives consist of the design, the construction, and integration of ITS improvements, which include, but are not limited to: vehicle detection, computer hardware and networking, fiber-optic communication system upgrades, closed circuit TV cameras, changeable message signs, blank-out signs, equipment and networking management, traffic signal modifications, Traffic Management Center and Decision Support System integration, software licensing, high resolution data, connected vehicle technology, upgrading outdated software and equipment, adaptive traffic signal controllers and cabinets, lane control management, and other improvements to the ITS network. The ITS improvements would focus on intersections along corridors potentially affected by the Proposed Action alternatives, specifically those where physically widening roadways would not be feasible.

It is recommended that the following process be established for future project-specific level clearances. Prior to approval of any discretionary project that is forecast to generate more than 100 peak hour trips, the project developers shall prepare a traffic improvement analysis for any facilities under the jurisdiction of the City of San Diego at which the project is anticipated to contribute more than 50 peak hour trips and where a significant unavoidable impact was calculated in this report. ITS improvements should be considered if transportation analysis demonstrates such improvements can achieve acceptable vehicle LOS.

Table 28–1 below comprises intersections and segments where significant unavoidable impacts were calculated that would benefit from TSM and TDM measures. These locations would be benefitted by TSM and TDM under all Proposed Action alternatives:

TABLE 28–1
SIGNIFICANT/UNAVOIDABLE IMPACTS
BENEFITING FROM TSM AND TDM

TABLE 28–1
SIGNIFICANT/UNAVOIDABLE IMPACTS
BENEFITING FROM TSM AND TDM

I-8: Hotel Circle to SR-163	Alt 4-F-10

General Notes:

1. Impacts shown are listed as Alternative 4 impacts given Alternative 4 is the highest density, worst-case analysis in this report. Implementation of TSM and TDM applies to all Proposed Action alternative significant/unavoidable impacts.
2. Freeway impacts would benefit from the implementation of TDM measures for all Proposed Action alternative significant/unavoidable impacts.

29.0 CONCLUSIONS

The Navy OTC Revitalization project proposes to revitalize NAVBASE Point Loma's OTC site located north of downtown San Diego and south of Old Town San Diego, approximately 1/2-mile north of San Diego International Airport. OTC comprises two sites totaling 70.5 acres: OTC Site 1 is 48.7 acres and OTC Site 2 is 21.8 acres. OTC Site 1 is bordered by Pacific Highway to the west, Interstate 5 to the north and east, a railroad right-of-way to the east, and Barnett Avenue to the south. OTC Site 2 is adjacent to OTC Site 1 to the west. OTC Site 2 is bordered by Midway Drive to the west, Rosecrans Street to the North, Pacific Highway to the east, and Barnett Avenue to the south.

The Proposed Action would revitalize OTC through demolition and construction of buildings, utilities, and infrastructure to provide secure, safe, modern state-of-the-art facilities to meet NAVWAR's operational mission. The revitalization of OTC may be accomplished through Navy recapitalization or a number of public-private development scenarios. Through the alternative development process, five action alternatives were identified that meet the purpose and need for the Proposed Action. One action alternative analyzes recapitalization of OTC with Navy funds, and four action alternatives analyze revitalization of OTC with various densities in collaboration with a private developer.

In addition to the No Action alternative, the following five action alternatives were analyzed in this report:

- Alternative 1: Navy Recapitalization at OTC
- Alternative 2: Higher-density Mixed-use Revitalization
- Alternative 3: Lower-density Mixed-use Revitalization
- Alternative 4: Higher-density Mixed-use Revitalization including a Transit Center
- Alternative 5: Lower-density Mixed-use Revitalization including a Transit Center

Below are the number of impacts calculated for each Proposed Action alternative based on the analysis performed in this report:

Proposed Action Alternative	**No. of Impacts**					
	Intersections	**Segments**	**Freeways**	**Ramp Meters**	**VMT per Capita**	**VMT per Employee**
CUMULATIVE IMPACTS						
Year 2050 with Alternative 1	8	1	0	0	0	0
Year 2050 with Alternative 2	25	25	10	1	0	0
Year 2050 with Alternative 3	23	25	10	1	0	0
Year 2050 with Alternative 4	26	25	10	1	0	0
Year 2050 with Alternative 5	26	25	10	1	0	0
DIRECT IMPACTS						
Year 2030 with Alternative 2 (25%) (worst-case highest intensity development)	13	12	7	1	0	0

In total, 36 intersections, 37 segments, 15 freeway segments and one ramp meter were analyzed, for a grand total of 89 facilities. VMT impacts were analyzed using VMT per capita and VMT per employee metrics for each Proposed Action alternative. Active transportation modes such as pedestrian, bicycle and transit were evaluated and recommendations were made for enhancing existing facilities.

Implementation of Alternative 1 would have the fewest impacts to the study area locations in this report. Mitigation measures are recommended for the nine total impacted locations, of which five would be fully mitigated and four impacts would remain significant and unavoidable.

Implementation of Alternative 2 would result in 61 significant impacts. Mitigation measures are recommended for the 61 total impacted locations, of which 32 would be fully mitigated and 29 impacts would remain significant and unavoidable.

Implementation of Alternative 3 would result in slightly fewer significant impacts than Alternative 2. Mitigation measures are recommended for the 59 total impacted locations, of which 33 would be fully mitigated and 26 impacts would remain significant and unavoidable.

Implementation of Alternative 4 would result in the similar significant impacts as Alternatives 2 & 3. Mitigation measures are recommended for the 62 total impacted locations, of which 33 would be fully mitigated and 29 impacts would remain significant and unavoidable.

Implementation of Alternative 5 would result in the same significant impacts as Alternative 4. Mitigation measures are recommended for the 62 total impacted locations, of which 33 would be fully mitigated and 29 impacts would remain significant and unavoidable.

Together with Caltrans, SANDAG has prepared a concept plan for reconstructing the I-5/Old Town Avenue interchange. As part of this major infrastructure improvement, the existing I-5/Old Town Avenue interchange would be replaced with a new bridge and reconfigured on- and off-ramps. This project would include: a high-occupancy vehicle (HOV) direct access ramp into the future on-site transit center to/from southbound I-5 (assuming the transit center is consolidated on the OTC Site); direct access ramps to the OTC Site to/from I-5, the reconstruction and widening of the I-5/Old Town Avenue interchange; and the realignment and signalization of the Pacific Highway/Barnett Avenue intersection. With the enhanced capacity of the new interchange and direct access to the site, traffic volumes accessing the OTC Site would shift to the new interchange, thus reducing volumes on Pacific Highway, Camino Del Rio W., Hancock Street, Witherby Street and surrounding surface streets. Construction of the interchange improvements would mitigate several impacts in the immediate vicinity of the OTC Site.

Figure 29–1 provides a concept plan of the interchange improvements.

Transportation Demand Management and Transportation Systems Management measures are recommended in this report. TDM can help reduce the single-occupant vehicles (SOV) vehicular trips which in turn would help reduce trips by the Proposed Action alternative by providing users with options to alternative forms of transportation and providing users with information about programs and services. TDM can be beneficial to all users, including residents, employees, guests, property owners/managers, and the community as a whole.

TSM can be implemented through Intelligent Transportation Systems (ITS) improvements. ITS provides a fully responsive traffic signal system based on real time traffic conditions that can provide instantaneous traffic information and predictive time information to users along access corridors. Additionally, ITS will increase mobility at intersections for all modes of travel including motorists, bicyclists, pedestrians, transit and emergency vehicles.

Preparation of a Transportation Demand Management (TDM) Plan and participation in the implementation of Transportation Systems Management (TSM) measures are proposed in this report as partial mitigation at locations with significant and unavoidable impacts.

Recommendations for pedestrian, bicycle and transit modes of transportation are categorized as "Tier 1" and "Tier 2" improvements. Tier 1 improvements are recommended to be implemented by the Proposed Action alternatives as mitigation measures, and Tier 2 improvements are recommended for consideration. In total, 13 pedestrian and bicycle improvements are recommended to be implemented and 13 pedestrian and bicycle improvements are recommended to be considered. For the transit network, four improvements are recommended to be further evaluated for feasibility of implementation.

The VMT analysis provided in this report concludes no significant VMT impacts would occur with development of the Proposed Action alternatives.

APPENDIX A

INTERSECTION METHODOLOGY

HIGHWAY CAPACITY 6th EDITION MANUAL
LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

In the Highway Capacity Manual 6th Edition (HCM 6), Level of Service for signalized intersections is defined in terms of delay. Delay is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. Specifically, Level of Service criteria are stated in terms of the average control delay per vehicle for a 15-minute analysis period. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay.

Delay is a complex measure, and is dependent on a number of variables, including the quality of progression, the cycle length, the green ratio, and the v/c ratio for the lane group or approach in question.

LEVEL OF SERVICE	CONTROLLED DELAY PER VEHICLE (SEC)		
A		≤	10.0
B	10.1	to	20.0
C	20.1	to	35.0
D	35.1	to	55.0
E	55.1	to	80.0
F		>	80.0

Level of Service A describes operations with very low delay, (i.e. less than 10.0 seconds per vehicle). This occurs when progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

Level of Service B describes operations with delay in the range of 10.1 to 20.0 seconds per vehicle. This generally occurs with good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.

Level of Service C describes operations with delay in the range of 20.1 to 35.0 seconds per vehicle. These higher delays may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear in the level. The number of vehicles stopping is significant at this level, although many still pass through the intersections without stopping.

Level of Service D describes operations with delay in the range of 35.1 to 55.0 seconds per vehicle. At Level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.

Level of Service E describes operations with delay in the range of 55.1 to 80.0 seconds per vehicle. This is considered to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycle failures are frequent occurrences.

Level of Service F describes operations with delay in excess of 80.0 seconds per vehicle. This is considered to be unacceptable to most drivers. This condition often occurs with over-saturation (i.e. when arrival flow rates exceed the capacity of the intersection). It may also occur at high v/c ratios below 1.00 with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing causes to such delay levels.

HIGHWAY CAPACITY 6th EDITION MANUAL
LEVEL OF SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS

In the Highway Capacity Manual 6th Edition (HCM 6), Level of Service for unsignalized intersections is determined by the computed or measured control delay and is defined for each minor movement. Level of Service is not defined for the intersection as a whole. Delay is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The criteria are given in the following the table, and are based on the average control delay for any particular minor movement.

LEVEL OF SERVICE	AVERAGE CONTROL DELAY SEC/VEH			EXPECTED DELAY TO MINOR STREET TRAFFIC
A	0.0	$\leq$	10.0	Little or no delay
B	10.1	to	15.0	Short traffic delays
C	15.1	to	25.0	Average traffic delays
D	25.1	to	35.0	Long traffic delays
E	35.1	to	50.0	Very long traffic delays
F		>	50.0	Severe congestion

Level of Service F exists when there are insufficient gaps of suitable size to allow a side street demand to safely cross through a major street traffic stream. This Level of Service is generally evident from extremely long control delays experienced by side-street traffic and by queuing on the minor-street approaches. The method, however, is based on a constant critical gap size; that is, the critical gap remains constant no matter how long the side-street motorist waits. LOS F may also appear in the form on side-street vehicles selecting smaller-than-usual gaps. In such cases, safety may be a problem, and some disruption to the major traffic stream may result. It is important to note that LOS F may not always result in long queues but may result in adjustments to normal gap acceptance behavior, which are more difficult to observe in the field than queuing.

In most cases at Two-Way Stop Controlled (TWSC) intersections, the critical movement is the minor-street left-turn movement. As such, the minor-street left-turn movement can generally be considered the primary factor affecting overall intersection performance. The lower threshold for LOS F is set at 50 seconds of delay per vehicle. There are many instances, particularly in urban areas, in which the delay equations will predict delays of 50 seconds (LOS F) or more for minor-street movements under very low volume conditions on the minor street (less than 25 vehicle/hour). Since the first term of the equation is a function only of the capacity, the LOS F threshold of 50 sec/vehicle is reached with a movement capacity of approximately 85 vehicle/hour or less.

This procedure assumes random arrivals on the major street. For a typical four-lane arterial with average daily traffic volumes in the range of 15,000 to 20,000 vehicles per day (peak hour, 1,500 to 2,000 vehicle/hour), the delay equation used in the TWSC capacity analysis procedure will predict 50 seconds of delay or more (LOS F) for many urban TWSC intersections that allow minor-street left-turn movements. **The LOS F threshold will be reached regardless of the volume of minor-street left-turn traffic.** Not-withstanding this fact, most low-volume minor-street approaches would not meet any of the volume or delay warrants for signalization of the *Manual on Uniform Traffic Control Devices* (MUTCD) since the warrants define an asymptote at 100 vehicle/hour on the minor approach. As a result, many public agencies that use the HCM 6 Level of Service thresholds to determine the design adequacy of TWSC intersections may be forced to eliminate the minor-street left-turn movement, even when the movement may not present any operational problem, such as the formation of long queues on the minor street or driveway approach.

APPENDIX B

CALTRANS RAMP METERING DATA AND TRAFFIC VOLUMES

Location (I.D.)	Route	Dir	Period	Cars per green	Sec./ Cycle	(per lane) Veh./hr	Total # lanes	HOV
Old Town Ave to 5 SB (ID 10411)	5	SB	15:00 - 19:00	1	6.32 - 10.24	570 -352	1	No

Intersection Summary	
HCM 6th Ctrl Delay	13.9
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

APPENDIX F

RIDERSHIP & TRIP GENERATION ESTIMATES FOR PROPOSED AUTOMATED PEOPLE MOVER, PREPARED BY WSP, MARCH 31, 2020

MEMORANDUM

TO: Sharon Humphreys, Richard Chavez, Rachel Kennedy, Danny Veeh & Keith Greer (SANDAG)

FROM: Seth Torma, Pete Ruscitti & Ryan Whipple (WSP)

SUBJECT: **Ridership & Trip Generation Estimates for Proposed Automated People Mover**

DATE: March 31, 2020

To respond to U.S. Navy requests for information to support the *Navy Old Town Campus Revitalization Draft Environmental Impact Statement (EIS)* traffic analysis, this memorandum documents the basis of the preliminary daily ridership estimates included in SANDAG's 2019 *Airport Connectivity Analysis* for a potential automated people mover (APM) connecting San Diego International Airport (SDIA) to a proposed Central Mobility Hub (CMH). Vehicular traffic generation estimates for the APM are also provided. This memorandum focuses on Concepts 1 and 2 from the *Airport Connectivity Analysis*, as these two concepts included a CMH at the Naval Information Warfare Systems Command (NAVWAR) site.

BACKGROUND

In December 2018, SANDAG established a temporary subcommittee of the Board of Directors, advisory in nature, to identify future transportation solutions to improve vehicular and transit connectivity to SDIA. The work of the Airport Connectivity Subcommittee began in December 2018 and concluded September 2019 with the release of the *Airport Connectivity Analysis*. As part of this preliminary study, SANDAG developed initial ridership estimates for several new transit connections to SDIA, including two options for an APM connecting to a potential CMH at the Naval Base Point Loma Old Town Complex (or NAVWAR). At the conclusion of that effort, SANDAG recognized that additional work was required to refine the proposed concepts. The *Airport Connectivity Analysis* acknowledges this need and recommends additional modeling and evaluation of potential transit ridership.

As discussed above, the Navy and other stakeholders should recognize that SANDAG will conduct additional planning, modeling analysis, preliminary engineering, environmental analysis, and interagency coordination to refine the transit ridership projections associated with the potential CMH and APM. Similarly, SANDAG will work directly with the San Diego County Regional Airport Authority (SDCRAA), the Unified Port of San Diego, the City of San Diego, and other stakeholders to develop further concepts for roadway improvements on Harbor Drive, Laurel Street, Grape Street, Hawthorn Street, and other key access roads, as well as conceptual designs for the potential APM alignments.

This memorandum also discusses several off-model adjustments that SANDAG included in the *Airport Connectivity Analysis* to evaluate the potential APM ridership. These adjustments should not be relied upon to finalize roadway plans, traffic mitigations, or

other related infrastructure until further analysis and stakeholder coordination has been conducted.

ANALYSIS INPUT

Table 1 shows the ridership estimates from the *Airport Connectivity Analysis* associated with Concepts 1 and 2, which include connecting the SDIA to the NAVWAR facility with an APM either in a tunnel or above grade. The ridership estimate consists of two components, which are detailed further in the sections that follow:

- Modeled APM ridership to SDIA—represented as boardings and alightings—derived from the SANDAG Series 13 Regional Travel Demand Model (model)
- Off-model ridership adjustments accounting for design features and potential policies

As published in the *Airport Connectivity Analysis,* the data presented in Table 1 represent APM boardings and alightings at the SDIA terminals**,** whereas the key metric to estimate vehicular trip generation for the CMH is APM boardings and alightings at the CMH**.** These two values are the same in Concept 1 because the APM only serves the CMH and the SDIA terminals, without intermediate stops. The APM in Concept 2 serves two intermediate stops—the SDIA Rental Car Center and the planned development at Harbor Island East Basin—each with its own boardings and alightings. The Concept 2 APM has 19,800 boardings and alightings at the CMH, compared to 16,500 at the SDIA terminals.

Table 1 APM Daily Ridership at SDIA, 2050

	Modeled APM Ridership to/from SDIA	**Off-Model Adjustments for Design Features & Potential Policies**	**Total Potential APM Ridership to/from SDIA**
Concept 1 NAVWAR Tunnel APM	20,400	24,700	45,100
Concept 2 NAVWAR Surface APM	16,500 *(19,800 at CMH due to intermediate stops)*	27,600	44,100

Sources: SANDAG Airport Connectivity Analysis (2019), Table 5-2, pg. 41; SANDAG Series 13 Regional Travel Demand Model.

SDIA TRAFFIC-REDUCTION GOAL FROM STAKEHOLDERS

Stakeholder agencies informed SANDAG that, by 2050, an average daily traffic (ADT) reduction of approximately 30% would be needed at the SDIA terminals. This is necessary to allow Harbor Drive, Laurel Street, Grape Street, Hawthorn Street, and other SDIA access roadways to maintain traffic flow and avoid gridlock congestion. A subsequent traffic analysis will be performed by SANDAG to confirm this assumption.

CMH CONCEPTUAL DESIGN CAPACITY

Consistent with the traffic-reduction goal provided by stakeholders, the project team sized the CMH—in particular, the curb space for pickups/drop-offs—to accommodate approximately 30% of the anticipated daily traffic to SDIA in 2050.[1] Using 30% of the SDIA projected total of approximately 135,000 ADT at the terminals yields approximately 40,000 ADT for airport pickup/dropoff at the CMH.[2]

MODELED RIDERSHIP

The table provided as Attachment A to this memorandum specifies the modeled parameters that yielded the modeled APM ridership for Concept 1 and Concept 2. These model runs include the following key assumptions:

- Old Town Transit Center (OTTC) relocation to the CMH
- Elimination of the Middletown light rail transit station
- APM connection between the CMH and SDIA[3]
- Sub-regional transportation hub connections, featuring high-speed transit and transit-oriented development, representing SANDAG's *5 Big Moves* regional strategy
- Toll to enter the SDIA terminal driveways
- Land use, network, and other updates provided by stakeholders including:
  - *SDIA Airport Development Plan* data provided by SDCRAA
  - *Port Master Plan Update* details provided by the Unified Port of San Diego
  - Community plan assumptions provided by the City of San Diego
- **Concept 2 Only:** Additional APM stations serving the SDIA Rental Car Center and Harbor Island East Basin.

OFF-MODEL RIDERSHIP ADJUSTMENTS FOR DESIGN FEATURES & POTENTIAL POLICIES

The model has limitations that SANDAG will update and improve through future efforts, including the lack of a specific APM transit mode and the inability to simulate an airport-like pick-up and drop-off experience. In the interim, the project team estimates that up to 45,000 daily APM boardings and alightings—or greater—could be achieved through a combination of design features and potential policies.

The design features and policies that may increase ridership include, but are not limited to:

---

[1] The SDIA proposed curb space is approximately 9,000 linear feet for both terminals combined, inclusive of arrivals, departures, and shared-ride services (taxis, shuttles, etc.). This equates to approximately 2,700 linear feet of CMH curb space to accommodate 30% of SDIA terminal traffic.
[2] The ADT estimate of 135,000 used in this analysis is from the *SDIA Airport Development Plan Draft EIR (2018),* Appendix H, pg. 5. The subsequent *SDIA Airport Development Plan Recirculated Draft EIR (2019)* revised this total to approximately 129,000.
[3] The SANDAG model does not include specific parameters to simulate an APM transit mode; therefore, in coordination with SANDAG modeling staff, light rail transit is used as a proxy. SANDAG consultants are currently developing additional functionality to better represent an APM transit mode.

- Airport-like pick-up and drop-off experience featuring dual-level roadways, curbside services, and direct connection to the APM station
- Sufficient curb length to accommodate airport-related traffic from multiple vehicle types (private vehicles, taxis, shuttle buses, etc.)
- Policies implementing variable tolling of SDIA driveways, which could divert private vehicles and other modes
- Policies diverting commercial modes to the CMH/APM (taxis, transportation network companies [TNCs], shared vans, courtesy shuttles, and off-airport parking shuttles)
- Policies to improve transit frequencies and connections to increase transit ridership
- Policies to improve active transportation access to the CMH to increase transit ridership
- Policies to improve transportation demand management for SDIA employees, such as a transportation management organization, vanpools, or microtransit to the CMH

These potential policies are not within SANDAG's purview, but are options that stakeholder agencies—including SDCRAA, the City of San Diego, and others—may choose to implement in order to meet the traffic reduction goals discussed above. They are conceptual in nature and are not anticipated to be all-inclusive and/or implemented at one time. A phased approach consistent with travel demand and congestion levels around SDIA could be considered when implementing any of these additional policies and programs. Further coordination with SDCRAA and other stakeholders is needed to determine the feasibility of implementing these policies.

The cumulative effect of shifting passengers to the APM using these potential policies—diversion of taxis, TNCs, shared vans, courtesy shuttles, and off-airport parking shuttles, as well as tolling the SDIA driveways (which would affect private vehicles)—is represented by the sum of these modes shown in Table 2. Implementing all potential policies could shift the majority of passengers to the CMH/APM and exceed the traffic-reduction goal set by stakeholder agencies.

To remain consistent with the stakeholder traffic-reduction goal as well as the CMH pickup/dropoff capacity described above, the project team capped the total daily APM passengers from pickup/dropoff at 40,000,[4] and total APM ridership at approximately 45,000. This includes an allowance of approximately 5,000 APM riders who connect via transit rather than pickup/dropoff, and assumes that policies would be applied cumulatively until the traffic-reduction goal is met.

---

[4] This assumes a passenger load factor of 1.0, or one passenger per vehicle. Data from the *SDIA Airport Development Plan Recirculated Draft EIR* released after publication of SANDAG's *Airport Connectivity Analysis* estimated SDIA load factors to be 1.3 for most vehicles, 2.0 for courtesy shuttles, and 5.0 for shared vans. Applying these updated load factors would increase the potential APM ridership if the CMH were to accommodate the full goal of 30% of SDIA terminal traffic.

Table 2 Mode Share for SDIA Passengers without APM/Light Rail Connection, 2050

Mode	2050 Mode Share for SDIA Passengers	
Private Vehicles	31%	39,057
Rental Car	16%	20,158
Taxi	8%	10,079
TNC	24%	30,238
Shared Van	3%	3,780
Courtesy Shuttle	2%	2,520
Parking Off-Airport (Shuttles)	3%	3,780
Parking On-Airport	8%	10,079
Transit (MTS)	5%	6,299
TOTAL	**100%**	**125,990**

Source: SDCRAA SDIA Airport Development Plan Recirculated Draft EIR (2019), Appendix R-H4, pg. 70.

ESTIMATED AIRPORT TRANSIT MODE SHARE

The trip generation estimate uses the model's transit mode share for trips to/from SDIA to develop vehicular trip generation estimates from ridership estimates. These modeled transit mode shares are 16.8% for Concept 1 and 14.6% for Concept 2, with the remaining passengers arriving via the various modes described in Table 2. The specific airport transit mode share will depend on many factors, including improved regional transit, and further study and modeling is needed to develop a better estimate. Below, the modeled transit mode share results are compared to several other available sources.

The *SDIA Airport Development Plan* estimates a 5% transit mode share in 2050 without construction of an APM or CMH (Table 2). The *SDIA Airport Development Plan* also estimates that a transit mode share of 15% could be achieved if a new transit line (APM or light rail) and airport tolling were implemented.[5]

Data from other U.S. airports served by high-capacity transit indicates that an airport transit mode share of approximately 15% is achievable (without tolling), but this percentage is near the higher end of transit mode shares for U.S. airports. Major U.S. cities with higher densities and extensive transit networks like San Francisco, New York, and Washington D.C. have airport transit mode shares in the 17-23% range. Many smaller cities—with populations and densities similar to San Diego—have achieved 10-15% transit mode shares including New Orleans (15%), Denver (14%), Baltimore (12%), Las Vegas (12%), Orlando (11%), Seattle (11%), and Portland (10%).[6]

VEHICULAR TRIP GENERATION ESTIMATES

Applying the modeled transit mode shares as well as passenger load factors (by mode) and peak-hour factors derived from the *SDIA Airport Development Plan* yields the results in Table 3 and Table 4 (see following page). The tables show the Concept 1 and Concept 2 vehicular trip generation estimates for both the modeled APM ridership and the adjusted APM ridership described above.

Table 3 Vehicular Trip Generation Estimate for Proposed APM, 2050 (Concept 1, Tunnel APM)

User Type	Daily Vehicular Trips	AM Peak Hour (8-9) Inbound	AM Peak Hour (8-9) Outbound	SDIA Peak Hour (9-10) Inbound	SDIA Peak Hour (9-10) Outbound	PM Peak Hour (5-6) Inbound	PM Peak Hour (5-6) Outbound
Concept 1 Modeled Ridership (20,400)	9,700	275	275	300	300	250	250

1 Use SF values were derived from the 15 November 2019 NAVWAR Revitalization Requirements Package
2 Use SF values were derived from confidential data received by the Navy as part of the Request for Interest process conducted in 2018
3 Use SF values were derived from confidential data received by the Navy as part of the Request for Interest process conducted in 2018, the value for Hotel was borrowed from the more detailed SANDAG analysis
4 Use SF values were derived inpart from data presented during a coordination meeting between SANDAG and the Navy on 14 January 2020
5 Use SF values were derived inpart from data presented during a coordination meeting between SANDAG and the Navy on 14 January 2020
6 All Private Development parking stalls are assumed to be 350 SF (8'3"W x 18'L + 24'Aisle) per Tables 142-05K and 142-05L in SD Muni Code Art2 Ch14
7 Residential parking stalls are calculated at a rate of 1.5 space per 1,000 SF, which is the mid-point between Studios and 3-4 Bedroom units per Table 142-05C in SD Muni Code Art2 Ch14
8 To be conservative Office parking stalls are calculated at a rate of 1.5 spaces per 1,000 SF, which is the Minimum Requird Outside a Transit Area for EMX zones per Table 142-05E in SD Muni Code Art2 Ch14
9 Hotel parking stalls are calculated at a rate of 1 space per Room, which is the Minimum Required Inside a Transit Area per Table 142-05G in SD Muni Code Art2 Ch14
10 Retail parking stalls are calculated at a rate of 2.1 space per 1,000 SF, which is the Minimum Required Inside a Transit Area for the CN 1-6, CV 1-2, CC 2-4, CC 3-6, CC 4-6, CC 5-6 zones per Table 142-05E in SD Muni Code Art2 Ch14
11 Transit Center parking stalls are calculated based on 2% of anticipated ridership (Existing Old Town + 25% of Mid-Coast + SANDAG SDIA Tunnel)

Intersection Summary	
HCM 6th Ctrl Delay	27.5
HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	24.3
HCM 6th LOS	C

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

APPENDIX I

HCM 6th LOS	C

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.

Intersection Summary	
HCM 6th Ctrl Delay	25.9
HCM 6th LOS	C

Notes

User approved volume balancing among the lanes for turning movement.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Unsignalized Delay for [NBR] is excluded from calculations of the approach delay and intersection delay.

APPENDIX O

YEAR 2050 WITH ALTERNATIVE 3 FREEWAY ANALYSIS CALCULATION SHEETS
